• Discontinuation of 1984-85 Summer Canada Program	(2.8)
• Miscellaneous	0.2
Net Change:	35.5

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $298.9 million or 13% higher than the 1984-85 Main Estimates of $264.1 million (Extracts from Part II of the Estimates, page 4-4). The difference of $34.8 million reflects the following items.

	($ millions)
• A Supplementary Estimate of $41.3 million provided funding for the following program initiatives:	
- Federal-provincial mineral development agreements	8.8
- Technological enhancements of systems and equipment	13.4
- Resources research and development program	8.1
- Sherbrooke Institute of Cartography	5.0
- Additional costs of operational and accommodation requirements	6.0
	41.3
• Realignment of the Communications Activity's costs to the Administration Program due to approved program activity changes	(4.0)
• Miscellaneous lapses	(2.5)
Net Change:	34.8

B. Recent Performance

1. Highlights

Additional highlights of the Program's performance during 1984-85 include the following:

- The vertical surveys required to compute geodetic values for the International Great Lakes Datum Project were completed.

- The two-year $5 million Canada Centre for Mineral and Energy Technology (CANMET) Short-term Assistance in Research and Technology (START) Program, initiated in March 1983, is proceeding successfully. It helps the Canadian Mineral Industry directly in solving specific short-term problems in production and productivity. Specifically, CANMET reduces costs to industry for use of its special facilities and expertise, where these do not compete with commercial services. Furthermore, CANMET provides R&D contracts to industry in specific areas (e.g., biotechnology, hydrometallurgy, and potash mining). Finally, CANMET strengthens existing efforts to transfer CANMET technology to Canadian industry. For instance, by the end of September 1984, a mobile foundry laboratory had visited 34 foundries in the Atlantic Provinces, Ontario, the Prairie Provinces, Quebec and the West Coast.

- The deep seismic profiling of Phase I of the Canadian Lithoprobe Project was conducted successfully across Vancouver Island and the Kapuskasing structure of the Canadian Shield. Over 200 km of refraction profiling were obtained on Vancouver Island and about 1,500 km of refraction profiling together with 20 km of reflection profiling were gathered across the Kapuskasing structure.

- Investigations have indicated unexpectedly large deposits of polymetallic sulphides on the Juan de Fuca Ridge System. These mineral deposits are being formed now, and understanding the processes involved will lead to better mineral exploration strategies on land.

- Seamarc and Seabeam surveys, in connection with offshore bilateral boundary research, have been successfully carried out over parts of the Juan de Fuca Ridge system; reduction, analysis and publication of data are now in progress.

- The Minister of State (Mines) launched a series of public discussions on the role of the federal government in the minerals and metals sector of the economy.

- Federal-provincial mineral development agreements were negotiated with New Brunswick, Newfoundland, Nova Scotia, and Saskatchewan, and workplans implemented as agreed.

- An industrially managed Asbestos Research Institute was established in Montreal, co-funded by the federal government, the Province of Quebec and the industry.

- Governmental or governmental/industrial missions were completed to the Middle East on asbestos; to the two Germanies, France and Jordan on potash; to Sweden on iron ore; to Brazil on a number of commodities; and to several countries on the copper market.

- A study to determine the prospects and options of the copper and nickel smelters in Canada, and of the lead and zinc smelters in Canada was carried out jointly by the federal and provincial resource and environmental departments, the operating companies, and the labour unions involved.

Following are the highlights of the Program during 1983-84:

- Multiparameter surveys were carried out off the Atlantic and Pacific coasts and the data used to assist in the preparation of updated geological models of these areas. Geological field work in central Ellesmere Island provided valuable information for the petroleum evaluation of the Sverdrup Basin and the study of the structure, evolution and resource potential of the Arctic Basin. The release of the comprehensive report, "Oil and Natural Gas Resources of Canada 1983," resulted from a continuing program to update the estimated discovered and potential resources of the mainland and offshore areas of Canada.

- The survey network was strengthened in coastal areas of the Beaufort Sea using satellite technology. The increased accuracy of the network will enable the petroleum industry to better position its drilling activities in the Beaufort Sea.

- Investigations of the structure, evolution and resource potential of the Arctic Basin during the multi-disciplinary field experiment Canadian Expedition to Study the Alpha Ridge (CESAR), resulted in large quantities of information which are beginning to be published in scientific literature and through symposia in November 1983 and May 1984. Of special interest was a core yielding a record going back 75 million years and showing the Arctic ocean at that time to be warm and full of life.

- Studies of the Northern New Brunswick earthquakes of 1981 were undertaken. The Earth Physics Branch (EPB) collaborated with the Geological Surveys of Canada (GSC), the Atomic Energy

Control Board (AECB), and Ontario Hydro, and undertook the New Brunswick's Department of Natural Resources in other programs to determine geophysical anomalies, ground stresses and how the seismicity relates to the geology.

- The scheduled field work in the Nahanni area was completed as planned, and several reports have been prepared on the co-ordinated geological, geochemical and metallogenetic investigations.

- The first federal-provincial mineral development agreement under an Economic and Regional Development Agreement, and pursuant to the federal Regional Mineral Strategy, was signed with Manitoba.

- A governmental-industrial task force on international market potential was established by Energy, Mines and Resources Canada (EMR) and the Mining Association of Canada which produced reports on the world copper market, on market access for Canadian exporters, and on international financial institutions and their role in financing projects in various countries. In addition, EMR experts conducted a mission to several countries to assess the world nickel market.

- Two successful meetings were held by the six initiating countries (Australia, Canada, the Federal Republic of Germany, France, Japan, and the United States) towards the establishment of an Intergovernmental Nickel Discussion Group.

- Implementation of plans continued for establishing the Coal Research Laboratory at Sydney, N.S., with a full R&D program involving initiatives in underground mine strata control, ventilation, methane emissions and fire control. Several projects involved underground measurements by CANMET staff in co-operation with Cape Breton Development Corporation (CBDC).

- New and retrofit furnace designs have been developed and demonstrated a 20% improvement in the seasonal efficiency of residential oil and gas heating systems.

- The failure of the Land Satellite No.4 (LANDSAT-4) in 1983 delayed the dissemination of high resolution thematic mapper data of Canada until 1984. LANDSAT-5 was successfully launched in March 1984.

- Memorandums of Co-operation were signed with the Province of Alberta and the Maritime Provinces to co-ordinate mapping activities.

- The third edition of "Surveying Offshore Canada Lands for Mineral Resources Development" was published.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)*

	1983-84		
	Actual	Main Estimates	Change
Mineral Industry Development	10,098	10,116	18
Administration of the Canada Explosives Act	1,956	2,192	236
Mineral and Energy Technology	64,124	59,726	(4,398)
Remote Sensing	30,429	29,593	(836)
Geological Surveys	55,353	49,252	(6,101)
Earth Physics	15,007	14,401	(606)
Polar Continental Shelf	5,953	5,675	(278)
Surveying and Mapping	54,562	54,660	98
Minerals and Earth Sciences Public Information	2,663	2,799	136
Program Management and Support	6,080	6,031	(49)
	246,225	234,445	(11,780)

* The Review of 1983-84 Financial Performance figures have been restated to conform with the revised break out by Activity adapted for 1985-86. The difference between actual expenditures and the Main Estimates results mainly from items approved by Supplementary Estimates as explained in Section II -- Analysis by Activity, starting at page 4-25.

C. Background

1. Introduction

The MESP is one of two operational Programs within EMR. This Program has the following responsibilities:

- Promoting, developing and co-ordinating national policies and initiatives for the minerals and metals sector of the Canadian economy.
- Implementing strategies for the development, conservation and use of minerals, in co-operation with provincial governments and the private sector.
- Carrying out scientific and technical surveys to provide the necessary geoscience knowledge base.
- Preparing and publishing maps and charts.

- Conducting research into the occurrence, origin, evaluation, development, and use of minerals (including oil, gas and coal), and on the role, processing, transportation, trade, marketing, environmental impact and economic benefits of minerals located in Canada and elsewhere in the world.

- Providing airborne and satellite remote sensing service for resource management and environmental monitoring.

- Conducting research into geological hazards and constraints to economic development (e.g., earthquakes).

- Producing national mineral statistics, and economic and scientific reports as public information.

- Contributing actively to public and industrial safety by ensuring compliance with the Canada Explosives Act and Regulations.

Science and technology (S&T) activities, performed in-house and by contract to the private sector, constitute the major portion of the resources allocated to this Program. Systematic surveys provide information on Canada's landmass, its contained energy and mineral resources and its sensitivity to geological and man-made hazards. Mission-oriented R&D (in support of mining, mineral processing, metals and fossil fuel industries) includes data-base generation, policy R&D, and protection and productivity technologies. S&T is, therefore, a principal focus of work carried out within the MESP, accounting for approximately 90% of the resources available to the Program. Further information on the nature of these activities can be found in the related schedules in Section II, starting at page 4-25. The remaining resources support the policy, regulatory and advisory roles and information services activities of the MESP, which are also described in Section II.

In addition, this Program provides information and support to other governmental departments through the provision of technical survey data (including satellite and aircraft remote sensing), maps, and economic and scientific studies. Research, technical surveys and the development of policies and programs require close liaison with provincial governments, foreign governments and international organizations.

The Department's other operational Program, the Energy Program, makes extensive use of certain geoscience and research outputs of this Program, in analysis, policy development and regulatory decision-making related to the petroleum and non-petroleum resource sectors of the Canadian economy. Certain R&D activities provide direct support to the energy R&D priorities established by the federal energy programs.

2. Legal Mandate

The legislative framework for the majority of the activities of the MESP can be found in the Department of Energy, Mines and Resources Act and the Resources and Technical Surveys Act.

Under the provisions of these Acts, the Minister is responsible for co-ordinating, promoting and recommending national policies concerning energy, mines, minerals and other non-renewable resources, and for the formulation of plans to conserve, develop and use these resources. In addition, the Minister is authorized to establish scientific laboratories, to conduct research and technical surveys related to the assessment of mineral and energy resources, to prepare and publish maps, and to conduct scientific and economic research related to the mining and metallurgical industries of Canada.

The Canada Explosives Act assigns to the Minister the responsibility for regulating the manufacture, testing, inspection, sale, storage, transportation by road, and importation of explosives throughout Canada. Other acts and instruments administered in whole or in part by the MESP are presented in Section III, page 4-65.

3. Program Objective

The objective of the MESP is to ensure the timely availability of mineral policies, strategies and programs designed to maximize the contribution of the minerals and metals sector to the Canadian economy, and to provide timely scientific knowledge, data, technologies and expertise in the earth- and mineral-related sciences, with emphasis on the mineral and energy resources of the Canadian landmass and offshore areas.

4. Program Organization for Delivery

Activity Structure: The activity structure of the MESP is displayed in Figure 3 on pages 4-16 and 4-17. Details of the Program structure below the Activity level are included in Section II, Analysis by Activity, starting on page 4-25. It should be noted that the former Activities of Minerals Technology and Energy Technology have been combined into the Mineral and Energy Technology Activity.

Organizational Structure: The MESP is composed of three major Sectors: Mineral Policy, Research and Technology, and Earth Sciences. The three Sectors report, through their respective Assistant Deputy Ministers (ADMs), to the Deputy Minister. Figure 3 (pages 4-16 and 4-17) sets out the organization and the relationship between the Activities of the Program.

The Mineral Policy Sector proposes policies and strategies to ensure that the minerals and metals sector makes a maximum contribution to the economic well-being of Canada. In support of this objective, it undertakes assessments of Canadian and world supply of, and demand for,

minerals and metals; organizes and undertakes technical and economic market missions of industry and governmental membership in support of market development; liaises with foreign governments on mineral and metal matters; leads the development and negotiation of agreements on mineral development with the provincial governments; and manages the federal-provincial mineral development agreements program of the Department.

The Research and Technology Sector includes the Canada Centre for Mineral and Energy Technology (CANMET), the Canada Centre for Remote Sensing (CCRS) and the Explosives Branch. CANMET leads and co-ordinates federal research efforts in mining, mineral processing, metals and energy from fossil fuels. CCRS develops and demonstrates systems to acquire and disseminate remote sensing data from aircraft and satellites. The Explosives Branch regulates the manufacture, storage and sale of explosives.

The Earth Sciences Sector is composed of the Geological Survey of Canada, Earth Physics Branch, Surveys and Mapping Branch, and Polar Continental Shelf Branch. The Sector is responsible for ensuring the availability of comprehensive geoscientific knowledge related to the mineral and energy resources of Canada, providing fundamental survey networks, preparing and publishing maps, regulating surveys of Canada Lands, providing knowledge and information concerning geological hazards (e.g., earthquakes) and the Earth's dynamic processes, and providing logistical support to scientific investigations in the Arctic.

D. Planning Perspective and Performance Review

1. Environment

Canada has traditionally had a resource-based economy, with one of the largest components being the minerals and metals sector. In 1983, the value of the production of the sector (including the production of non-energy mining, refined metals, and minerals in fabricated form) was $40.4 billion, or 10% of Canada's Gross National Product. According to the latest "Corporations and Labour Unions Returns Act Report (1980)," the sector was composed of 12,863 firms of which 4,814 were engaged in exploration and mining, 355 in the production of primary metals and metal forms, and 7,694 in metallic or non-metallic mineral fabrication. The Canadian minerals and metals sector is responsible for approximately 20% of the value of Canada's annual exports of goods and services. The most export-oriented component of the sector is the mining industry, which exports approximately 80% of its annual production. Some 175 Canadian communities are dependent on mining for their livelihood.

Federal Energy Programs: The federal energy programs have a significant impact on the priorities and activities of the MESP. In particular, the goal of energy self-sufficiency is placing very heavy demands on the Department's scientific organizations. There is a pressing need to acquire an integrated geoscience knowledge base for the frontier areas,

such as Northern Canada and the Eastern Continental Shelf, and the technology to facilitate resource exploitation. Indeed, knowledge of the Canadian landmass, both onshore and offshore, and solutions to technological problems are prerequisites for exploration, extraction, processing, utilization, conservation and management of mineral and fossil fuel resources.

Economic Climate: Excess capacity to produce most minerals is the rule throughout the world with the consequence that while demand has improved considerably since 1982, the price being obtained remains depressed when expressed in U.S. dollars. Since virtually all mineral prices are quoted in U.S. dollars, the prices obtained by Canadian producers in 1984 are below prices obtained in the 1930s when inflation was removed.

At the same time, the value of the U.S. dollar, relative to all other currencies, has continued to rise, rendering the price for Canadian minerals - when expressed in the local currency - the highest they have been in years (e.g., in June 1984 one of the London trade papers carried a banner headline that copper had reached a nine-year high). Currency movements have thus priced some Canadian-produced minerals out of their traditional uses, environmental concerns and energy efficiency arguments have displaced other uses.

In the face of these uncertainties, it is clear that all measures which can be taken to improve market access, to find new applications or markets, or to reduce the costs of producing minerals and metals, are not only desirable, but necessary.

2. Initiatives

Tailings Management: At the request of industry, work on the development of methods for the minimization of environmental impact from non-uranium mine/mill wastes will be undertaken by CANMET. Although some of the results available from CANMET's National Uranium Tailings Research Program will be applicable, major differences exist which will need to be covered separately. CANMET's role will consist of demonstrating and evaluating methods for treating the tailings and the tailings pile surfaces, for monitoring their effectiveness, and identifying and evaluating the reasons for the escape of environmental contaminants. Base metal and other mine/mill tailings are extensive throughout Canada. Those with potential for acid generation are potash tailings (mainly sodium chloride) and gold mine tailings containing residual cyanide and cyanide complexes. They must all be addressed over the long term. In 1985-86, CANMET will fund this research at the level of $841,000 and 14 P-Y.

Federal-Provincial Agreements: Given the economic climate and the reorganization and reorientation of this Program, launched in November 1984, the principal initiative to be undertaken during the fiscal year 1985-86 will be to more fully develop the machinery to obtain consensus with the provincial governments, the corporate leaders and labour leaders

on mineral development strategies and program proposals, and to extend the federal-provincial mineral development agreement program to all provinces where it is desirable and effective.

Through the initiative of federal-provincial mineral development agreements, CANMET has become involved in a series of projects touching the needs of the different provinces. Projects under the Mining and Mineral Technology programs of the agreements include ground control research, research on improved underground safety communication systems, sulphur dioxide reduction in the extraction of metals, application of the ferric chloride leach process to complex sulphide ores and technical evaluation of metallic and industrial minerals deposits. In 1985-86, federal-provincial agreements at CANMET will involve $3.6 million in funding. Over the life of these agreements, total expenditures at CANMET are anticipated to be $12.9 million.

3. Update on Previously Reported Initiatives

Remote Sensing: In 1983-84, Canada's participation in the European Space Agency's remote sensing satellite (the Earth Resources Satellite) (ERS-1) program continued; the economic and technical studies for the Mission Requirement Phase of RADARSAT (Phase A of a research and development project on radar satellite imagery systems) were completed; a $10 million, 31-month contract was awarded to MacDonald Dettwiler and Associates Ltd. of Richmond, B.C., to develop a data processing system to improve the precision of remotely sensed imagery. In 1983-84, $10.3 million (out of $10.1 million budgeted in Main and in Supplementary Estimates) and all person-years were spent for these purposes.

Uranium Tailings Research: The first full year of operation for this 5-year program began in 1983-84. Resources used were $1.1 million (of $1.6 million budgeted) and 7 person-years (7 budgeted). The underexpenditure was due to the need to carefully assimilate earlier research so that the long-term program could be designed efficiently, and to get the extensive contracted out research under way. As a result, a detailed 5-year plan of research in measurement of field data, modelling for long-term prediction and review of disposal technologies was commenced. A Technical Advisory Committee of industry, provinces and regulatory agencies was established. The 5-year program was placed on a sound footing.

Cape Breton Laboratory: Following approval on July 15, 1982, staffing of the Laboratory commenced. Resources used in 1983-84 were $1.2 million (out of $1.1 million budgeted) and 11 person-years (12 budgeted). An old building, partly refurbished, was occupied, and scientists initiated joint underground health and safety projects with Cape Breton Development Corporation (CBDC) related to gassy atmospheres, methane control and prevention of machinery ignition. The foundations of a new research laboratory were established, and the essential linkages and co-operation with Labour Canada and CBDC in its coal mines to achieve practical research were begun.

Digital Printing: The Surveys and Mapping Branch acquired equipment capable of converting existing maps to digital form and incorporating this data in the national data base. During the fiscal year 1984-85, engineering and installation were completed and the system was put into operation. The cost of conversion equipment was $2.5 million, as forecast.

4. Program Effectiveness

The R&D activities of the MESP do not easily lend themselves to the traditional methods of performance measurement, due to the uncertainty in the amount and complexity of the work required to meet the established objectives. As an alternative to quantified performance indicators, the effectiveness of R&D efforts is established by formal internal and external reviews.

In the last 36 months, the Earth Sciences Sector has been subjected to an A-Base review by the Treasury Board (TB), an audit by the Office of the Comptroller General (OCG), an internal audit and several external reviews conducted by consultants and review committees of the Canadian Geoscience Council. The majority of these audits and reviews focused on management and operational procedures, and recommendations have all been implemented. The A-Base review recommended a review of a broad range of policy questions. These questions were dealt with by Ministers as part of the decision to relocate the Surveys and Mapping Branch to Sherbrooke, Que., and in the approval by Cabinet, in spring 1984, of the mission, priorities and program of the Earth Sciences Sector.

In addition to the above-noted general indicators of effectiveness, and to ongoing performance measurement carried out by departmental managers, EMR is currently implementing a full-scale Program Evaluation Plan covering separate components of the MESP. This evaluation, which is administered through the Program Evaluation Branch, permits a deeper, albeit periodic, examination of the relevance, effectiveness and impact of individual departmental programs.

Internal Reviews: Peer reviews by highly qualified scientists and management reviews by science managers at the branch and sector levels are carried out under the direction of the appropriate ADM on an established schedule.

Formal departmental evaluations of all components of the Department's Programs, including the MESP, are carried out for the Associate Deputy Minister by the Program Evaluation Branch and conform to the Department's Long-Term Plan for Program Evaluation. Two recently completed evaluations in the MESP are for the Mineral Industry Development and the Remote Sensing Activities, and the recommendations made in the evaluations are in the process of being implemented.

In the Mineral Industry Development Activity steps are being taken to improve communication with the various users and potential users of

the mineral publications, to review the contents of the publications and to improve the accuracy of statistics. The recommendations of the program evaluation study on federal-provincial agreements are being implemented in the new economic and regional development agreements, with particular attention being paid to clarifying objectives; identifying indicators of objective achievements; establishing responsibility for the evaluation of such agreements; ensuring the evaluations comply with accepted federal practices; and developing effective communication plans.

In the Remote Sensing activity, resources allocated to applications development have been significantly increased; negotiations with the National Aeronautics and Space Administration (NASA) for the inclusion of visual and infrared sensors are proceeding; and plans to establish technology transfer programs are well advanced in Saskatchewan and are progressing well in Newfoundland.

It is anticipated that the evaluation of the Earth Physics Activity will be completed in 1984-85, thus completing the first cycle of departmental evaluations in the MESP.

External Reviews: External evaluations on the effectiveness of mineral policies and R&D are provided through a variety of advisory committees for the various policy and research areas. Reviews of current efforts and recommendations on future directions and priorities are made by these committees, which include the following:

- The National Advisory Committee on the Mining Industry meets, at the Minister's request, to discuss all federal policy or program issues of mutual concern. Members are chief executive officers or senior operating executives, representing all components of the industrial sector and all regions of the country.

- The National Advisory Committee on Mining and Metallurgical Research is composed of senior personnel from industry, universities and provincial governments who, annually, review the research program associated with mineral and energy development activities and advise the Minister on the economy, efficiency and effectiveness of the R&D program.

- The Canadian Advisory Committee on Remote Sensing is an extensive body of working groups representing industry and universities, as well as provincial and territorial governments. It provides external evaluations of the Department's remote sensing research activities to the Inter-Agency Committee on Remote Sensing.

- Two review committees of the Canadian Geoscience Council have completed their examination of the Mineral Deposits Research and the projects within the Quaternary and Engineering Geology Division of the Geological Survey of Canada. These committees

are composed of members from industry, universities and provincial agencies. Review of their reports prior to publication will be completed during 1985-86.

- The Independent Industrial Advisory Committee on Earth Sciences advises the Deputy Minister on major issues which relate to the responsibilities of the Earth Sciences Sector and to the needs of the petroleum and mineral exploration industries and other resource development industries. Members of the Committee are senior officials in these industries.

- Since 1978, seven ad hoc visiting committees composed of university, industrial and scientific peers have examined, thoroughly and critically, areas covering nearly all of the financial and human resources of the Earth Physics Activity. This procedure has been formalized with the appointment of a permanent visiting committee under the auspices of the Canadian Geoscience Council (CGC).

- The National Advisory Committee on Control Surveys and Mapping is composed of senior personnel from federal and provincial governments, educational institutions, and industry who advise the Minister on the co-ordination of federal surveying and mapping programs and on the promotion and co-ordination of related research and educational measures.

Section II
Analysis by Activity

A. Mineral Industry Development

Objective

To establish policies and strategies to ensure that the minerals and metals sector makes a maximum contribution to the economic well-being in Canada, and that the effective use of these resources is encouraged; to advise on the implications of international mineral development; and to assess the economic, social, fiscal, corporate, regional and environmental impacts of alternative policies and strategies.

Resource Summary

This Activity accounts for approximately 4% of the total Program expenditures and approximately 5% of the total person-years. A more detailed breakdown of resources is given in Figure 4.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Policy and Program Development	1,826	34	1,782	36	2,867	7
Minerals and Metals Strategy	6,839	54	5,646	43	3,471	41
Resource Strategy and Information	2,465	41	2,364	44	2,073	54
Economic and Financial Policy Analysis	1,236	16	1,148	16	916	17
Activity Management and Support	1,496	20	1,183	15	771	16
	13,862	165	12,123	154	10,098	135

Of the total expenditures, 58% is for personnel costs and 42% for all other operating expenditure items.

Past Financial Performance

Figure 5 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 5: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Policy and Program Development	2,867	2,877	10
Minerals and Metals Strategy	3,471	3,487	16
Resource Strategy and Information	2,073	2,040	(33)
Economic and Financial Policy Analysis	916	928	12
Activity Management and Support	771	784	13
	10,098	10,116	18

Explanation of Change: There were no significant changes between the actual and planned financial requirements. The lapses were used to fund other minor requirements within the Program.

Description

The Constitution Act 1982 confirms provincial ownership of mineral resources. There is a co-ordinating role in the mining and minerals sectors that has been assigned to the federal government and EMR, which is explained in the Resources and Technical Surveys (RTS) Act and the Government Organization Act of 1983. The Department exercises a policy and advisory role with other governmental departments and the industry in domestic and international mineral supply and demand matters.

The Department develops perspectives on international markets for minerals and metals and their products and technologies, develops, and where appropriate, leads governmental or governmental/industrial missions (generally including labour representation) to potential (or actual) client nations or to competitive nations, for market development or educative purposes. The Department develops, negotiates, manages and provides technical advice on federal-provincial mineral development agreements, and it plays a general advisory role with the mining and minerals industries through its counsel and publications. EMR is the source of "Canada's National Mineral Statistics," used and published by Statistics Canada, and is the principal advisor to Revenue Canada — Taxation and to Revenue Canada -- Customs and Excise on mineral matters.

Performance Information/Resource Justification

The resources allocated to this Activity are organized to produce policy and strategy proposals on various aspects of the Canadian minerals and metals sector, to provide economic, fiscal, strategic preparedness, human affairs, and other policy advice as required, and to co-ordinate (and

where appropriate, lead) the activities of Canadian public and private sector participants in the world minerals and metals markets.

The resource justification of this Activity is described below in terms of the principal expected outputs of the organization for fiscal year 1985-86.

As a result of preliminary discussions with industry and External Affairs Canada, a major governmental/industrial mission to the People's Republic of China will be completed during the fiscal year. The objective of the mission will be market development and will cover improved government-to-government relations on nonferrous metal issues, the use of Canadian technology in mining and processing, and Canada as a source of nonferrous metals and metal products for China.

Before the end of fiscal year 1985-86, EMR will lead a market development mission of Canadian asbestos and asbestos product producers to the world's most rapidly growing market for asbestos and its products, the Far East. Malaysia and Japan represent large and growing markets, but India is by far the market with the greatest potential as a consumer of Canadian asbestos. This potential can be realized only if governmental officials and the general public understand the environmentally-sound uses for asbestos, and if Canada can clearly demonstrate that technology exists to ensure the elimination of any health hazard.

Pursuing a strategy of carrying out a major study of the world market (involving producers and consumers) for one of Canada's principal minerals each year, lead and zinc will be undertaken during 1985-86. The purpose of these studies (i.e., copper in 1984-85, nickel in 1983-84) is to clarify, by on-site visits, the conditions of production facilities, production technology and problems, and market problems as seen from the perspective of Canada's clients and competitors; to share these findings, to the extent possible, with Canadian producers; and to render more realistic the assessment of Canada's policy options.

A multi-year analysis of the Canadian and foreign tax systems with respect to mineral production and processing was launched during 1983-84 to assess the economic impact of governmental fiscal policies on the competitiveness of the Canadian minerals and metals sector. Before the end of fiscal year 1985-86, the first of the analytical reports stemming from this study should be published and conclusions on the appropriateness of mineral tax systems in Canada should be produced.

Before the end of 1985-86, it is expected that the group of 31 countries (representing 95% of production and 92% of consumption of nickel) will be able to come to terms on the principles of a charter and terms of reference for the establishment of an International Nickel Discussion Group to help improve information on the nickel market and reduce the cyclical nature which has plagued the world industry in the past several years.

Given the degree of acceptance of the concept of an international discussion group for stabilizing the world nickel market, efforts to launch similar discussion groups to address the problems of the world copper and asbestos markets will be accelerated and preliminary meetings of interested countries will be held prior to the end of the fiscal year.

After several years of research and consultation with industry, provincial governments, and labour representatives, a set of options for Canadians for the future development and use of Canada's abundant (although not necessarily economic) iron ore will be produced for consideration and for consensus building during 1985-86.

During fiscal year 1985-86, the development of, and negotiations with respect to the establishment of mineral development agreements with the Provinces of British Columbia, Ontario, Prince Edward Island, and Quebec will be completed. Programs included in the existing agreements with Manitoba, New Brunswick, Newfoundland, Nova Scotia, and Saskatchewan will be carried out as planned.

Before the end of the fiscal year, the terms and parameters required to launch pilot projects leading to the establishment of a National Mines Accident Data Bank will be completed, and projects will be launched in Alberta, and Ontario, and possibly in British Columbia or Quebec.

While a number of details (including funding) remain to be clarified at the start of 1985-86, it is expected that two major projects to improve productivity and service to the public will be undertaken. The first initiative is the development of a proposal for the installation of a computer system for processing and accessing Canada's National Mineral Statistics for use by Canadians, the United Nations, the Organization for Economic Co-operation and Development, and other international institutions. The second project, designed specifically to address the productivity of individuals in the Activity is the installation of office automation equipment and procedures in areas and on topics where these procedures have been proven effective elsewhere.

To build consensus with all the parties interested in the development of the minerals and metals sector of the Canadian economy, the Department will conduct consultations through the Interdepartmental Committee on Minerals (ICOM) with a number of federal agencies, and through the Intergovernmental Working Group (IGWG) on the Mineral Industry with the provinces and territories. In addition, departmental officials will continue to work with private sector representatives through the Mining Association of Canada--EMR Task Force and its various sub-committees to identify and clarify policy issues and needs, in the Canadian context. Such consultations are carried out with business and labour groups, as well as with academics and independent researchers.

B. Administration of the Canada Explosives Act

Objective

To contribute actively to public and industrial safety, by ensuring compliance with the Canada Explosives Act and Regulations.

Resource Summary

This Activity accounts for approximately 1% of the total Program expenditures and approximately 1% of the total person-years. A more detailed breakdown of resources is given in Figure 6.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Licensing, Inspection and Authorization	855	14	851	14	426	13
Explosives Testing and Research	685	14	644	14	553	12
Activity Management and Support	575	16	519	16	977	16
	2,115	44	2,014	44	1,956	41

Of the total expenditures, 84% is for personnel costs and 16% for all other operating expenditure items.

Past Financial Performance

Figure 7 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 7: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Licensing, Inspection and Authorization	426	660	234
Explosives Testing and Research	553	554	1
Activity Management and Support	977	978	1
	1,956	2,192	236

Explanation of Change: There were no significant changes between the actual and planned financial requirements. The lapses were used to fund other minor requirements within the Program.

Description

The Administration of the Canada Explosives Act Activity entails regulating, throughout Canada, the manufacture, importation, storage, sale and transportation by road of explosives by inspecting and licensing factories, magazines and road vehicles, by testing and authorizing explosives, by providing technical advice to other governmental agencies (international, federal and provincial), and by providing training courses on explosives safety.

The licensing and inspection tasks are carried out by the Ottawa Headquarters and five regional offices located in: Halifax, N.S.; Sillery, Que.; Ottawa, Ont.; Calgary, Alta.; and Vancouver, B.C. The testing, authorization, research and development are performed by the Canadian Explosives Research Laboratory of the Canada Centre for Mineral and Energy Technology (CANMET), which is located at the Bells Corners complex in the National Capital Region.

The inspection program is reinforced by the Royal Canadian Mounted Police in their role as Deputy Inspectors of Explosives.

Performance Information/Resource Justification

Figure 8 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 8: Administration of the Canada Explosives Act

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Licensing, Inspection and Authorization	855	14	To process all applications for licensing factories, magazines, trucks, and importations; to carry out inspections; and to assess all requests for the authorization of explosives.	- Monitoring the effectiveness of the licensing procedures by inspecting 100% of licensed factories, 40% of magazines and 10% of road vehicles. - Inspecting a varying number of trucks without permits and unlicensed storage facilities. - Conducting training courses for fireworks supervisors, military and police agencies, construction safety organizations, colleges and other governmental departments. - Conducting an on-going review of all regulations and ensuring they reflect current technology and legislation.
2. Explosives Testing and Research	685	14	To test designated explosives manufactured in or imported into Canada for authorization under the Act; and to carry out related research	- Confirming the safety characteristics of explosives samples submitted for authorization or for continued authorization. - Characterizing the safety properties of new emulsion explosives.

C. Mineral and Energy Technology

Objective

To ensure the availability to Canada of optimum technology for the extraction, processing and utilization of mineral and energy resources.

Resource Summary

This Activity accounts for approximately 23% of the total Program expenditures and approximately 25% of the total person-years. A more detailed breakdown of resources is given in Figure 9.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Mining	**7,553**	**69**	8,502	70	5,066	73
Coal Mining and Preparation	**6,168**	**58**	6,931	58	5,250	55
Mineral Processing	**18,153**	**192**	16,383	189	13,189	189
Fuels Technology	**27,199**	**178**	25,365	178	21,058	176
Metals and Materials	**10,097**	**142**	10,603	142	10,618	139
Technology Information Services	**2,458**	**36**	2,388	36	2,292	36
Technical Services	**2,893**	**61**	2,789	61	2,973	63
Activity Management and Support	**3,791**	**53**	3,678	51	3,678	51
	78,312	**789**	76,639	785	64,124	782

Of the total expenditures, 43% is for personnel costs, 13% for capital and 44% for all other operating expenditure items.

Past Financial Performance

Figure 10 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 10: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Mining	5,066	4,656	**(410)**
Coal Mining and Preparation	5,250	5,025	**(225)**
Mineral Processing	13,189	12,427	**(762)**
Fuels Technology	21,058	20,163	**(895)**
Metals and Materials	10,618	10,082	**(536)**
Technology Information Services	2,292	1,801	**(491)**
Technical Services	2,973	2,740	**(233)**
Activity Management and Support	3,678	2,832	**(846)**
	64,124	59,726	**(4,398)**

Explanation of Change: The net change is due to the following major program additions approved in 1983-84 Supplementary Estimates: additional Energy R&D ($2.3 million), and Research and Technology assistance to the mining, minerals and metals industry ($2.7 million) and minor program lapses.

Description

The Mineral and Energy Technology Activity is responsible for conducting research and engineering development in mineral and energy technology, including mining, mineral extraction and processing, metallurgy, utilization of metals and materials and the supply, conversion and utilization of heavy oil, oil sands, coal, uranium and other fuels together with selected areas of energy conservation and energy fuels transportation; promoting, co-ordinating and supporting R&D in industry, universities and research institutes in the mineral and energy fields; identifying technological opportunities in mining, metallurgy, and in energy, and transferring technology to the private sector.

These tasks are performed by the Canada Centre for Mineral and Energy Technology (CANMET) through in-house resources and contracts with the private sector. The goals of CANMET are to ensure that advanced technology is available for Canadian industry to meet the national requirements for extraction, processing and utilization of mineral and energy resources; to provide the technical knowledge necessary to formulate mineral policy; and to facilitate the efficient exploitation of Canada's mineral resources. In the National Capital Region, CANMET laboratories respond to R&D objectives in mining technology; resource assessment; mineral processing; environmental technology; materials development; metals processing; standards and specifications; bitumen, heavy oil and synthetic crude oil upgrading; coal preparation, combustion, gasification and liquefaction; improvements to domestic gas heating

furnaces; processing of radioactive ores; and developing steels for petro-chemical processing, oil and gas pipelines and offshore structures. Intimately associated with the quest for technological efficiency are the commitments to enhance the occupational health and safety aspects of industrial workers and to improve the environment in areas of the country adversely affected by uncontrolled industrial emission and ineffective waste management.

CANMET has established regional research laboratories. A Mining Research Laboratory, located at Elliot Lake, Ont., focuses on rock stability and health and safety issues in underground hard rock mining. Coal Research Laboratories in Calgary, Alta., and Sydney, N.S., perform R&D on mine productivity and health and safety in surface and underground coal mining. A fourth laboratory in Devon, Alta., concentrates on coal preparation, waste clean-up and cokemaking as well as colloid and surface chemistry of heavy oil recovery processes.

Performance Information/Resource Justification

The effectiveness of the Activity is reviewed by the National Advisory Committee on Mining and Metallurgical Research. See Section I, Program Effectiveness, page 4-23.

Figure 11 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 11: Mineral and Energy Technology

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Mining	7,553	69	To develop technology to assist the Canadian mining industry to improve mining methods; to measure and control health and safety hazards associated with mines; and to provide policy support.	- Developing a summary of mining productivity indices for various mining methods. - Providing guidelines for rock bolting in hard rock. - Demonstrating diesel exhaust toxicity reduction devices in underground mines, in collaboration with the U.S. Bureau of Mines and the Ontario Ministry of Labour. - Contributing, through federal-provincial agreements, to mining technology, specifically ground control research and underground safety communications.
2. Coal Mining and Preparation	6,168	58	To develop technology to assist the Canadian coal industry to improve coal mining and preparation methods; to measure and control health and safety hazards associated with coal mines; and to provide policy support.	- Investigating and comparing the rock/support interactions in machine bored and in drill-and-blast tunnels in the Sydney coal field. - Evaluating the performance of a comprehensive mine atmosphere monitoring system being demonstrated underground in Western Canada. - Demonstrating improved coal preparation effluent treatment and fine coal cleaning through the use of mobile coal preparation pilot plants. - Completing an investigation of coal preparation R&D needs for Eastern Canadian coals.

Figure 11: Mineral and Energy Technology (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
3. Mineral Processing	18,153	192	To develop technology to assist Canadian industry in the assessment, and more efficient extraction and refining, of mineral resources; to minimize energy consumption and environmental impact in mineral processing; and to provide policy support.	- Producing and disseminating mineralogical reports on the characteristics of selected zinc/lead/copper deposits in the Bathurst area of New Brunswick. - Transferring to industry an easily usable computer software package that will permit the modelling and simulation of ore and coal processing. - Developing a hydrogen-conducting ceramic electrolyte for energy conversion devices. - Contributing to the management of mine/mill wastes. - Contributing, through federal-provincial agreements, to mineral processing technology, specifically, studies to reduce the amount of sulphur dioxide produced during the extraction of metals and the application of the ferric chloride leach process to complex sulphide ores. - Initiating underground bacterially-assisted leaching trials of a base metal ore in a Canadian mine.
4. Fuels Technology	27,199	178	To develop technology to optimize the utilization of Canadian fossil fuels in an environmentally-acceptable manner; to produce synthetic fuels from non-conventional sources; to integrate synthetic fuels into the end-use system; and to provide policy support.	- Continuing comprehensive pilot-plant studies in support of the Petro-Canada 800m^3/d commercialization demonstration of the CANMET hydrocracking process. - Participating with Alberta Oil Sands Technology and Research Authority (AOSTRA) and industry in the establishment of an Oil Sands Extraction Demonstration Centre in the vicinity of Fort McMurray, Alta. - Demonstrating and evaluating commercial atmospheric fluidized-bed combustion boiler technology for burning high-sulphur coal, with respect to both technical performance and economics, in a typical heating plant application at CFB Summerside, P.E.I. - Conducting and reporting on an industrial-scale demonstration of acid rain abatement technology at the heating plant at CFB Gagetown, N.B. - Continuing bench scale and pilot plant studies to evaluate Canadian coals for co-processing with bitumens, heavy oils and residuals to provide technical criteria necessary for scale-up and demonstration operations.

Figure 11: Mineral and Energy Technology (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
5. Metals and Materials	10,097	142	To develop technology to enhance Canadian capability and efficiency in the production, fabrication and utilization of metals and materials; to increase the competitiveness and reliability of products; and to provide policy support.	- Contributing to welding and inspection technology to assist Canadian fabricators of pressure vessels and offshore structures to upgrade their capabilities. - Evaluating alloys in a fluidized-bed coal combustor. - Using a mobile laboratory to carry out on-site foundry tests, to enable upgrading of the technology of Canadian foundries. - Defining metallurgical parameters that will assist Canadian steelmakers to develop a high-strength low-alloy steel competitive with the X-80 grade steels available from foreign sources. - Participating with COGLA and other Canadian organizations in the preparation of standards for materials (steels and concretes) used in construction of Canadian offshore structures.
6. Technology Information Services	2,458	36	To acquire, process and disseminate scientific and technical information in support of the Mineral and Energy Technology Activity and to maintain a comprehensive national collection of pertinent mineral and energy technology literature to assist government, industry and university personnel and interested members of the general public with technical information.	- Processing, printing and distributing about 450 current CANMET publications. - Preparing 5,000 abstracts for addition to the four in-house data bases. - Acquiring and processing 4,000 new items for the library's collection. - Responding to requests for information and reference.
7. Technical Services	2,893	61	To provide effective engineering, technical and operational services and associated facilities to support departmental activities.	- Designing and developing prototype R&D apparatus and equipment. - Installing laboratory and pilot-scale equipment for either new and/or expanded R&D facilities. - Maintaining and repairing installed R&D equipment and the associated facilities.

D. Remote Sensing

Objective

To improve remote sensing technology; to facilitate the acquisition and dissemination of remotely sensed data and derived information needed for the management of Canadian natural resources and for the monitoring of human activity; and to assist the development of the Canadian remote sensing industry.

Resource Summary

This Activity accounts for approximately 17% of the total Program expenditures and approximately 5% of the total person-years. A more detailed breakdown of resources is given in Figure 12.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Satellite Data	42,521	51	24,568	50	17,357	40
Airborne Program	5,388	22	5,361	24	4,952	26
Data Applications	2,859	15	2,582	15	2,977	15
Application Services and Technology Transfer	1,076	9	935	9	1,076	12
Activity Management and Support	4,542	58	4,031	57	4,067	31
	56,386	155	37,477	155	30,429	124

Of the total expenditures, 13% is for personnel costs, 32% for capital and 55% for all other operating expenditure items.

Past Financial Performance

Figure 13 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 13: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Satellite Data	17,357	17,855	498
Airborne Program	4,952	5,187	235
Data Applications	2,977	2,634	(343)
Application Services and Technology Transfer	1,076	978	(98)
Activity Management and Support	4,067	2,939	(1,128)
	30,429	29,593	(836)

Explanation of Change: There were no significant changes between the actual and planned financial requirements. The minor differences were funded through reallocations.

Description

The Remote Sensing Activity includes the reception, processing, archiving and dissemination of data from remote sensing satellites; the provision of airborne remote sensing data for research and demonstration projects; the development of the full range of satellite and airborne remote sensing technology from sensor to image analysis systems; the transfer of resulting technology to Canadian industry; the support of technology and applications of R&D by industry, universities and other governmental agencies; and the provision of technical and professional assistance to operational users of remote sensing for resource management and environmental monitoring.

These tasks are performed by the Canada Centre for Remote Sensing (CCRS) which operates: a receiving station at Prince Albert, Sask., to receive data from the land satellite (LANDSAT) and National Oceanic and Atmospheric Administration (NOAA) remote sensing satellite; a Falcon jet aircraft to simulate data from future satellite sensors, a Convair-580 that carries an imaging radar system for all-weather operations and a DC-3 for low-level applications and sensor development; and computer facilities and image analysis laboratories in Ottawa to support technological and applications development. CCRS scientists and engineers provide consulting services to, and participate in, joint projects with resource management agencies and private sector users of remote sensing data. Most of the technology is developed through close co-operation with Canadian industry, leading to world level competence in ground station, image analysis and radar processing technologies.

EMR, in conjunction with Environment Canada and Communications Canada, has undertaken an extensive R&D program to define mission

requirements for an imaging radar satellite (RADARSAT) system and to establish technological competence in Canadian industry for the space and ground components of this system, primarily aimed at sea-ice and sea-state applications.

Performance Information/Resource Justification

The effectiveness of the Activity is reviewed by the Canadian Advisory Committee on Remote Sensing. (See Section I, Program Effectiveness, page 4-23.)

Figure 14 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 14: Remote Sensing

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Satellite Data	42,521	51	To ensure the timely availability of remotely sensed data from satellites for resource management and environmental monitoring.	- Installing facilities to receive and process data from France's remote sensing satellite (SPOT). - Completing economic and engineering studies for the system definition phase of the RADARSAT program.
2. Airborne Program	5,388	22	To establish and demonstrate improved airborne remote sensing technologies for resource management and environmental monitoring.	- Commissioning a C-Band Synthetic Aperture Radar (SAR) in the Convair-580 aircraft for RADARSAT program studies. - Maintaining the capability to provide three aircraft for remote sensing applications/technology development projects, as well as for commercial use through leasing.
3. Data Applications	2,859	15	To establish and demonstrate improved remote sensing information extraction techniques and systems, as well as to develop and demonstrate practical applications of remotely sensed data to resource management and environmental monitoring problems.	- Developing National Oceanic and Atmospheric Administration (NOAA) satellite imagery enhancements for crop vigour assessment. - Developing enhanced Thematic Mapper imagery for forestry applications.
4. Application Services and Technology Transfer	1,076	9	To provide analysis facilities as well as information and advisory services to assist users in applying remote sensing technology to resource management problems; to increase the operational use of remote sensing data through technology transfer to resource management agencies; and to provide Canadian industry with technical assistance to facilitate the development of remote sensing products and services for domestic export markets.	- Providing image analysis facilities and consulting services for remote sensing applications development projects. - Implementing technology transfer projects with resource management agencies of the Maritime Provinces, and introducing a new technology transfer program in one more province. - Providing the Canadian remote sensing industry with assistance in the form of training programs, appropriate airborne campaigns and technical liaison to facilitate domestic and export market development.

E. Geological Surveys

Objective

To ensure the availability of comprehensive knowledge, technology and expertise pertaining to the geology of the Canadian landmass and offshore areas, including mineral and energy resources and conditions affecting land and seabed use, as required for effective exploitation of mineral and energy resources, effective use of land, estimation of the resource base of Canada, and formulation of policies.

Resource Summary

This Activity accounts for approximately 26% of the total Program expenditures and approximately 26% of the total person-years. A more detailed breakdown of resources is given in Figure 15.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Cordilleran Geology	4,756	49	4,155	54	3,405	49
Sedimentary and Petroleum Geology	16,594	161	16,595	155	11,579	146
Precambrian Geology	6,711	79	6,282	93	4,562	74
Atlantic Geoscience	19,929	121	17,127	116	9,444	110
Terrain Sciences	5,182	72	4,538	77	3,877	68

	86,209	836	77,441	845	55,353	801

Of the total expenditures, 45% is for personnel costs, 49% for operations and maintenance and 6% for capital costs. R&D accounts for 70% of total expenditures, and technical and administrative support for 30%.

Past Financial Performance

Figure 16 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 16: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Cordilleran Geology	3,405	3,150	**(255)**
Sedimentary and Petroleum Geology	11,579	10,109	**(1,470)**
Precambrian Geology	4,562	4,859	**297**
Atlantic Geoscience	9,444	7,694	**(1,750)**
Terrain Sciences	3,877	3,418	**(459)**
Economic Geology and Mineralogy	5,478	5,424	**(54)**
Resource Geophysics and Geochemistry	8,128	8,037	**(91)**
Geological Information	4,588	4,478	**(110)**
Activity Management and Support	4,292	2,083	**(2,209)**
	55,353	49,252	**(6,101)**

Explanation of Change: The change is due to the following major program additions approved in 1983-84 Supplementary Estimates: Energy Research Development ($3,931,000), Boundary Dispute ($945,000), and Sudbury, Timmins, Algoma Mineral Program (STAMP) ($700,000), and other minor initiatives.

Description

The Geological Surveys Activity is responsible for geological, geophysical and geochemical research and surveys; estimation of mineral and non-renewable energy resources; investigation of phenomena affecting engineering works and the environment; development of geophysical and other technologies; development of national geoscience standards; fostering Canadian geoscience and Canadian international geoscience activities; co-operation with the provinces; provision of advice to government; and production and dissemination of maps and reports.

Performance Information/Resource Justification

The outputs of the Geological Surveys Activity serve three main functions:

- Ensuring the availability of comprehensive basic knowledge of the geology of the Canadian landmass, including offshore areas, to meet national needs.

- Acquiring geological information on the nature, distribution and magnitude of Canadian mineral and energy resources, and developing related exploration technology as required for effective exploration for minerals and energy, estimation of the resource base of Canada, and formulation of policies.

- Identifying and assessing natural geological hazards, features, and processes that affect the environmental and ecological balance that may constrain the use of the land, particularly in association with resource exploration, development and utilization.

Without a comprehensive geoscience knowledge base, neither resource assessment nor land use evaluation can be made. As a result, it has been found best to treat these tasks as interlocking. In practice, this means enhancing the comprehensive knowledge base while, at the same time, meeting current needs for information on the geology of resources, and on land-use and hazards questions that are important to the socio-environmental aspects of resource development.

The work of this Activity is covered by some 450 projects directed by 275 project leaders. These projects vary in magnitude from under $10,000 and 0.2 P-Y to about $350,000 and 4 P-Y per year and have an average life of five years. All projects are carefully defined, with planned outputs for each year of their life. The number of projects undertaken in co-operation with other federal agencies, provincial departments, universities, industry and foreign governments has increased. Co-operative activities are continuing under Mineral Development Agreements with Manitoba, New Brunswick, Newfoundland, Nova Scotia and Saskatchewan, and negotiations are continuing with the other provinces.

Figure 17 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 17: Geological Surveys

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Cordilleran Geology	4,576	49	To ensure the availability of comprehensive knowledge, technology and expertise on the bedrock geology and mineral resources of the Western Cordillera and on the marine geology of the Pacific Continental Margin.	- Investigating bedrock geology in British Columbia and the Yukon, with reference to mineral deposits, and producing modern-standard geological maps. - Assessing volcanic geothermal energy sources. - Investigating the coastal and marine geology of the Pacific Margin, especially for hydrocarbon resources. - Studying deep-sea mineral deposits near the Juan de Fuca Ridge, and carrying out surveys in the area of the offshore boundary with the U.S.A.
2. Sedimentary and Petroleum Geology	16,594	161	To ensure the availability of comprehensive knowledge, technology and expertise on the geology and resource potential of the sedimentary basins of Western and Northern mainland Canada, the Arctic Islands and the Arctic offshore regions.	- Investigating bedrock geology with particular reference to oil, gas and coal in the area of responsibility, and producing modern-standard geological maps. - Researching the geological occurrence of oil, gas and coal. - Co-ordinating the assessment of Canadian resources of oil, gas and coal, the former two for the Interdepartmental Petroleum Resource Appraisal Panel.
3. Precambrian Geology	6,711	79	To ensure the availability of comprehensive knowledge, technology and expertise on the bedrock geology and mineral resources of the Canadian Precambrian Shield; and to provide isotopic age and paleomagnetic determinations and petrological information for all regions of Canada.	- Investigating bedrock geology in the Canadian Precambrian Shield, including the modern-standard geological maps for Canada Lands production of and complementing the research of provincial agencies. - Studying the tectonic framework and deep-earth structure of the Shield. - Determining isotopic ages and paleomagnetic and petrological information for all of Canada.
4. Atlantic Geoscience	19,929	121	To ensure the availability of comprehensive knowledge, technology, and expertise on the geology (including resources) of the Atlantic and Arctic offshore regions of Canada and the sedimentary basins of the Appalachian region.	- Studying seabed and coastal geology and processes, with particular reference to constraints affecting offshore oil and gas development. - Investigating the marine geology and geophysics in the Atlantic and Arctic offshore, with attention to sedimentary basins and Canada's maritime boundaries. - Assessing petroleum resources of the Atlantic offshore, and coal resources in Atlantic Canada.
5. Terrain Sciences	5,182	72	To ensure the availability of comprehensive knowledge, technology and expertise on the surficial geology, geomorphic processes, and natural terrain hazards of the Canadian landmass and on the capability of the terrain to support human activities.	- Investigating surficial geology throughout Canada, particularly in Canada Lands, and producing modern-standard terrain inventory maps. - Documenting geological conditions, constraints and hazards affecting land use, particularly in Northern Canada and relating to environmental and resource-development issues. - Researching geological aspects of acid rain, nuclear fuel waste disposal, slope stability, and permafrost.

Figure 17: Geological Surveys (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
6. Economic Geology and Mineralogy	6,545	98	To ensure the availability of comprehensive geological knowledge, technology and expertise concerning metallic and other mineral deposits; to determine the geological distribution, origin and potential abundance of Canadian mineral resources to facilitate exploration, land-use planning and formulation of policy; and to provide compositional analyses of rocks, minerals, ores and other geological materials.	- Determining the geological distribution and potential abundance of mineral deposits in Canada. - Producing mineral resource appraisals for specific areas, and assessing uranium and thorium resources on a biennial basis. - Researching the formation of mineral deposits, to aid the discovery of new deposits. - Providing information on mineral commodities throughout Canada and world-wide. - Analysing more than 5,000 samples by a wide range of chemicals, instrumental and mineralogical techniques. - Developing new and improved analytical techniques.
7. Resource Geophysics and Geochemistry	14,677	106	To provide geophysical and geochemical information on a nationally consistent basis.	- Developing new geophysical and geochemical methods and instruments to aid the Canadian mineral industry, and transferring technology to industry. - Producing systematic aeromagnetic, radiometric and geochemical maps and compilations, to aid the mineral industry. - Maintaining national geophysical and geochemical standards. - Carrying out experimental surveys to assist in solving specific geological problems.
8. Geological Information	4,598	95	To ensure that the results of the Activity's scientific program are made available to users in a timely and effective manner; and to maintain the library of the Geological Survey as the principal earth sciences library in Canada.	- Co-ordinating the publishing of approximately 250 maps and 75 reports, and the release of 80 open file reports. - Responding to more than 11,000 requests for geological information directed to the library of the Geological Survey.

F. Earth Physics

Objective

To ensure the availability of geophysical information and expertise concerning the solid earth, its physical processes and geophysical hazards, as required for public safety and security, and for the management of the Canadian landmass and offshore areas.

Resource Summary

This Activity accounts for approximately 5% of the total Program expenditures and approximately 5% of the total person-years. A more detailed breakdown of resources is given in Figure 18.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Seismology	**6,275**	**56**	5,461	58	5,189	57
Geothermics	**1,787**	**9**	2,865	9	2,613	10

	17,029	**169**	16,939	172	15,007	169

Of the total expenditures, 48% is for personnel costs, 18% for capital and 34% for all other operating expenditure items.

Past Financial Performance

Figure 19 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 19: 1983-84 Past Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Seismology	5,189	4,639	**(550)**
Geothermics	2,613	2,400	**(213)**
Geomagnetism	2,179	2,401	**222**
Gravity	2,231	2,239	**8**
Geodynamics	1,495	1,489	**(6)**
Activity Management and Support	1,300	1,233	**(67)**
	15,007	14,401	**(606)**

Explanation of Change: There were no significant changes between the actual and planned financial requirements. The minor differences were funded through reallocations within the Program.

Description

In fulfilling its objective, the Earth Physics Activity operates the Canadian networks of seismological, geomagnetic and geodynamic observatories, and it maintains gravity and magnetic standards throughout the country.

Each year, the Earth Physics Activity carries out a number of field surveys and experiments for the purpose of determining: the structure and physical characteristics of the interior of the earth (seismological, gravity and geomagnetic); the strength, direction and secular variation of the earth's magnetic field (geomagnetic); measurements of the earth's movements in earthquake-prone areas (geodynamics); and the distribution and characteristics of potential geothermal energy sources, permafrost and frozen gas hydrates (geothermics). Other specialized field studies are carried out as occasion warrants. An example is the Canadian Expedition to Study the Alpha Ridge in 1983 (CESAR 83), a multidisciplinary study effort.

The Earth Physics Activity produces a wide variety of solid earth geophysical data in the form of paper records, analogs, digital records and field notes. These data are reduced, corrected and analyzed in-house and by contract to provide information on: seismicity and seismic risk and hazard; the processes, hazards and distribution of permafrost; the location and size of sources of geothermal energy; the geomagnetic field

of the earth and its variations and regional anomalies; the gravity field of the earth and its regional anomalies; polar motion; time and latitude variations; and the structure, dynamics and geophysical history of the earth. This information and some raw data are used by mineral and petroleum exploration companies and consultants; universities; insurance and construction industries; other governmental departments and agencies (e.g., National Research Council Canada, External Affairs Canada, National Defence, and Atomic Energy of Canada Limited (AECL)); and international scientific agencies.

The Activity carries out R&D at its Ottawa Headquarters (132 P-Y) and at the Pacific Geoscience Centre, Sidney, B.C. (26 P-Y). There are 10 P-Y at observatories where contracting out is impractical at this time. While maintaining a useful base of scientific research, the Branch has become more and more involved in applied geophysics, e.g., federal energy programs; nuclear fuel waste management; preparation for monitoring of a comprehensive treaty banning nuclear-bomb tests; and delineation of sources of renewable energy.

Performance Information/Resource Justification

Figure 20 provides a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 20: Earth Physics

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Seismology	6,275	56	To monitor seismic ground motion in Canada; and to conduct seismological research into the structure and dynamics of the earth.	- Operating to accepted standards the Canadian seismological networks and arrays, and managing, disseminating and archiving the data. - Determining and publishing (with emphasis on areas of economic development) the parameters of current Canadian earthquakes. - Providing partial funding to a consortium of universities to undertake one major reflection survey, in Phase II of the Canadian Lithoprobe Project. - Continuing to develop the capability and to participate actively in international data exchange and undertaking research on seismic verification of a Comprehensive Test Ban Treaty.

Figure 20: Earth Physics (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
2. Geothermics	1,787	9	To conduct research into the thermal regime of the Canadian landmass (onshore and offshore), the potential for geothermal energy in Canada and the significance of permafrost and gas hydrates to northern development.	- Measuring terrestrial heat flow and studying permafrost and gas hydrates in the laboratory and field. - Developing plans and specifications for controlled test facilities for permafrost research. - Analyzing the role of water in sub-surface heat transfer. - Issuing progress reports on the geothermal energy assessment and demonstration programs.
3. Geomagnetism	2,620	34	To monitor the geomagnetic field over the Canadian landmass and offshore areas, and to conduct research on the structure of the geomagnetic field and its variations.	- Operating the Canadian Magnetic Observatory network to accepted standards, and managing, disseminating and archiving the data. - Carrying out paleomagnetic studies and electro-magnetic field studies in key areas. - Re-occupying 14 magnetic secular variation stations.
4. Gravity	2,614	29	To carry out gravity surveys of the Canadian landmass and offshore areas; to provide national gravity standards and gravity data; to complete regional and national gravity maps; and to conduct research into the gravity field and structure of the earth.	- Gathering approximately 2,000 static measurements and 10,000 line kilometers of data for regional gravity mapping and enhancement of the National Gravity Data Base. - Participating in multi-disciplinary surveys on the Ice Island Project or in other Arctic geoscience studies. - Co-ordinating the geophysical component of the Nuclear Fuel Waste Management Program of AECL and providing quaterly reports to it.
5. Geodynamics	2,332	17	To monitor polar motion, earth rotation and the crustal stability of the Canadian landmass, and to conduct research into the dynamics of the earth.	- Monitoring polar motion at two Canadian observatories. - Developing space-oriented techniques. - Monitoring short- and long-term crustal deformations in seismically active Canadian areas.

G. Polar Continental Shelf

Objective

To contribute to the orderly scientific investigation of Canada's polar continental shelf, the contiguous Arctic Ocean and mainland regions; and to maintain and improve the logistics required for scientific investigations in an Arctic environment.

Resource Summary

This Activity accounts for approximately 2% of the total Program expenditures and approximately 1% of the person-years. A more detailed breakdown of resources is given in Figure 21.

Figure 21: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Arctic Science	**279**	**9**	275	9	275	9
Logistics	**5,345**	**12**	5,268	12	5,245	12
Activity Management and Support	**443**	**9**	437	9	433	9
	6,067	**30**	5,980	30	5,953	30

Of the total expenditures, 22% is for personnel costs and 78% for all other operating expenditure items.

Past Financial Performance

Figure 22 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 22: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Arctic Science	275	625	**350**
Logistics	5,245	4,480	**(765)**
Activity Management and Support	433	570	**137**
	5,953	5,675	**(278)**

Explanation of Change: There were no significant changes between the actual and planned financial requirements. The minor differences were funded through reallocations within the Program.

Description

The Polar Continental Shelf Activity provides co-ordinated logistic support to public and private sector groups conducting scientific studies in the Arctic; it provides information about scientific operations in the Arctic to the scientific community and to the local inhabitants; and it undertakes studies of scientific phenomena unique to the Arctic.

In co-operation with the Canadian Committee on Oceanography and the Advisory Committee on Northern Development, the Activity assists in developing and maintaining effective measures for co-ordination of scientific research in the Arctic.

Performance Information/Resource Justification

Operational and future planning of this Activity is done in consultation with scientists and science administrators of federal departments, universities and the private sector. Consultations include major conferences on broad policy direction (held every 3-5 years), an interdepartmental advisory committee and annual planning conference with client groups.

The level of scientific research in the Arctic has increased substantially during the past ten years. In 1984-85, 215 field parties were supported. Of these, 138 (64%) were governmental parties, 55 (25%) were from universities and 22 (11%) from all others. In terms of expenditures, governmental parties received 80% of the support with universities receiving 18% and all others 2%.

It is expected that the number of field parties will increase by at least 10% over the 1984-85 levels as major economic development in the North brings about an increase in the demand for services provided by this activity.

At present, no other private or public sector organization is involved in the provision of co-ordinated logistic support to scientific expeditions operating in the Arctic.

Significant goals/outputs for 1985-86 include the following:

• Establishment and maintenance of ongoing scientific station on an ice island from March of 1985	April 1985
• Visits to Arctic settlements to describe local scientific activity (ongoing)	April 1985

• Planning meeting for 1986 season	November 1985
• Completion of logistics support plan for 1986	January 1986
• Report on 1985 field activities	March 1986

H. Surveying and Mapping

Objective

To ensure the acquisition, maintenance and availability of geodetic, topographical, and geographical information throughout Canada, and the development and maintenance of cadastral frameworks for Canada Lands, as required for effective resource management, engineering works, urban development, transportation, defence, public safety, land use and demarcation and the allocation of legal interests in land.

Resource Summary

This Activity accounts for approximately 19% of the total Program expenditures and approximately 28% of the total person-years. A more detailed breakdown of resources is given in Figure 23.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Geodesy	11,269	141	11,585	144	10,060	146
Topographic Mapping	19,122	263	16,556	263	18,301	269
Canada Lands Surveying	6,673	140	6,615	140	6,431	142
International Boundary	781	12	659	12	709	13
Geographical Mapping	7,403	127	6,889	127	5,534	126
Map Publishing	11,394	168	10,400	174	10,803	180
Sherbrooke Institute of Cartography	6,044	13	4,991	13	--	--
Activity Management and Support	2,645	43	2,787	43	2,724	47
	65,331	907	60,482	916	54,562	923

Of the total expenditures, 55% is for personnel costs, 4% for materials and supplies, 14% for capital costs and 27% for all other operating expenditure items. An amount estimated at $4,550,000 (or 6% of total costs) is expected to be credited to the Consolidated Revenue Fund in 1985-86, as receipts from the sale of maps, charts, and aerial photographs.

Past Financial Performance

Figure 24 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 24: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Geodesy	10,060	10,887	827
Topographic Mapping	18,301	17,259	(1,042)
Canada Lands Surveying	6,431	6,771	340
International Boundary	709	751	42
Geographical Mapping	5,534	6,243	709
Map Publishing	10,803	9,740	(1,063)
Activity Management and Support	2,724	3,009	285
	54,562	54,660	(98)

Explanation of Change: There were no significant changes between the actual and planned financial requirements. The lapses were used to fund other minor requirements within the Program.

Description

The Surveying and Mapping Activity represents the principal presence of the federal government in matters relating to national surveying and mapping.

The Activity is responsible for: the establishment and maintenance of a national network of accurately located horizontal and vertical positional reference monuments; the acquisition and maintenance of topographical and geographical information on the Canadian landmass; the preparation, publication and distribution of topographical and electoral maps, aeronautical charts and publications, aerial photographs, gazetteers and National Atlas of Canada; the regulation and management of property surveys and the maintenance of cadastral frameworks for Canada Lands, including those in the offshore; and the maintenance of international boundaries.

The outputs of this Activity provide the essential underpinning for national and regional economic development. The maps, charts and surveys produced are used in support of natural resource development, hydro-electric and transportation development, national defence, emergency planning and the maintenance of Canadian sovereignty; to

protect property rights in Canada Lands; to promote safe aerial navigation in Canada; and to provide a measure of support to virtually all the terrain or geographically-based planning, administration and research done in Canada.

In the interest of improved productivity, the Surveys and Mapping Branch keeps abreast of new technology and its application by sponsoring and supporting research in-house, at universities and in industry.

Performance Information/Resource Justification

Figure 25 is a summary by sub-activity of specific goals and significantly planned outputs and results for 1985-86.

Figure 25: Surveying and Mapping

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
1. Geodesy	11,269	141	To ensure the availability of geodetic information concerning the Canadian landmass, based on international standards and national criteria for geodetic reference systems.	- In co-operation with the U.S. Geodetic Survey agency, completing the readjustment of the continental geodetic framework employing a redefined horizontal datum for North America. - Completing the geodetic component of the International Great Lakes Datum Project, which will provide more reliable information to Canadian and American agencies responsible for the monitoring and control of water levels. - Raising the level of completion of the basic geodetic positional system to approximately 75% from 73%, and the elevation system to approximately 88% from 87%.
2. Topographic Mapping	19,122	263	To ensure the availability of topographic information concerning the Canadian landmass, to the standards of the National Topographic System.	- Revising or updating approximately 290 out-of-date topographic maps in accordance with user needs and in preparation for inclusion in the National Digital Topographic Data Base (NDTDB). - Raising the level of completion of the 1:50,000 topographic map coverage of Canada to approximately 79% from 77%. - Raising the level of completion of the NDTDB coverage of Canada to approximately 30% from 14%.
3. Canada Lands Surveying	6,673	140	To provide, under the Canada Lands Surveys Act and other statutory authorities, an effective framework of land parcels for the identification, documentation, registration, and protection of interests in Canada Lands and for the integration of the detailed information essential to the orderly development and management of the lands.	- Investigating approximately 900 requests for surveys of Canada Lands and managing and regulating the resultant surveys. - Managing a property mapping program for 2,300 Indian Reserves for Indian and Northern Affairs Canada. - Responding to approximately 12,000 requests for information from the Canada Lands Information System.

Figure 25: Surveying and Mapping (cont'd)

Sub-Activity	Resources $000	Resources P-Y	Goals	Significantly Planned Outputs and Results for FY 1985-86
4. International Boundary	781	12	To ensure the integrity of the boundary between Canada and the U.S.A.	- Maintaining 125 km of boundary under the joint Canada-U.S.A. program.
5. Geographical Mapping	7,403	127	To ensure the availability of timely geographical and aeronautical information required for national planning, administration, education, research and safety of aviation.	- Preparing and updating approximately 1,300 aeronautical charts. - Raising the level of completion of the fifth edition National Atlas map series from 19% to approximately 23%. - Producing the third edition Gazetteer of Canada-Saskatchewan.
6. Map Publishing	11,394	168	To ensure the publication of maps, aeronautical charts, air photographs and related publications, and the maintenance of stocks for national emergencies and for sale to governments, industry and the public, through a national network of dealers in the private sector.	- Printing approximately seven million aeronautical charts, topographic and geographic maps, hydrographic charts, geological, electoral and other maps. - Distributing approximately 3.5 million maps and charts and 500,000 aerial photographic products.
7. Sherbrooke Institute of Cartography	6,044	13	To establish the Institute of Cartography, Sherbrooke, Que.	- Completing detailed cost estimates for the Sherbrooke Institute of Cartography.

I. Program Management and Support

Objective

To provide managerial direction to the Minerals and Earth Sciences Program; and to maintain central services.

Resource Summary

This Activity accounts for approximately 3% of the total Program expenditures and approximately 4% of the total person-years. A more detailed breakdown of resources is given in Figure 26.

Figure 26: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual* 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Management	3,703	33	3,777	34	3,435	31
Financial Management	225	2	222	2	106	2
Human Resources Management	1,361	35	1,022	35	764	35
Common Technical Services	3,780	43	4,759	43	2,539	43
	9,069	113	9,780	114	6,844	111

* The figures provided in this table reflect the results of changes made since 1983-84 in the organizational components of the Activity, and therefore will not correspond to information shown in Figure 27.

Of the total expenditures, 48% is for personnel costs, 17% for grants and 35% for all other operating expenditure items.

Past Financial Performance

Figure 27 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 27: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Program Management	3,435	3,490	55
Financial Management	106	112	6
Common Technical Services	2,539	2,429	(110)
	6,080	6,031	(49)

Explanation of Change: There were no significant changes between the actual and planned financial requirements. The minor differences were funded through reallocations within the Program.

Description

The Program Management and Support Activity provides central management and direction to the other activities of the MESP. Organizationally, it encompasses the Offices of the ADMs of the Mineral Policy Sector, Earth Sciences Sector, and the Research and Technology Sector. A description of the organizations and activities controlled by each Sector can be obtained from the Program Overview starting on page 4-7.

Grants in aid of energy, minerals, and earth sciences research, totalling $1,398,000 in 1985-86, are administered by the Office of the ADM, Earth Sciences. Applications for support are evaluated on the basis of their potential contribution to the achievement of departmental objectives. All of the funds are awarded to Canadian organizations.

Also included in this Activity is the Technical Field Support Service, which reports to the ADM, Finance and Administration. This organization provides support to field parties sponsored by other departmental organizations, through assistance and advice on identification of requirements, procurement, shipping, re-packing, storage and repair of field equipment.

Finally this Activity comprises the administration of the Unsolicited Proposal Program for the whole Department. Located in the Office of the ADM, Research and Technology, it involves co-ordinating departmental responses to Supply and Service Canada and ensuring that all relevant correspondence is provided. Historically, more than 250 proposals per year from Canadian firms are processed.

Performance Information/Resource Justification

Program Management: The level of support provided to the Program by this Activity has remained relatively constant over the past three years.

Figure 28: Program Management

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Totals of Program P-Y	3,208	3,215	3,116
Program management P-Y	113	114	111
Percentages of support to totals	3.5	3.6	3.6

The research grants administered by the Earth Sciences Sector have been at the following levels of activity in the last three years.

Figure 29: Research Grants Program ($000) and No. of Applicants Supported

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
Area of Research	$	No.	$	No.	$	No.
Energy	473	30	449	31	479	33
Minerals	270	30	262	29	263	27
Earth Sciences	655	90	687	98	656	91
Totals	1,398	150	1,398	158	1,398	151

Technical Field Support: This organization maintains an inventory of approximately 3,300 items and will provide support to approximately 320 field parties during the 1985-86 field season.

Section III
Supplementary Information

The Forecast and Actual columns on the various schedules of this section have been revised to reflect the transfer to the Administration Program of the resources associated with the public information activities which were previously included in the MESP.

A. Analysis by Object

1. Expenditures by Object

Figure 30: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	122,295	115,323	106,053
Contributions to employee benefit plans	17,122	14,605	15,171
Other personnel costs	318	297	667
Personnel sub-totals	139,735	130,225	121,891
Goods and Services			
Transportation and communications	12,857	12,252	10,522
Information	2,142	2,101	1,329
Scientific and engineering service contracts	56,279	48,560	26,051
Other professional and special services	28,310	25,624	21,553
Aircraft and ship rentals	1,933	1,516	5,678
Other rentals	7,980	6,884	1,993
Purchased repair and upkeep	5,572	6,249	3,744
Utilities, materials and supplies	15,793	13,470	13,708
All other expenditures	232	325	151
Goods and services sub-totals	131,098	116,981	84,729
Total Operating totals	270,833	247,206	206,620
Capital	46,212	43,197	33,645
Transfer Payments	17,335	8,472	4,061
Totals of expenditures	334,380	298,875	244,326

2. Personnel Expenditures

Figure 31: Person-Years by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Mineral Industry Development	165	154	135
Administration of the Canada Explosives Act	44	44	41
Mineral and Energy Technology	789	785	782
Remote Sensing	155	155	124
Geological Surveys	836	845	801
Earth Physics	169	172	169

Surveying and Mapping	907	916	923
Program Management and Support	113	114	111
	3,208	3,215	3,116

The net decrease of seven person-years in the 1985-86 requirements from the 1984-85 forecast is made of the following items:

• Incremental person-years to manage and carryout projects under the mineral development agreements	34
• Frontier geoscience programs	14
• Canadian Ground System	3
• Increased resources to develop Canadian radar Satellite (RADARSAT)	4
• Decrease in person-years associated with 1984-85 Summer Canada projects	(57)
• Miscellaneous	(5)
	(7)

Note: The Person-Years columns display the forecast distribution by authorized person-years for the Program by occupational group. The Current Salary Range column shows the salary ranges by occupational group at October 31, 1984. The Average Salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 35 shows the total cost of each Activity in the MESP. Other costs ($23,050,000) shown consist of the charges for accommodation provided by Public Works Canada ($20,503,000), surgical-medical insurance ($2,156,000), and other miscellaneous services ($391,000) provided free by other governmental departments. Costs shown do not include depreciation or accommodation provided by this Department without charge. The non-tax revenues shown consist of revenues from sales of maps, photos, charts, licences, privileges and permits, services, and service fees which are credited to the Consolidated Revenue Fund (see page 4-66), but which are not available as revenue to the Program.

Figure 35: Program Costs ($000)

Activity	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Total 1984-85
Mineral Industry Development	13,862	1,186	15,048	10	**15,038**	9,298
Administration of the Canada Explosives Act	2,115	316	2,431	22	**2,409**	2,098

	334,380	23,050	357,430	6,577	**350,853**	275,773

C. Other Acts and Instruments Administered in Whole or in Part by the Minerals and Earth Sciences Program

Alberta-British Columbia Boundary Act, 1974
British Columbia Act
Canada Lands Surveys Act
Canadian Income Tax Act -- Section 248
Electoral Boundaries Readjustment Act
Export and Imports Permits Act
Government Organization Act, 1983
International Boundary Commission Act
Manitoba Act
Northern Pipeline Act
Official Languages Act -- Section 18
Prince Edward Island Act
Representation Commissioners Act
Treaty of Washington — 1925
Union of Newfoundland Act
Yukon Placer Mining Act
Yukon Quartz Mining Act

D. Revenue Summary

The revenues received by the MESP are deposited to the Consolidated Revenue Fund and are not available to finance activity expenditures.

Figure 36: Revenue by Type ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Privileges, licences and permits	160	152	144
Proceeds from sales	4,820	4,376	3,962
Services and service fees	1,381	1,284	1,198
Miscellaneous	216	256	911
Total Program	6,577	6,068	6,215

The amounts of the actual principal sources of revenue for 1985-86 are as follows:

Privileges, Licences and Permits

• Certification of mining equipment	15
• Licences to factories for the manufacture of explosives	10
• Licences to companies for the importation, transportation and storage of explosives	12
• Certification of non-destructive testing technicians and inspectors	123
Sub-Total:	160

Proceeds from Sales

• Sale of maps, charts, air photographs, prints, tables and survey data	4,642
• Sale of rock and mineral samples	178
Sub-Total:	4,820

Services and Service Fees

• Provision of scientific services such as mineral assays, mineral and metal analyses, and R&D projects on behalf of industry	520
• Other services and service fees	258

- Interpretation and sale of LANDSAT data 603

Sub-Total: 1,381

Miscellaneous

- Monies received as adjustments to prior years' expenditures 216

Total: 6,577

1985–86 Estimates

Part III

Expenditure Plan

1447

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Environment Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are four chapters in this document. The first provides an introduction to the Department. The other three present the Program Expenditure Plans for each of the Department's programs.

Chapters 2 to 4 begin with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with other Estimates documents. Also included are extracts from Volume II of the Public Accounts (Parks Canada only). These are provided as an aid in assessing the Parks Canada program's financial performance over the past year.

Each Program Expenditure Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each Program. Within Section I of each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Parks Canada Program	4-1

1453

Departmental Summary

1455

Roles and Responsibilities

The Department of Environment came into being in June, 1971 following proclamation of the Government Organization Act, 1970. Known now as Environment Canada, the Department was created from components within the federal structure that relate to the natural environment. Subsequent organizational adjustments were effected through the Government Organization Act, 1979 which separated the fisheries and marine component, by Order-in-Council PC-1979-1617 which added Parks Canada to the Department's structure and by Order-in-Council PC. 1984-3200 which transferred the Canadian Forestry Service to Agriculture Canada.

The Government Organization Act (GOA), 1979 and the subsequent Miscellaneous Statutes Law Amendment Act (June 1984) and Order-in-Council PC. 1984-3200 which modified the effect of the Act, state that: the duties, powers and functions of the Minister of the Environment extend to and include:

- all matters over which Parliament has jurisdiction not otherwise assigned to other federal departments, boards and agencies relating to:
  - the preservation and enhancement of the quality of the natural environment, including water, air and soil quality;
  - renewable resources including migratory birds and other non-domestic flora and fauna;
  - water;
  - meteorology;
  - the enforcement of rules and regulations made by the International Joint Commission relating to boundary waters, and questions arising between the United States and Canada insofar as they relate to the preservation and enhancement of the quality of the natural environment; and
  - the coordination of the policies and programs of the Government of Canada respecting the preservation and enhancement of the quality of the natural environment
- such other matters over which the Parliament of Canada has jurisdiction relating to the environment as are by law assigned to the Minister.

Orders-in-Council PC-1979-1617 and PC-1979-1841 added responsibilities for national parks, national battlefields, historic sites and monuments and certain canals to the Minister of the Environment.

Recognizing that the preservation and enhancement of environmental quality in Canada is a responsibility of each federal department, and of provincial governments and the public, the Act (GOA) also gives to the Minister of the Environment broad responsibilities to promote and encourage practices and conduct leading to the better preservation and enhancement of environmental quality, and to cooperate with provincial governments or agencies thereof, or any bodies, agencies or persons in any programs having similar objectives. It also empowers the Minister to establish guidelines and advise heads of departments, boards and agencies of the federal government in all matters pertaining to the preservation and enhancement of the quality of the natural environment. Finally, it allows the Minister to enter into agreements with other governments or agencies for the purpose of carrying out programs for which the Minister is responsible.

The above-noted responsibilities are carried out through programs designed to: promote the establishment or adoption of objectives or standards relating to environmental quality or to control pollution; ensure the wise management and use of renewable resources; provide to Canadians environmental information in the public interest; ensure that new federal projects, programs and activities are assessed early in the planning process for potentially adverse effects on the environment; and ensure the preservation of Canada's natural and cultural heritage.

The Department obtains policy and expenditure approval through the Cabinet Committee for Social Development.

Expenditures for some activities, such as ice reconnaissance, aviation and defence meteorological services, water quality assessments, analytical and hydrometric work, are cost-recovered from other departments. These departments include Transport, National Defence, Indian and Northern Affairs, Fisheries and Oceans, and Energy, Mines and Resources.

Departmental Organization and Programs

Environment Canada has grouped its activities into three programs:

- Administration, which provides policy direction, management, coordination and common support services, including senior regional representation, to the other two programs also administers the Environmental Assessment and Review Process;

- Environmental Services, which provides information on weather, climate, ice and sea state and air quality; promotes conservation and protection of inland waters, lands and wildlife; and develops preventative or corrective measures for maintaining and enhancing environmental quality; and

- Parks Canada, which establishes, develops and manages national parks, national historic parks and sites, heritage canals and cooperative heritage areas.

Note: The Canadian Forestry Service was transferred to Agriculture Canada on September 17, 1984.

The organization structure of the Department is aligned with its programs as shown in Figure 1. The orga.ization is highly decentralized with approximately 75% of the employees located in field and regional offices. This high degree of decentralization is required to respond to the varying needs of clientele in, and the environmental issues affecting, specific geographical areas.

Figure 1: Relationship of Organization to the Program Structure

Departmental Spending Plan

The Department estimates total expenditures of $726,964,000 in 1985-86. A summary of the spending plan by program is presented in Figure 2.

Figure 2: Department Spending Plan by Program, 1985-86 ($000)

	Estimates 1985-86	Forecast 1984-85	Change	%
Budgetary

Note: The Canadian Forestry Service (CFS) was transferred to Agriculture Canada on September 17, 1984. This document excludes all reference to the CFS both in terms of narrative explanation and numerical information.

* Full amount credited to the Environmental Services Program (see page 3-7 and 3-47).

Departmental Priorities

The Department's principal areas of emphasis over the next few years are:

- to reduce acid deposition in sensitive areas of eastern Canada by reduction in acid causing emissions through federal-provincial and Canada-U.S.A. agreements;
- to prevent entry to the environment of toxic substances, through partnerships with industries and provinces to manage chemicals prudently and safely throughout their life-cycle;
- to ensure adoption of federal obligations arising from the national water enquiry now underway and due to report in summer 1985;
- during the 1985 centennial year of the National Parks system, to develop through public consultation a new set of strategies and policies for future conservation of Canada's natural heritage;

- to build new partnerships with the provinces and the private sector for wildlife conservation, with special emphasis federally on migratory birds and endangered species;

- to develop cost-effective means of modernizing the national weather service to ensure continued high quality services to the public and continued productivity improvements;

- to review the environmental mandate of the federal government to develop more cost effective and less complex delivery mechanisms; and

- to establish more effective means of ensuring that environmental considerations influence economic decision making of the government, and that economic factors influence environmental decisions.

Appropriation Authority

Authority is sought in these Estimates to spend $35,981,600 in support of the 1985-86 Administration Program. The remaining expenditures, estimated at $3,178,400 for pensions and other employee benefits and the Minister's salary and motor car allowance will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

In 1985-86 the Administration Program will concentrate its efforts on the following:

- Implementation of a three year action plan to improve human resource management and productivity throughout the Department. The major thrust in 1985-86 will be the decentralization of responsibility and accountability for personnel management requiring the transfer of 221 person-years and $7,723,600 from the personnel function (Administration Program) to the Operating Services (see page 2-9); and

- implementation of the improvements to the Environmental Assessment and Review Process (EARP). The resources devoted to this major effort amount to $960,000 and 4 person-years (see page 2-16).

B. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Administration	35,422	46,773	(11,351)	2-11
Federal Environmental Assessment Review Office	3,738	3,290	448	2-14
	39,160	50,063	(10,903)	
Person-Years	593	947	(354)	

Explanation of Change: The major items contributing to the change in resources are the transfers of the personnel function to the Parks Canada Program and the Environmental Service Program ($7,723,600 and 221 person-years), the transfer of the Canadian Forestry Service to Agriculture Canada ($3,528,000 and 69 person-years) and the improvements to the Environmental Assessment and Review Process (see pages 2-11 and 2-14).

Explanation of 1984-85 Forecast: The 1984-85 forecast (which includes items in Supplementary Estimates B) is $3.1 million higher than the 1984-85 Main Estimates of $46.9 million due mainly to

• Environment 2000	$ 2,505,000
• Improvements to the Environmental Assessment and Review Process	$ 920,000
• Transfer to Agriculture Canada - Administration Program resources related to the Canadian Forestry Service	$(1,764,000)

C. Background

1. Introduction

The Administration Program provides management, policy direction, advice and a full range of management support services to the two operating programs - Environmental Services and Parks Canada. In addition, liaison with governments and organizations of other countries, other federal departments and agencies, other levels of government in Canada, industry, special interest groups concerned with environmental issues and priorities, and the general public is maintained through this Program.

2. Legal Mandate

The mandate for the Administration Program is based on the legislative authority granted to the Minister of the Environment under the Government Organization Act, 1979, and Orders-in-Council PC-1979-1617 and PC-1979-1841, which effected the transfer of Parks Canada from the Department of Indian and Northern Affairs to the Department of the Environment, and PC. 1984-3200 which effected the transfer of the Canadian Forestry Service to Agriculture Canada.

The departmental mandate includes responsibility for the administration of 14 federal acts specifically assigned to the Department, as well as specific responsibilities relative to sections and provisions of acts assigned to other departments or agencies (see page 2-22).

3. Program Objective

To provide policy direction, management and services to the Department and to provide for environmental assessment review.

4. Program Organization for Delivery

Activity Structure: The Administration Program consists of two activities and three sub-activities as shown in Figure 2. Departmental Management provides executive direction and coordination for all activities of the Department; Departmental Services provides information,

finance, personnel, EDP and administrative support services including functional advice to the Deputy Minister and the Senior Management Committee; and Regional Management ensures the effective delivery of national programs in the regions. The Federal Environmental Assessment Review Office administers the Environmental Assessment and Review Process (EARP).

Figure 2: Activity Structure

Organization Structure: The Administration Activity is carried out by the following components: Corporate Offices comprised of the Minister's and Deputy Minister's Offices, the Corporate Planning Group and Science Advisor which constitute the Departmental Management Sub-Activity; the Finance, Personnel and Administration Service and the Information Directorate which constitute the Departmental Services Sub-Activity; and five Regional Directors General which form the Regional Management Sub-Activity. The Canadian Environmental Advisory Council (CEAC), an independent advisory group reporting to the Minister, is also included in this Activity.

The Federal Environmental Assessment Review Office constitutes the second activity of the Program and the manager accountable is the Executive Chairman, Federal Environmental Assessment Review Office.

In addition to the departmental headquarters in Hull, Quebec, there are five regional offices located as follows: Atlantic Region - Dartmouth, Nova Scotia; Quebec Region - Quebec, Quebec; Ontario Region - Toronto, Ontario; Western and Northern Region - Edmonton, Alberta; and Pacific and Yukon Region - Vancouver, British Columbia. As well, there is a small FEARO office in Vancouver, British Columbia.

Each regional office, headed by a Regional Director General, provides regional management and support services, particularly public information services, for departmental operations in their region.

Figure 3 displays reporting relationships and sets out activity resources by organizational component.

Figure 3: 1985-86 Resources by Organization and Activity

	$000	P-Y	$000	P-Y	$000	P-Y	$000	P-Y	$000	P-Y	$000	P-Y

Federal Environmental Assessment Review Office											3,738	29

D. Planning Perspective

1. Environmental Setting

Key factors influencing the Administration Program include the following:

Intergovernmental Relations: Environmental matters, water resources, wildlife and the atmosphere do not respect man-made political boundaries, between provinces, or between countries. Many of the major issues of the day, acid rain, airborne and water borne transport of toxic chemicals, water use and allocation, climate change due to pollution of the atmosphere and protection of the health-saving stratospheric ozone layer, are interprovincial, international or even global in nature.

To deal with such issues for the citizens of Canada we must forge more effective, and new partnerships with provinces, with the United States of America and with other governments. The coordination of the many federal-provincial and international relations of the Department is managed within the Administration Program.

Economic Climate: The government is committed to economic renewal to foster sustained economic growth and high employment by working in partnership with all concerned. The Department will contribute to these objectives by helping to ensure management of basic natural resources of water, wildlife and lands in a sustainable manner. At the same time, improvements in departmental efficiency and effectiveness will be introduced to contribute to restoring governmental fiscal responsibility. Expenses are being strictly restrained (see page 2-12).

New Government Policy Affecting the Program: On September 17, 1984 the Canadian Forestry Service was transferred to Agriculture Canada. The Administration Program in Environment Canada is affected by a reduction in the allocation of $3,528,000 and 69 person-years relating to the delivery of this service for 1985-86 and subsequent years.

2. Initiatives

In 1985-86, the Administration Program will continue a number of productivity, management and organizational improvement initiatives commenced in previous years and which are part of the overall productivity improvement and fiscal restraint goals the Department is pursuing.

A new initiative by the Administration Program as a contribution to this effort for 1985-86 and as a first step towards improving human resource management, is that responsibility and accountability for this aspect of management will be assigned to managers in the operating programs. This action requires the transfer of 221 person-years and $7,723,600 from the Administration Program to the other programs of Environment Canada.

3. Program Effectiveness

Through its two operating programs, Environmental Services and Parks Canada, the Department endeavours to foster harmony between society and the environment for the economic, social and cultural benefit of present and future generations.

By providing policy direction, management support, program evaluation, audit, coordination and common support services to the Department and administering the Environmental Assessment and Review Process, the Administration Program facilitates and contributes directly to the effectiveness of the Operating Programs.

Section II
Analysis by Activity

A. Administration

Objective

To provide policy direction, management, coordination and common support services to the Department.

Resource Summary

The Administration Activity accounts for 90% of the total 1985-86 Administration Program expenditures and 95% of the total person-years.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Departmental Management	6,657	99	7,389	95	6,701	87
Departmental Services	23,693	382	35,655	730	33,130	742
Regional Management	5,072	83	3,729	94	2,929	57
	35,422	564	46,773	919	42,760	886

Personnel costs account for 69% of the total activity expenditures. Other significant expenditure areas are: transportation and communication, 11%; professional and special services, 12%.

The major item contributing to this decrease is the transfer of the personnel function from the Administration Program to the Operating Programs, Environmental Services and Parks Canada (see page 2-5).

Description

Departmental Management: This consists of the provision of executive direction and coordination for all departmental activities by establishing departmental policies, strategies, plans and priorities and the monitoring of effectiveness and efficiency, the management and coordination of intergovernmental and interdepartmental affairs; the provision of special advice on the state of the environment and on scientific and technical issues affecting the Department.

Departmental Services: This consists of the provision of support and advice on financial matters, including functional direction to the Department: the provision of personnel policy and human resource management systems; the operation of central departmental EDP services, and the development of departmental policy and plans in EDP and information technology; the provision of administrative policy and support; and the provision of departmental public information services and public relations advice, including research, planning and communications matters.

It also includes the provision of regional information and some finance and administrative services and support to departmental operations in the regions.

Regional Management: This consists of five Regional Directors General (RDG), each heading a regional office. The RDG is the senior executive officer in each region whose role it is to ensure the effective delivery of national programs and specifically to ensure programs are sensitive to regional environmental concerns and responsive to economic development needs and to liaise with provincial governments and agencies and regional officials of other federal departments.

Performance Information/Resource Justification

Performance information relates principally to the efficiency and effectiveness of program systems and delivery.

The adequacy of guidance and control over administrative functions and the provision of required administrative services needed in the most cost effective manner are indications of the performance of the Administration Services Sub-Activity. In some areas of Administrative Services, extensive workload information is available, although these have not yet been incorporated into an overall framework of management information. The management information framework is targeted for completion in 1985-86.

Over the past four years, the Improvement of Management Practices and Control (IMPAC) project has been instrumental in improving the administration of the entire Department as well as the Administration Activity.

A major effort is now being undertaken on productivity improvement. This will have a direct impact on the performance of the Department and the Administration Activity. A productivity coordinator has been appointed who will promote ways and means of improving productivity. The goals of this productivity program are as follows:

- to create the conditions within which the improvements of effectiveness and efficiency become an integral part of the effort of all employees; and

- to remove obstacles to productivity improvement both within the Department and to the extent possible within the environment in which it operates.

In order to develop a meaningful program, many discussions were held with leading private sector companies, and recently created productivity centres, known for their progressive work in the field of productivity. This research along with consultations within the public sector, both at the federal and provincial levels, has provided a reliable base from which to develop Environment Canada's productivity strategy. This work has resulted in building productivity into the day-to-day activities through the identification of specific productivity initiatives in the departments' operational plans. During the coming years improved measurement techniques will be developed and used to track the effects of these efforts in order to identify and reinforce the most successful initiatives.

B. Federal Environmental Assessment Review Office

Objective

To promote environmentally sensitive and publicly responsive resource and project planning and decision-making across government.

Resource Summary

The Federal Environmental Assessment Review Office (FEARO) Activity accounts for 10% of the total 1985-86 Administration Program expenditures and 5% of the total person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Federal Environmental Assessment Review Office	3,738	29	3,290	28	3,626	25

Personnel expenditures account for 37% of the total activity expenditures with an additional 48% being used for contracted services. The balance is required for other operating expenses.

The major item contributing to this increase is improvements to the Environmental Assessment and Review Process (EARP).

Description

The FEARO Activity consists of the administration of the Environmental Assessment and Review Process which is directed at ensuring that for federal programs, projects and activities, potentially adverse environmental consequences are considered at the planning stage.

FEARO develops and implements procedures, guidelines and administrative references for the environmental assessment process; ensures competent reviews of all projects; evaluates the performance of the environmental impact assessment process and recommends appropriate changes to improve its effectiveness.

FEARO appoints separate environmental assessment panels to review each project referred. Each panel develops guidelines for the preparation of an Environmental Impact Statement (EIS) by the federal department or agency initiating the particular project; studies the EIS; holds public meetings; and reports to the Minister of the Environment.

FEARO also administers the budget of the Canadian Environmental Assessment Research Council (CEARC) which was established in 1984 with responsibility to advise government, industry and academic research organizations on how to improve the scientific, technical and procedural basis for environmental impact assessment. CEARC's objective is to contribute to the quality of the natural and social environment by reviewing and commenting on the use of scientific information and the place of environmental assessment in planning development.

Performance Information/Resource Justification

The efficiency and effectiveness of the Environmental Assessment and Review Process will improve with the number of corrective and streamlining measures FEARO is undertaking. One of the key objectives is to reduce the regulatory burden and cost of development while maintaining the sensitivity of governmental institutions to environmental and directly related social concerns and ensuring government receives credit for this sensitivity.

Resources are primarily expended to establish and operate independent public review panels, administer review procedures, provide policy guidelines and advice to participating agencies, and to develop recommendations for appropriate policy improvements. The number, size and complexity of projects referred to FEARO for review are the main determinants of resource requirements.

In addition to maintaining ongoing operations, FEARO could be carrying out approximately nine major project proposals in 1985-86. These projects and the currently estimated costs are shown in Figure 6.

Figure 6: Major Project Proposals Anticipated to Require Public Review in 1985-86

Project Proposal	Estimated Cost 1985-86
	$
Vancouver International Airport	50,000
Grand Banks Hydrocarbon	440,000
West Coast Offshore	150,000
Slave River Hydro	40,000
Polar Gas Pipeline	100,000
Eldorado Low-Level Radioactive Waste Disposal	100,000
High-Level Radioactive Waste Disposal	20,000
Fraser River Training Works	100,000
CN Twin Tracking	15,000

147

In 1985-86, major effort will be directed to improving the environmental assessment and review process. The overall cost related to the EARP improvement and the establishment of the Canadian Environmental Assessment Research Council is approximately $960,000 and 4 person-years. More specifically:

- the main focus will be on working with other government departments to bring improvements to the front end of the EARP process; and

- the development of procedures for ensuring follow-up of panel recommendations into project design and to monitor the resulting environmental effects.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Administration Program expenditures by object are presented in Figure 7.

Figure 7: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	22,442	31,338	28,575
Contributions to employee benefit plans	3,136	3,837	4,216

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

The capital expenditures for the Administration Program amount to $184,000 for 1985-86 and are required for procurement of minor equipment.

4. Transfer Payments

Details of transfer payments are shown in Figure 10.

Figure 10: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

B. Cost Analysis

Net Program Costs

The 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must also be included when considering the actual costs to operate the Administration Program. In 1985-86, these items are accommodations provided without charge by Public Works, $4,247,000, and other services provided without charge by other departments, $513,000. These are allocated by activity according to the person-year allocations percentage.

Figure 11: Net Cost of Program by Activity, 1985-86 ($000)

	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Deduct Revenue	**Total Net Cost**	Forecast 1984-85
Administration	35,422	4,527	39,949	-	**39,949**	51,555
Federal Environmental Assessment Review Office	3,738	233	3,971	-	**3,971**	3,436
	39,160	4,760	43,920	-	**43,920**	54,991

C. Additional Information

1. Acts Administered in Whole or in Part

Environment Canada is responsible for administering the 14 acts shown in Figure 12. In addition, it is responsible for administering parts of acts, or providing specific advice and information under certain sections and provisions of the Acts shown in Figure 13.

Figure 12: Acts Administered by Environment Canada

The Canada Water Act
The Canada Wildlife Act
The Clean Air Act
The Department of the Environment Act
The Eastern Rocky Mountain Conservation Act
The Environmental Contaminants Act
The Game Export Act
The Historic Sites and Monuments Act
The International River Improvements Acts
The Migratory Birds Convention Act
The National Battlefields Act
The National Parks Act
The Ocean Dumping Control Act
The Weather Modification Information Act

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $358,862,000 in support of the 1985-86 Environmental Services Program. The remaining expenditures, estimated at $25,862,000 for pensions and other employee benefits will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Environmental Services Program		
5	Operating expenditures	298,275	279,446
10	Capital expenditures	44,396	39,093
15	Grants and contributions	16,191	37,488
(S)	Contributions to employee benefit plans	25,862	22,570
	Total Program	384,724	378,597

Votes - Wording and Amounts

Vote No.	Department or agency (dollars)	1985-86 Main Estimates
	Environmental Services Program	
5	Environmental Services - Operating expenditures including recoverable expenditures incurred in respect of the Prairie Provinces Water Board, the Qu'Appelle Basin Study Board, the St. John River Basin Board, and authority for the Minister to engage such consultants as may be required by the above Boards at such remuneration as the Boards may determine; recoverable expenditures incurred in respect of Regional Water Resources Planning Investigations and Water Resources Inventories, authority to make recoverable advances not exceeding the aggregate of the amount of the shares of the Provinces of Manitoba and Ontario of the cost of regulating the levels of Lake of the Woods and Lac Seul and the amount of the shares of provincial and outside agencies of the cost of hydrometric surveys, and authority to spend revenue received during the year	298,275,000
10	Environmental Services - Capital expenditures and authority to make payments to provinces or municipalities as contributions towards construction done by those bodies and authority to make recoverable advances not exceeding the amount of the shares of provincial and outside agencies of the cost of joint projects including expenditures on other than federal property	44,396,000
15	Environmental Services - The grants listed in the Estimates and contributions	16,191,000

Section I
Program Overview

A. Highlights

For 1985-86, the Environmental Services Program has established the following goals:

- to promote and stimulate a reduction in the long range transport of atmospheric pollutants, particularly acid rain (see pages 3-13, 3-17, 3-18 and 3-24);
- to reduce dioxin in the environment by 1990, as one of the priorities of the Toxic Chemical Management Program, by controlling emissions from specific industries and incineration sources (see pages 3-13, 3-17, 3-18 and 3-24);
- to streamline the weather services and to implement cost-recovery for certain specific services (see pages 3-16 and 3-27);
- to investigate causes of climate variability and change and their impacts on Canadian socio-economic activities (see pages 3-14, 3-16 and 3-28);
- to complete construction of the new National Hydrology Research Centre in Saskatoon, at an estimated capital cost of $16.1 million, of which $8.4 million will be expended in 1985-86 (see page 3-15);
- to negotiate water quality agreements for one or more transboundary rivers and increase the number of federal-provincial water quality monitoring agreements from one to five (see page 3-32);
- to implement a federal habitat protection program through the Wildlife Habitat Canada Foundation ($2 million) (see page 3-34);
- to provide leadership for the federal efforts associated with humane trapping ($1 million and 2 person-years) (see page 3-34); and
- to contribute to the St. Lawrence River Restoration program by development of plans on five federal port facilities and joint federal-provincial environmental emergency program (see page 3-23).

B. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Main Estimates 1985-86			Forecast 1984-85	Change	
	Expen-ditures	Revenue Credited to Vote	**Net Expen-ditures**	Net Expen-ditures	Net Expen-ditures	For Details See Page
Environmental Protection	56,672	-	**56,672**	74,178	(17,506)	3-20
Atmospheric Environment	223,487	31,760	**191,727**	180,343	11,384	3-25
Environmental Conservation	137,751	1,426	**136,325**	148,907	(12,582)	3-30
	417,910	33,186	**384,724**	403,428	(18,704)	
Person-years			**4,799**	5,139	(340)	3-37

In addition to the estimated $33.2 million in revenue to be credited to the Vote in 1985-86, the Program will generate approximately $15.4 million in revenue that will be credited directly to the Consolidated Revenue Fund. Figure 16 on page 3-47 provides additional detail on the revenue of the Program.

Explanation of Change: The following are the major items contributing to the estimated decrease of $18.7 million:

- expiration of the Environment 2000 program $(17.7) million
- reductions in the activities of the Canadian Wildlife Service not related to migratory birds and endangered species $(3.8) million
- reductions in contributions under the Canada Water Act $(2.0) million
- reductions achieved through the streamlining of weather services $(1.7) million
- reductions in the recycling and waste management activities $(1.2) million
- reductions in contribution payments related to the construction of sewage treatment facilities. $(10.0) million

- operating and capital expenditures for developing expanded ice and iceberg analysis and forecast capabilities $ 8.0 million

- decentralization of the personnel function from the Administration Program $ 4.0 million

- allowances for the impact of inflation on salaries and contributions to the Employee Benefit Plan $ 10.0 million

Explanation of the 1984-85 Forecast: The 1984-85 forecast (which includes items in Supplementary Estimates A and B) is $24.8 million higher than the 1984-85 Main Estimates of $378.6 million mainly due to the Environment 2000 Program ($17.7 million).

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

Figure 3: 1985-86 Distribution of Gross Expenditures by Object

C. Background

1. Introduction

The Environmental Services Program is one of three programs in the Department of the Environment. This Program has the primary responsibility for matters relating to the environment and its constituent resources, as well as for promoting and sustaining the economic utilization of wildlife, land and inland water resources of the nation.

Some of these responsibilities are shared between the federal and provincial governments. The provinces have direct management responsibility for most environmental and resource matters within their borders. The federal government has responsibility for those matters which are clearly within its jurisdiction (e.g., the Territories, National Parks, some resources such as fisheries, and the impact of its own activities) and for matters which the provinces cannot readily or cost-effectively undertake separately (e.g., climate services, information collection, and research). Because environmental processes transcend political boundaries and human activity can impinge on matters under both federal and provincial jurisdictions, DOE and its provincial counterparts co-operate closely in the formulation and execution of their respective environmental policies.

In addition, through cooperation and/or negotiation with foreign governments, the Department participates in and endeavours to stimulate the resolution of international environmental and renewable resource problems such as world-wide contaminants, climate change, the long-range transport of atmospheric pollutants and the management of migratory birds.

2. Legal Mandate

The statutory mandate for the Department of the Environment (DOE) is derived from the Government Organization Act (1979). This Act establishes the responsibilities of the Minister of the Environment, and specifies functions of the Minister in carrying out these responsibilities. The functions include programs to: promote adoption of objectives or standards relating to environmental quality and pollution control; mitigate adverse environmental impacts of new federal projects; and provide Canadians with environmental information.

The Act gives to the Minister of the Environment broad responsibilities to influence federal departments and agencies and to work with provincial governments and the public to preserve and enhance environmental quality. The Minister is also authorized to develop guidelines for activities of federal bodies, and enter into agreements with provincial governments or agencies.

Other Acts defining more specific powers and duties of the Minister of the Environment and responsibilities of the Department are listed on page 3-50 in the Supplementary Information - Section III.

3. Program Objective

To promote and undertake programs to protect and enhance the quality of the environment, and programs designed to improve the management and sustained economic utilization of wildlife and inland water resources of the nation.

In pursuing this objective, the Program undertakes to:

- influence human activities in a way that will achieve and maintain a state of the environment necessary for the health and well-being of man, and allow for the health and diversity of species and of ecosystems, and the sustained use of natural resources;

- ensure that Canada has adequate information on the atmosphere, ice and sea state for the safety of life, the security of property, the greater effeciency of economic activities, and for the maintenance and enhancement of environmental quality; and

- conserve and enhance Canada's renewable resources of water, land and wildlife and their related ecosystems and promote their wise use in a sustainable manner.

4. Program Organization for Delivery

Activity structure: The Environmental Services Program is divided into three activities and 12 sub-activities. The Environmental Protection Activity leads the development and maintenance of a knowledge base sufficient to assess the significance of environmental threats arising from human activities, and balanced strategies which incorporate economic measures, public consultation, and advocacy and regulatory approaches for use in preventing or correcting environmental problems. The Atmospheric Environment Activity is responsible for providing weather, climate, sea state, ice and air quality information and for undertaking related research. The Environmental Conservation Activity promotes improvements in: the quality, management and wise use of inland water resources; the protection, conservation and management of wildlife resources specifically, migratory birds and threatened or endangered species; and the wise management and use of land resources.

Figure 4: Activity Structure

Organization Structure: The organization structure parallels the Program's activity structure with a separate organizational unit (Service) for each of the three activities. Each Service is directed by an Assistant Deputy Minister, who is accountable to the Deputy Minister.

In general, each Service is organized through two levels of management: national and regional. The national headquarters are located in Hull, Quebec for the Environmental Protection and Environmental Conservation activities and in Downsview, Ontario for the Atmospheric Environment activity. In addition to providing management and direction for their respective Service, each national headquarters is responsible for policy development, national planning, and the monitoring and review of programs and policy implementation.

Regional headquarters are located in Dartmouth, Bedford and Halifax - Nova Scotia, Sackville - New Brunswick, Quebec and Montreal - Quebec, Toronto, Burlington and Ottawa - Ontario, Winnipeg - Manitoba, Regina - Saskatchewan, Calgary and Edmonton - Alberta, and Vancouver -British Columbia. These regional headquarters manage and coordinate activity efforts within their jurisdiction, and direct the development and implementation of programs to address local and regional environmental and renewable resource issues.

At the operational level, the Environmental Services Program is highly decentralized. In addition to operating units at each of the national and regional headquarters, each Service operates a number of field offices and stations. Of the Program's 4,799 authorized person-years, approximately 4,400 are operational and support staff. Approximately 3,100 of these are located in regional and field offices.

The organization structure provides a clear chain of command and line of accountability from the line manager to the respective Assistant Deputy Minister. However, there are a number of issues, such as the Long Range Transport of Airborne Pollutants and Environmental Assessment, that require professional and scientific input from more than one organizational unit and Service. For each such issue, normally called an Integrated Program, lead responsibility is assigned to the Service primarily concerned and cross-Service lines of reporting and accountability are clearly established.

D. Planning Perspective

1. Environmental Setting

A number of external factors influence the Environmental Services Program.

Public and Political Priorities: The government's priorities are strongly influenced by clear scientific and other evidence of problems and by public concern and support for solutions. Five such issues are currently being addressed by the Environmental Services Program:

Acid Rain: Emissions of sulphur dioxide (SO_2) and nitrogen oxides (NO_x) from Canadian and U.S. sources are causing economic and environmental damage in a 2.5 million hectare area in eastern Canada. The natural resource base at risk due to acid rain sustains 8 per cent of Canada's GNP. Reduction of wet sulphate deposition in central and eastern Canada to no more than 20 kilograms per hectare per year is required to protect moderately sensitive aquatic systems. Achievement of this objective requires that total SO_2 emissions from Manitoba east be reduced to 2.3 million tonnes (about one half of the 1980 level) along with compatible action in the United States. Public opinion polls in 1984 showed that 86 per cent of Canadians see acid rain as a serious problem - an increase of 7 per cent over previous years. The new improved relationships between the Federal government and the provinces and between the Canadian and Unites States governments offers new opportunities to move towards a solution.

Toxic Substances: Chemicals provide important benefits to society. At the same time many chemicals pose threats to human health and the environment. The aim is for Canadians to manage their responsibilities for chemicals in a way that maximizes the benefits and minimizes the damages. This inevitably involves conscious decisions between risks and benefits (e.g. for pesticides); it involves a willingness to take prudent action even in the face of incomplete scientific knowledge on the effects of certain chemicals; it involves clean up steps; and it involves preventive measures which gain from the lessons of past mistakes to avoid chemical damages in the future. To attain this aim it is crucial to have an improved partnership with the chemical industry and the provinces, informed public opinion, a general consensus among these groups on the trade-offs they are prepared to accept between risks and benefits, and the use of this general consensus as the basis for intervention by government.

Water Management: Fresh water could be the issue of the 1990s that energy was in the 1970s. Elements of this issue include:growing imbalance between water supply and demand, particularly on the prairies; unsatisfactory water quality in the Great Lakes-St. Lawrence River System and various other parts of the country; multiple use management in the Fraser Estuary; water demands from the United States; potential major diversions between river basins and ecological zones; and water allocation conflicts amongst various users and political jurisdictions.

The Inquiry on Federal Water Policy will identify and describe by summer 1985 emerging water issues in Canada, including their "interjurisdictional dimensions" and should provide a basis for future action. The government will respond promptly to improve federal actions in this field in cooperation with the provinces.

Climate Change: The past decade and a half has demonstrated increasing worldwide climate variability. Drought in the Prairies during the early 1970s, recent mild winters in eastern Canada and tragic droughts in Ethiopia, the Sahel, India and Mexico are examples of climatic fluctuation. Increasing levels of carbon dioxide (CO_2) and other atmospheric pollutants will likely have a significant effect on climate. Because Canada is at high latitudes, it is expected to be affected profoundly by any changes that occur. To adequately prepare Canadians and their economy from the adverse effects of climatic variation, a better understanding is needed of the cause of climatic variation and the effects of increasing CO_2 and other radiatively active gases on our climate. The Canadian study program involves provinces, universities, the private sector and the federal government and is part of the World Climate Program.

The North: The Environmental uniqueness and sensitivity of the area north of 60°, its harsh climate and geography for economic development and the federal government's broad responsibilities in the territories all make the North a departmental priority. Of particular concern to the Department is conserving wildlife and park areas in the North, weather services for safety of transportation, interjurisdictional water management and active participation and contribution to the Northern Land-Use Planning Process.

The Economy: Structural readjustment linked with economic recovery is likely to produce private companies which are more competitive, innovative and less wasteful. The new technology industries may be more environmentally benign and the progressive modernization of our resource based industries will likely yield environmental benefits. New developments in science and technology in fields such as biotechnology and space will influence the issues to which the Department must respond.

The slowdown of some mega-projects provides an opportunity to develop the knowledge base necessary for their safe, economically efficient and environmentally appropriate design and operation. There may also be opportunities to encourage industry to pursue smaller scale development projects which may be more environmentally benign and more labour intensive. Departmental purchasing power and policies will be modified to increase opportunities for Canada high technology instrument industry and the developing pollution control industry.

As a part of the government's goal of deficit reduction, the department is streamlining its programs to be in a better position to carry out its mandate through clearly focused direction and more efficient organization.

Resources: The world demand for Canada's non-renewable and renewable resources including agricultural, fish and forest products will grow towards the end of the decade, provided there is purchasing power abroad and Canadian exports remain internationally competitive. The Department's water, land, weather and water information and environmental quality activities are important factors in ensuring competitiveness of Canada's resource based industries. Preservation and enhancement of soil fertility, the sustainability of yields, multiple resource use, and the loss of agricultural lands and wetlands and other wildlife are major renewable resource issues.

Intergovernmental Relations: The department will be seeking renewed partnerships with the provinces and the private sector in the management of environmental matters. Resolution of offshore jurisdictional questions will have a bearing on the protection of coastal zones and the marine environment.

Canada-U.S. relations are of particular importance because of geographic proximity and economic and ecological interdependence. Current U.S. policies have the potential to adversely affect this country's environment and basic resources.

Need for Environmental Information: The general public as well as the agriculture, fisheries, forestry, transportation, construction and energy industries require accurate, timely and accessible information on the environment in order to make sound decisions that affect the social and economic health of the nation. Information is required on weather and climate conditions, the quality and quantity of Canada's freshwater resources, the physical potential, carrying capacity and changing conditions of Canada's prime lands, and the status of migratory bird populations and threatened or endangered species, and their habitats. To help reduce the loss of life, destruction of property, damage to crops and forests, etc. improvements are required in documenting changes in the state of resources (water, land and wildlife), in forecasting atmospheric conditions (wind, sea state, rain, snow, fog, blizzards, freezing rain, hail, tornadoes, frosts, heat and cold waves, droughts, floods, ice formation and movements) and in disseminating warnings and information.

2. New Initiatives

In response to the influences noted above, the following major initiatives will commence in 1985-86.

Water Management: To improve the quality and efficiency of hydrologic research in support of better management of water supplies, a number of separate research units are being consolidated in a new National Hydrology Research Centre (NHRC) in Saskatoon. Construction of the NHRC will be completed and personnel will start to move into the new building at the end of fiscal year 1985-86. Total capital costs are estimated at $16.1 million, of which $8.4 million will be expended in 1985-86. In support of fiscal restraint, capital works under the Canada Water Act

will be carried out over a longer period of time to reduce annual expenditures by $2 million for certain flood damage control projects (see page 3-32).

Streamlining and Integrating Weather Services: AES has undertaken measures to achieve expenditure reductions and generate increased revenue. Operations will be streamlined by integrating weather services at Goose Bay, Sept Îles, Port Hardy, Prince George and Fort Nelson. This integration, as well as other measures will result in a savings of $400,000. Further reduction will be achieved through the renegotiation of a federal-provincial agreement with Quebec for climatological observations and the closure of the Eddy Point, Nova Scotia and Bissett, Manitoba weather observing stations. Moreover, the cost of providing specialized scientific services will be reduced by $200,000. In terms of revenue generation, AES will increase the charges to industry for specialized scientific services. For those people wishing weather information additional to that provided by the media, a fee will be charged for this service (see pages 3-26 and 3-27).

Wildlife Conservation: In keeping with the government framework for deficit reduction and economic renewal, reductions have been made in the Wildlife Conservation Sub-Activity. These reductions have been made to limit the federal government activities to those that fall directly under its jurisdiction. Federal government activities will be focussed on migratory birds and threatened or endangered species. Eighty-four person-years and $3.8 million have been reduced from this Sub-Activity. New arrangements are being developed with private sector groups and the provinces to operate the five wildlife interpretation centres. Both government and private contributions are being made to the Wildlife Habitat Canada Foundation, a new private sector agency which will replace the Department's habitat acquisition fund. A national conference to improve the private sector and governmental partnership in wildlife conservation is being sponsored by the Department and provincial governments. The government is working with the provinces and the private sector to improve the overall effectiveness of wildlife research in Canada. Toward this end the department will contract out wildlife and toxicology research to the universities and the private sector.

Update on Previously Reported Initiatives

The following major initiatives will continue in 1985-86.

Productivity Improvements in the Weather Service: The Atmospheric Environment Service will continue to develop and implement its long-term strategic plan to improve weather services through the continued automation and utilization of technological advances. Combined with the best use of human resources, this will permit AES to steamline its services and better serve broader interests such as fisheries, agriculture, forestry, offshore oil and gas exploration, municipalities and the general public (see page 3-27).

Acid Rain: The approach is to develop agreements with provinces and industries for reducing Canadian SO_2 emissions. Financial assistance from federal and provincial governments may be required. Continued monitoring and research will verify the efficacy of abatement measures and guide further measures. Sustained public interest in the problem and support for abatement measures is essential in both Canada and the United States. Communication of Canada's concerns about the impact of acid rain to the U.S. government continues but the U.S. Administration is not committed to acid rain control action. Negotiations of a transboundary air pollution agreement between Canada and the United States will be renewed (see pages 3-22 and 3-23).

Toxic Substances: Emphasis is being shifted from remedial to preventive action on the current priorities of pesticide management, dioxins, hazardous wastes and lead in the environment. Prevention procedures and emergency preparedness in case of chemical accidents (e.g. Bhopal, India) are being reviewed and improved in a joint government-industry effort. Regionally the focus is on the major contaminated waterways including the St. Lawrence River, the Niagara River, the Saskatchewan River and the Fraser Estuary. In addition the Interdepartmental Committee on Toxic Chemicals, chaired by Environment Canada, is developing plans of action on indoor air quality, drinking water safety and contaminants in fish (see pages 3-22 and 3-23).

The North: In support of the Northern Land Use Planning Process of DIAND, the Department will implement a program to meet DOE requirements and fulfil the DOE role. This will consist of research, information and advice, involving all departmental services. Efforts will focus on influencing the directions and priorities set for the land-use planning commissions, and the content and form of land-use plans as well as water use in the MacKenzie River Basin. In addition, the Department will examine the needs of establishing Migratory Bird Sanctuaries and National Wildlife Areas.

3. Program Effectiveness

Program effectiveness would be best demonstrated by a measure of change in the overall quality of the natural environment, continued value of the basic resources and by evaluating the contribution to the economy and to safety, of the services provided.

Specific achievements with respect to six issues which require the involvement of more than one Activity in the Environmental Services Program are as follows:

Acid Rain: Federal and provincial governments agreed to reduce total SO_2 emissions east of the Saskatchewan/Manitoba border to 2.3 million tonnes (about one half the 1980 level) by 1994. A federal/provincial working group of ministers is directing where and how emission reductions will take place and how the costs of these measures will be met. The Royal Society of Canada assessed the scientific aspects of the acid rain program and concluded that much of the work being done was of world class. The Royal Society recommended expanding the work in some areas and centralizing the management of the program.

Toxic Substances: Environment Canada's efforts have already contributed to controlling toxic chemicals. For example, regulations have been established to ban the use of polychlorinated biphenyls (PCBs) and polybrominated biphenyls (PBBs) which were used in some electrical equipment. Regulations have been established for the handling, carrying and labelling of environmentally dangerous substances and wastes, under the Transportation of Dangerous Goods Act. Techniques have been developed for the destruction of chemical wastes. Under Canadian leadership, international initiatives on standardized evaluations of chemicals prior to their introduction into trade and commerce are being put into effect. The federal government's position on dioxins was published, and a Code of Good Practice for the wood protection industry was established in British Columbia. A new regulation for lead in gasoline was formulated, and a decision was made to establish an Advisory Council on Lead in the Environment. The United States is starting to reduce toxic chemical discharges into the Niagara River, which is an indication of successful cross-boundary negotiations.

Great Lakes Clean Up: By the late 1960s the water quality of the Great Lakes had become a major public concern in North America and the world. The "death" of Lake Erie was considered imminent by many. Negotiated agreements for programs of remedial action to clean up the Lakes were signed with the United States and with Ontario in 1971 and 1972 and renewed in 1978.

Since then, pollution has been greatly reduced through the construction of sewage treatment facilities, involving more than $700 million in federal support. As a result of banning the use of mercury, fishing has been reinstated in Lake St. Clair. Some harmful substances, such as DDT, have been greatly reduced in the Great Lakes. Over the past decade, not only has the deterioration of the Lakes been drastically reduced, but many areas are showing marked improvements in drinking water quality, recreational suitability and in their ability to sustain aquatic life.

The Great Lakes cleanup is generally recognized throughout the world as a remarkable environmental success story. While toxic chemicals continue to pose serious problems, actions to address them are underway, but need strong support and continued vigilance.

Pollution Reduction: The National Air Pollution Surveillance network, covering 55 cities across Canada, indicates significant decreases in concentrations of all contaminants measured. Annual mean concentrations of sulphur dioxide decreased by 30% from 1974 to 1982, nitrogen dioxide by 25% from 1977 to 1982, and particulate lead by 60% from 1974 to 1982.

As well, Canada has remained in the international forefront of air quality research, especially in the monitoring of the stratospheric ozone layer which protects human health. These efforts led to the 1980 restrictions in the use of chlorofluorocarbons.

Environmental Emergencies: Sudden releases of hazardous materials (including oil) to water, land or air number about 3,500 annually in Canada. The Department's Environmental Emergency Program has, since 1973, been providing a coordinative focus for the national and regional efforts by many agencies, governments and industries to address these problems through response preparedness, technology development and training, and through spill prevention measures. In addition, direct support, including weather and sea state forecasts, is provided to prevent personal injury and to minimize property damage resulting from the release of hazardous materials. The frequency and magnitude of these release incidents has been held in check over the last 10 years despite significant increase in the types and volumes handled, stored and transported. The nation's industrial and government capability for spill response has increased by at least fifteen-fold since 1973. The Department's research and development efforts, especially for oil spills in cold regions, have received international recognition. Largely as a result of stimulation and support by this Department, Canadian companies now supply a substantial proportion of the world's demands for specialized spill equipment, products and services.

Flood Damage Reduction: The Flood Damage Reduction Program attempts to minimize the damages caused by floods through such means as designation of flood risk areas, flood forecast warnings and floodproofing. Flood forecasting and flood warnings are produced using data from special ice observations over rivers, rainfall statistics and on-site meteorological support to temporary flood control offices. All flood damage reduction projects are justified by means of a cost/benefit analysis. One example of the benefits of the program is the building of the floodway around Winnipeg at a cost of $65 million. It has been estimated that without this floodway, damages in 1979 could have been as high as $284 million.

Section II
Analysis by Activity

A. Environmental Protection

Objective

To influence human activities in a way that will achieve and maintain a state of the environment necessary for the health and well-being of man, the health and diversity of species and ecosystems, and the sustained use of natural resources.

Resource Summary

The Environmental Protection Activity accounts for approximately 14% of the total 1985-86 Environmental Services Program expenditures and 16% of the total person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Assessment and Response to Environmental Threats	**46,816**	**643**	62,875	693	43,928	667
Guidance and Support	**9,856**	**127**	11,303	118	12,872	122
	56,672	**770**	74,178	811	56,800	789

Approximately 61% of the 1985-86 resources will be expended on personnel costs. Expenditures on engineering research and advisory services and related professional and special services will account for a further 20%. The remaining 19% of the resources are required for normal operating expenditures such as materials, supplies, telephones and travel.

Description

The Environmental Protection Activity ensures that the federal government's responsibilities for the protection of the environment are carried out in a manner consistent with national policy. Where necessary, environmental protection measures are enforced under appropriate legislation. The Environmental Protection Activity is the focal point for contact and liaison on environmental matters with the public, industry, corresponding agencies of the provincial governments, and departments and agencies of the federal government. Specific responsibilities include site inspection, sample analysis, control measures

development, technology development and transfer, environmental emergency coordination, socio-economic impact assessment, and interpretation of the relative significance of different environmental threats. There are two Sub-Activities, Assessment and Response to Environmental Threats and Corporate Guidance and Support.

Assessment and Response to Environmental Threats: This Sub-activity develops and maintains an adequate information base for determining the status of environmental quality in Canada. It also ensures that appropriate environmental protection mechanisms are developed and implemented by those responsible in government and industry across Canada. This involves cleaning up problems, adopting better techniques, and preventing problems by incorporating environmental considerations into policies and initiatives.

Corporate Guidance and Support: This Sub-Activity develops policies, principles and management techniques for ensuring the preservation and enhancement of environmental quality, and ensures that programs are implemented in an effective and economical manner. In addition, this Sub-Activity develops strategies, management techniques and coordinates efforts across the Service and in some cases Department-wide to deal with particular environmental issues of very high priority (e.g., the toxic chemicals and long range transport of air pollutants).

Performance Information/Resource Justification

Assessment and Response to Environmental Threats: In 1985-86, this Sub-Activity will expend approximately $46.8 million and 643 person-years. Figure 6 provides additional details on the use of resources in 1985-86.

Figure 6: Application of 1985-86 Resources ($ million)

Areas of Expenditures	$	P-Y	Purpose of Expenditure	Area of Focus (ongoing concerns)
Assessment co-ordination	5.4	86	Integration of operational programs, interpretation of environmental data, and management of data inventory systems.	- identification of threats to environmental quality and their relative significance - public information reports - co-ordination of Environmental Impact Assessment (EIA) statements from DOE for EARP and Regional Screening and Coordinating Committee
Commercial chemicals	5.6	78	Assessment of chemicals, evaluation of pesticides, development of guidelines, regulations, and management of compliance and enforcement activities.	- advice to Agriculture Canada on pesticide regulation and management - Organization for Economic Cooperation and Development recommendations on new chemicals - phosphates in detergents and lead in gasoline - Environmental Contaminants Act regulations
Control of threats from specific human activities	12.3	195	Provision of technical advice, development of guidelines, codes of good practices and regulations, and enforcement of pollution control measures in various sectors of human activity such as industry, transportation and municipalities.	- offshsore oil and gas exploration and development - vehicle emissions abatement - siting of facilities - prevention and abatement of water pollution in waters of federal interest - natural resource sustained productivity
Waste management	5.1	72	Reduction of environmental and health problems from wastes in Canada; co-ordination of contingency planning and response to environmental emergencies.	- ocean dumping and safe international and interprovincial transport of dangerous wastes - hazardous federal abandoned wastes sites
Technical services	18.4	212	Provision of various technological services, such as development and demonstration of processes, management of financial incentive programs, operation of six laboratory facilities.	- transfer of environmental protection technologies to other agencies - quality assurance/quality control of analyses - vehicle emission testing and ambient urban air monitoring

Work described in Figure 6 on Assessment and Response to Environmental Threats contributes to several major issues. Plans for such major issues over 1985-86 include:

Long Range Transport of Airborne Pollutants (LRTAP): to implement a federal approach to reduce environmental and health problems from pollutants including oxidants, and to complete a study on problems in urban corridors across Canada;

The Automobile and The Environment: to provide to the general public, industry and other agencies information on environmental impacts from auto emissions and guides on automobile maintenance to reduce contamination from oxidants, lead and nitrogen oxides;

Hazardous Waste: to provide guidelines and codes of practice to responsible agencies on the management, including waste reduction and recycling, of hazardous wastes, such as for PCBs, chemical laboratories, and secure landfills;

Dioxins: to reduce dioxin in the environment by controlling wastes from specific industries and incineration sources;

Energy: to provide advice through Environmental Impact Assessments and advocacy, on offshore hydrocarbon developments on the east and west coasts and in the Beaufort Sea;

St. Lawrence River Restoration: to contribute to the Quebec program including development by 1986 of plans on five federal port facilities and a joint federal-provincial environmental emergency program;

Compliance/Enforcement: to provide guidelines and codes of practice on specific processes; to inspect and audit facilities to promote prevention or reduction of pollution; and enforce legislation where necessary;

North: to reduce environmental impacts from uranium and metal mining sites, spills and dumping in the Beaufort Sea; and

Great Lakes Quality: to complete studies for a federal-provincial-state steering committee to establish controls required to clean up waters of the Detroit, St. Clair and St. Mary's Rivers; and to review actions to reduce toxic chemicals from U.S. Niagara River disposal sites.

Guidance and Support: In addition to $6.6 million and 96 person-years for the ongoing management and common support services, this sub-activity requires $3,300,000 and 31 person-years for the Department's programs on Toxic Chemical Management, the Long Range Transport of Airborne Pollutants and Environmental Impact Assessment.

The development of a framework to improve effectiveness in compliance is also a focus of concern. Plans in 1985-86 for this Sub-Activity include:

- Long Range Transport of Airborne Pollutants

  - negotiate with provinces, "modernization agreements" for five smelters in eastern Canada;
  - assess public values and economic implications of acid rain, including estimates of damage and of control options;

- Toxic Chemical Management

  - coordinate completion of action plans on the priority issues of the Interdepartmental Committee on Toxic Chemicals (ICTC), namely dioxins, contaminants in fish, drinking water, pesticides, and indoor air quality as well as the other departmental priorities of lead, hazardous wastes and regional problems;

- Environmental Impact Assessment

  - using the EIA Studies Fund, conduct two international symposia on improving the efficiency of EIA as an early planning tool for federal projects, including improved understanding of impacts of coastal zone developments on ecosystem components; and

- compliance with environmental approaches - development of a range of methods to promote compliance with environmental quality measures. These approaches will include strengthening environmental legislation, development of methods for conflict resolution, and federal/provincial negotiation of environmental quality agreements.

B. Atmospheric Environment

Objective

To ensure that Canada has adequate information on the atmosphere, ice and sea state for the safety of life, the security of property, the greater efficiency of economic activities, and for the maintenance and enhancement of environmental quality.

Resource Summary

The Atmospheric Environment Activity accounts for approximately 53% of the total 1985-86 Environmental Services Program expenditures and 51% of the total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Weather Services	156,613	1,880	151,294	1,911	135,194	1,913
Climate Services	16,343	235	15,667	240	14,461	233
Ice Services	29,142	67	24,988	66	17,289	56
Air Quality Services and Atmospheric Research	15,153	117	12,727	191	11,641	126
Management and Common Support Services	6,236	143	4,819	93	4,090	88
Total	223,487	2,442	209,495	2,501	182,675	2,416
Less: Revenue credited to Vote	31,760	-	29,152	-	25,572	
	191,727	2,442	180,343	2,501	157,103	2,416

The revenue credited to the Vote applies to the Weather and Ice Services. With estimated 1985-86 revenues of $16,110,000 and $15,650,000, respectively, the net expenditures are $140,503,000 and $13,492,000.

In 1985-86 this Activity will also generate approximately $3,848,000 in revenue that will be credited directly to the Consolidated Revenue Fund. This total includes an additional $1,300,000 in revenue from charges to industry and the public for specialized weather and climate services. Figure 16 on page 3-47 provides additional detail on both types of revenue.

Approximately 50% of the 1985-86 AES financial resource requirement is for personnel expenditures; 10% for capital expenditures for the replacement of, and major repair to, buildings, equipment and other facilities; 9% for transportation and telecommunications expenditures; 10% for equipment rentals; and 11% for contracted services.

Description

The federal government's national weather service responds to the needs of Canadians through programs aimed at reducing the adverse impacts of weather, maximizing the economic benefits accruing from accurate prediction of weather elements, providing information on ice in navigable waters and reducing the harmful effects of human activities on the atmosphere. This Activity is delivered by the following Sub-Activities:

Weather Services: This is the major operational Sub-Activity which furnishes weather warnings, forecasts and observations to meet national and international requirements. It involves the acquisition and analysis of data; the international exchange of weather data under the World Meteorological Organization of the United Nations; the prediction of meteorological conditions; and the provision of public, marine, aviation and other weather warnings and forecasts in a timely manner to users. Also included are the development and operation of supporting systems and related research.

Climate Services: This Sub-Activity includes the acquisition, quality control, archiving, analysis and provision of climate data to users; application of climate data to socio-economic activities; the assessment of the impacts of climate change; and development of a monthly and seasonal climate prediction capability.

Ice Services: This Sub-Activity involves the observation and prediction of sea ice formation and movement in Canadian waters and the development of Canada's first iceberg service for the East Coast; archiving, analysis and publication of historical data; and consultation and advice.

Air Quality Services and Atmospheric Research (including Departmental Integrated Programs): Responsibilities include theoretical and applied atmospheric research; direction of the national scientific acid rain program; development of air quality criteria and national ambient air quality standards; acid rain, toxics and stratospheric ozone research; and participation in developing global conventions on atmospheric quality issues.

Management and Common Support Services: This involves executive direction of the Service, including management of resources, policies, planning and programs. Administrative support is also provided to other Sub-Activities.

Performance Information/Resource Justification

AES has answered an increased number of public service requests for information, from seven million in 1975-76 to approximately 16 million in 1984-85. In response, AES has provided weather services for a greater area, extended the forecast time period, improved the quality of severe weather warnings and forecasts and extended bilingual weather services. Productivity gains, through automation, computerization, other technical applications, and the astute use of human resources, have made such improvements possible. Such productivity gains have permitted AES to maintain operations with significantly lower person-year allocations and no increase in real dollar resources over the past ten years.

Changes in resourcing levels directly affect the following:

- quality and timeliness of warnings and advice;
- accessibility of weather, climate, ice or air quality information when it is needed;
- extent to which information can be tailored to clients' needs;
- accuracy of the outputs; and
- soundness of the Canadian position on national and global environmental issues.

Weather Services: In 1985-86, the Atmospheric Environment Activity will produce approximately 760,000 public, marine and aviation forecasts, as well as many specialized forecasts for economic and Department of National Defence requirements. Approximately 2,200 weather warnings for life and/or property threatening events will be issued as required. Forecasts and warnings will be disseminated without charge, primarily through mass media outlets. In addition, AES will respond to several million direct information requests for which a minimum service charge will be levied. The overall value of weather services to the Canadian economy is estimated to be $2 billion annually. Statistics indicate that over 80% of Canadians make regular use of the federal weather services.

In order to produce these outputs, the Activity operates and maintains the following:

- a data collection network (450 person-years; $36 million);
- weather forecasting centres and weather information offices (714 person-years; $30.4 million), including approximately 110 meteorologists and $8 million in support of the Canadian Forces Weather Service; and

- various support systems, including national and regional computing facilities, a major communications network, training, and related research (255 person-years; $20.3 million).

AES will continue to develop its strategic plan to improve the productivity of weather services through automation, as well as other high technology and productivity improvements. The resulting savings should enable AES to meet some of the demands for improved weather service.

New resources will also be expended in weather services to the Department of National Defence (8 person-years and $0.5 million vote-netted) and the Department of Transport (9 person-years and $0.4 million vote-netted) in support of safe aviation and marine transportation.

Climate Services: Resource expenditures will serve to acquire climatological data from approximately 2,300 voluntary climatological observing stations; maintain national climate archives of approximately 90 million records of weather and other atmospheric observations (increasing by about four million records per year); analyze, interpret and publish climate information; provide climate application and consultation services on a regional and national basis; and undertake applied studies and development work. New research efforts will be focussed on developing a monthly and seasonal forecast system and research on monitoring and determining the effects of increasing carbon dioxide on climate. Development of the hydrometeorological applications program for the new National Hydrology Research Centre will be initiated.

Ice Services: Planned expenditures will be spent on acquiring ice data from aircraft (2,600 hours), ship and shore stations; analysing and forecasting ice state and movement (approximately 1,500 forecasts); providing ice climate services for Arctic marine transportation, offshore energy development and St-Lawrence - Great Lakes shipping; and conducting applied research and development. The implementation of year-round Arctic ice and east coast iceberg analysis and forecast services will be achieved in 1987 at an additional cost of 16 person-years and $12.2 million annually. About 700 hours of new iceberg reconnaissance is planned for 1985-86.

Air Quality Services and Atmospheric Research: The Activity participates in cooperative national and international research programs; leads and coordinates the national research program on Acid Rain (LRTAP); participates in scientific activities related to toxic chemicals; examines the atmospheric transport of hazardous substances; and conducts research to monitor the stratospheric ozone layer. These programs will provide the scientific information needed for reaching national and international agreements on controls to protect the environment and information required for subsequent compliance monitoring.

Management and Common Support Services: The common management functions are related to the development and maintenance of sound management practices. Planning, policies, personnel services, program development/evaluation, control and efficiency of operations are stressed.

C. Environmental Conservation

Objective

To conserve and enhance Canada's renewable resources of water, land and wildlife and their related ecosystems, and promote their wise use in a sustainable manner.

Resource Summary

The Environmental Conservation Activity accounts for approximately 33% of the 1985-86 total Environmental Services Program expenditures and 33% of the total person-years.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Inland Waters Conservation	**99,385**	**1,098**	107,264	1,180	91,872	1,083
Lands Conservation	**6,135**	**76**	6,327	82	7,626	109
Wildlife Conservation	**24,386**	**303**	28,792	492	28,041	428
Management and Common Support Services	**7,845**	**110**	8,209	73	5,536	70
Total	**137,751**	**1,587**	150,592	1,827	133,075	1,690
Less: Revenue credited to Vote	**1,426**	**-**	1,685	-	1,334	-
	136,325	**1,587**	148,907	1,827	131,741	1,690

Of the 1985-86 financial resource requirements, 50% is for personnel expenditures; 11% is for grants and contributions, primarily under federal-provincial agreements; 13% is for capital expenditures for replacement of, or major repairs to building and equipment; 9% is for contracted services, and 5% for utilities and supplies. The remaining 12% is for transportation, communications, rental and other operating expenditures.

The revenue credited to the Vote applies to the Inland Waters Conservation ($1,026,000) and Lands Conservation ($400,000) sub-activities. In 1985-86 the Activity will also generate approximately $11,617,000 in revenue that will be credited directly to the Consolidated Revenue Fund. Figure 16 on page 3-47 provides additional detail on both types of revenue.

Description

Through the Environmental Conservation Service, the Environmental Conservation Activity endeavours to:

- ensure the conservation and wise allocation and use of international and interprovincial waters and wildlife;
- plan and manage the use of interjurisdictional renewable resources in cooperation with provinces and territories in ways that are environmentally sound, and encourage the application of environmental conservation principles for the economic and social benefit of Canadians;
- support and facilitate the best use of land and of water resources for sustained productivity and net social benefit;
- ensure that federal lands and facilities are managed in an environmentally responsible manner;
- provide, on a timely basis, data and advice related to water, land and wildlife in support of Canadian social, economic and environmental objectives;
- reduce the adverse impacts of, and the susceptibility of society and its property to environmental phenomena such as droughts, flood and damages from fauna; and
- safeguard those ecosystems and species of Canadian fauna in danger of extinction.

The Activity is carried out through the following sub-activities: Inland Waters Conservation, Lands Conservation, Wildlife Conservation and Management and Common Support Services.

Performance Information/Resource Justification

Inland Waters Conservation: This sub-activity accounts for 72% of the Activity's net expenditures and 69% of the total person-years in 1985-86. Resource requirements are largely dictated by 37 major federal-provincial and international agreements dealing with water quality, quantity and conservation.

Under the Canada Water Act and authorized by Parliamentary Committee, a public "Inquiry on Federal Water Policy" is currently underway and will report by August, 1985. The Inquiry report may well serve as the basis for the development of a federal freshwater strategy which will guide federal efforts in water management during the coming decade. The Canada Water Act (1970) provides a framework for comprehensive planning and management of the nation's water resources. With the cooperation of the provinces, water management plans have now been prepared for 30 major river basins in Canada and 19 programs to

implement these plans have been initiated. Achievements include the re-establishment of natural water levels in the Peace-Athabaska Delta and the more effective use of the limited water resources of the Okanagan Basin. In addition, a floodway has been built around Winnipeg at a cost of $65 million. Estimates indicated that without this floodway, damages in 1979 alone could have been as high as $284 million. Flood control projects have also been carried out in the Lower Fraser Valley, Montreal, and Saint John, New Brunswick.

By major area of expenditure, plans for 1985-86 include:

International and Interjurisdictional Waters: Approximately 159 person-years and $17 million are required to provide staff and technical support for over 30 Control Boards and Reference Study Committees under the International Joint Commission and 19 under federal-provincial agreements which resolve interjurisdictional water issues and supervise the management of transboundary waters. Negotiating water quality objectives (at least one per annum) for transboundary waters is a major objective.

Water Research: Approximately 379 person-years and $38 million are required to provide the scientific basis for water resource management decisions through research into quantitative and qualitative aspects of water and to address short- and long-term problems and opportunities. This research is carried out at two Institutes, the National Water Research Institute at Burlington, Ontario, and the National Hydrology Research Institute, the latter to be transferred from Ottawa to Saskatoon in 1986. Research will be carried out on the measurement, dynamics, forecasting and modelling of surface waters, hydraulics, ground waters, river ice and aquatic ecosystems. The current workload includes 157 projects relating to water and biological monitoring, development of analytical techniques, etc., and a further 48 research projects that are concerned with toxic chemicals and acid rain. Research connected with the problems of toxic chemicals and acid rain will require estimated expenditures of 164 person-years and $10 million.

Water Data: Approximately 520 person-years and $36 million are required to collect, analyse and distribute data on water levels, river discharge, sediment and water quality. Water quantity data is collected at nearly 3,500 locations across Canada and the provinces contribute approximately $4.5 million to the operating costs of about 1,700 of these stations under federal-provincial cost-sharing agreements. The hydrometric survey has installed 90 Canadian made automated data collection platforms to transmit water data from remote sites via satellite communication. Under a water quality program the Department collects, analyses and distributes water quality data (500,000 tests annually) from samples taken at 645 locations across Canada. A water quality monitoring agreement has been signed with the province of Quebec. Agreements with four more provinces are expected during 1985-86.

Flood Damage Reduction: Approximately 40 person-years and $9 million are required to undertake flood control projects and continue nonstructural methods of reducing flood damages and subsequent payments. To reduce disaster payments, flood damage reduction agreements are negotiated with the provinces and territories, under which communities are mapped to identify flood risk areas. The designation of flood risk areas and subsequent agreements relieves the federal government of any additional liability for these areas in the future. To date, some 41 designations of flood plain areas, covering approximately 300 municipalities and 7 million people, have been made. This will be further increased during the Estimates year under eight major flood damage reduction agreements.

Wildlife Conservation: This Sub-Activity accounts for 18% of the Activity's net expenditures and 19% of the total person-years in 1985-86. These resources are required to administer three federal acts on wildlife and 14 major international and federal-provincial agreements.

Forty-two National Wildlife Areas have been established to protect critical wetlands required for the maintenance of migratory bird populations. In addition, 77 sanctuaries embracing 115,000 km^2 have been established. Most are open to the public. Many are managed by advisory committees made up of representatives of federal, provincial and local governments as well as local naturalists, hunter organizations and other citizens. Under the international Ramsar Convention, 17 wetland sites so far have been designated to be of international importance; six of these are National Wildlife Areas, four are Migratory Birds Sanctuaries, two are on national parks lands and the remainder are on provincial or territorial lands.

ECS has also made substantial progress in protecting and reestablishing endangered species. Achievements include: an increase in the whooping crane population from 48 in 1967 to 144 in 1983; the successful rearing of peregrine falcons in captivity and subsequent reintroduction in areas where they had previously died out; in cooperation with Parks Canada, the successful establishment of wood bison herds in the MacKenzie Bison Sanctuary and Elk Island National Park, and at the international level, trade protection for over 160 Canadian species has been ensured under the Convention on International Trade in Endangered Species of Wild Fauna and Flora.

Planned expenditures for 1985-86 in the Wildlife Conservation Sub-Activity are:

Migratory Birds: Approximately 236 person-years and $17 million are required to discharge responsibilities under the Migratory Birds Convention Act. These responsibilities include research on some 225 migratory birds species and their habitat; regulation for, and of, approximately 440,000 hunters; and the shared management and operation of the 42 National Wildlife Areas and 77 Migratory Bird Sanctuaries. In addition, the development, in cooperation with the provinces and territories, of Waterfowl Management Plans will be continued, as will negotiations for a North American Waterfowl Management Plan; the third

year of the five-year Crop Damage Prevention Agreement with the prairie provinces will be implemented; continued support will be given to the Wildlife Habitat Canada Foundation established in 1984; joint research and management programs to protect species shared by Latin American countries will be established; and a wide range of research reports on migratory birds and their habitat will be published.

Wildlife: Approximately 67 person-years and $7 million are required for the protection and conservation of wildlife under the Canada Wildlife Act and Game Export Act. Efforts to reestablish seven endangered species, to submit a new Import/Export Act to Parliament, to establish a federal policy on wildlife and to provide leadership in the humane treatment of wildlife will continue in 1985-86. Emphasis will be placed on researching the effects of acid rain and toxic substances on migratory birds and threatened or endangered species. Expenditures for research on the impact of acid rain and toxic substances on migratory birds and threatened or endangered species are estimated at 22 person-years and $1.6 million.

Lands Conservation: This sub-activity accounts for approximately 4.2% of the Activity's net expenditures and 4.8% of the total person-years in 1985-86. Resources required, are determined by research, data and advisory needs associated with the Department's role in implementing the Federal Policy on Land Use, the Federal Land Management Principle and the DOE Renewable Resources Conservation Policy as well as land resource planning and management matters.

Planned expenditures for 1985-86 in the area of Lands Conservation Sub-Activity are:

Land Management Information: Approximately 54 person-years and $4.6 million are required to produce some 50 maps and 29 reports on various aspects of land characteristics, resource potentials, current land use and land use change under the Canada Land Inventory, Northern Land Use Information, Canada Land Use Monitoring, Ecological Land Evaluation and Canada Land Data programs; to support DIAND, the NWT and Yukon in introducing land use planning; to service approximately 13,000 requests for maps and technical reports; to undertake 20 major land data processing projects to service federal, provincial and non-governmental clients; and to define the areal extent and degree of sensitivity of Canadian terrestrial and adjunct aquatic ecosystems that are sensitive to acid precipitation. In addition, the Canada Land Data System computer operations will endeavour to increase its efficiency by 7%, as has been the annual average for the past five years, and augment its data bank by 650 maps.

Land Conservation: Approximately 22 person-years and $1.5 million are required to continue efforts to determine the causes and consequences of nationally significant land use changes and soil degradation, particularly in terms of sustainable renewable resource development, assess federal program impacts on the use of prime resource lands, and

evaluate land use planning and control techniques used in Canada. These efforts will result in the publication of "The Status of Land in Canada" report, which provides scientific reports on key land issues. In addition, support in the review of approximately 400 federal land transactions and in drafting management directives applicable to federal lands will be provided to the Treasury Board Advisory Committee on Federal Land Management, and secretariat and research services will be provided to the Interdepartmental Committee on Land to implement the Federal Policy on Land Use.

Management and Common Support Services: This sub-activity accounts for 5.6% of the Activity's net expenditures and 6.9% total person-years in 1985-86. These resources are required to provide central management, personnel services, direction and support to the other sub-activities. It includes management, personnel services, policy, planning, control, financial, administrative and drafting services. Included in the resource figures is $2.1 million for expenditures related to the Great Lakes Water Quality Agreement and $95 thousand for the James Bay Agreement. Of particular significance for the Estimates year will be coordinating the implementation of the recommendations of the World Conservation Strategy. In addition, ECS will continue to administer and promote the Department's participation in the NRC technology transfer program (Program for Industry Laboratory Projects).

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Environmental Services Program expenditures by object are presented in Figure 9.

Figure 9: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	184,730	179,965	169,760
Contributions to employee benefit plans	25,862	22,783	24,480

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 12 presents an analysis of the Environmental Services Program's capital expenditures by activity and type of asset. Figure 13 provides details on major capital projects which are those having expenditures of $250,000 or more.

Figure 12: Summary of Capital Spending by Activity ($000)

Contribution to the new employment expansion and development (NEED) program	-	1	199
Summer Canada - student employment program	-	-	11
Contributions to Canadian Universities in support of long range transport of airborne pollutants	-	26	-
	790	729	865
Environmental Conservation			
Contributions to the province of Ontario under the Canada/Ontario agreement respecting SRCPP for Timmins and the Regional Municipalities of Sudbury and Niagara	-	7,800	1,700
Contributions to provinces towards other federal-provincial water resources projects	**200**	141	-
Contributions to provinces for flood damage reduction studies and flood-risk mapping	**2,965**	1,330	2,871
Contributions to the province of Quebec - hydrometric agreement	**793**	793	586

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions (Continued)			
Contributions to the province of Ontario under the Canada/Ontario Agreement on Great Lakes Water Quality	**1,200**	1,200	1,189
Contribution to the province of Quebec - James Bay agreement	**95**	80	80
Contribution to the province of Manitoba for mercury studies in the Churchill Nelson diversion system	**50**	85	82
Contribution to the United Nations for the convention in trade of rare and endangered species	**28**	28	24
Contribution to the province of Manitoba for Red River ring dyking	**600**	500	149
Contributions to the provinces for the sewage treatment facilities construction program	-	10,000	10,216
Contribution to the province of Quebec for water quality and monitoring agreement	**197**	197	168
Contribution to the interjurisdictional caribou management board	**15**	15	15
Contributions to provinces for implementation of water planning recommendations:			
Saskatchewan - Qu'Appelle Valley	**450**	400	344
Quebec - Montreal area flood control	-	1,600	-
British Columbia - Fraser River flood control	**2,100**	4,000	4,350
- Okanagan River Basin	-	-	-
Contribution to co-operating associations program	-	10	10
Contribution to the provinces for waterfowl crop depredation	**800**	800	598
Contribution to the new employment expansion and development (NEED) program	-	274	3,118
Summer Canada - student employment program	-	-	226

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions (Continued)			
Contributions to the Province of Saskatchewan for Water Treatment Systems in Regina & Moose Jaw	3,000	2,000	-
Contributions to Fur Institute	500	395	100
Contributions to the Province of Manitoba - Delta Marsh	100	-	-
	13,093	31,648	25,826
	13,883	48,011	27,242
Total transfer payments	16,191	50,888	29,334

B. Cost Analysis

Net Program Cost

The Environmental Services Program's 1985-86 Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments, less the receipts and revenues credited to the Vote. Other cost items as well as receipts credited to the Consolidated Revenue Fund must also be taken into consideration when determining the full cost to operate the Program.

Figure 15: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Operating Expendi-tures	Add Other Costs	Total Cost	Deduct Revenue	**Net Cost**	Forecast 1984-85
Environmental Protection	56,672	6,805	63,477	-	**63,477**	79,690
Atmospheric Environment	223,487	15,575	239,062	35,608	**203,454**	190,261
Environmental Conservation	137,751	11,062	148,813	13,043	**135,770**	156,389
	417,910	33,442	451,352	48,651	**402,701**	426,340

The adjustments made to the estimated operating expenditure to arrive at a total net cost include: accommodations provided without charge by Public Works Canada ($17,415,000), Transport Canada ($839,000), and the Department itself ($11,029,000); other services provided without charge by other departments ($4,159,000); and inclusion of all revenues generated by the Program ($48,651,000).

C. Revenue Analysis

Figure 16: Revenue Sources by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenue credited to the Vote

Total revenue	**48,651**	41,204	36,953

D. Additional Information

1. Relevant Acts

The Environmental Services Program is responsible for administering the ten Acts shown in Figure 17. In addition, it is responsible for administering, or providing specific advice and information under, certain sections and provisions of the fifteen Acts shown in Figure 18.

Figure 17: Acts Administered by Environment Canada

The Canada Water Act
The Canada Wildlife Act
The Clean Air Act
The Department of the Environment Act
The Environmental Contaminants Act
The Game Export Act
The International River Improvements Acts
The Migratory Birds Convention Act
The Ocean Dumping Control Act
The Weather Modification Information Act

Figure 18: Other Relevant Acts

The Agricultural and Rural Development Act
The Animal Contagious Diseases Act
The Arctic Waters Pollution Prevention Act
The Canada Shipping Act
The Department of Indian Affairs Act
The Eastern Rocky Mountain Conservation Act
The Fisheries Act
The International Boundary Waters Treaty Act
The Motor Vehicle Safety Act
The National Housing Act
The National Parks Act
The Navigable Waters Protection Act
The Northern Inland Waters Act
The Territorial Lands Act
The Transportation of Dangerous Goods Act

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $284,065,000 in support of the 1985-86 Parks Canada Program. The remaining expenditures, estimated at $19,015,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Parks Canada Program		
20	Operating expenditures	191,264	183,283
25	Capital expenditures	89,892	113,814

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

In 1985-86 Parks Canada's continuing concerns will be the protection of the heritage resources under its administration, and the provision and maintenance of services to park visitors.

Specific targets in 1985-86 are:

- an increase of $9.2 million in revenue credited to the Consolidated Revenue Fund as a result of a revised fee structure (see pages 4-45 and 4-46);
- the second year of a three-year program for the planning and development of Mingan Archipelago National Park at a cost of $1.4 million (see page 4-25);
- the fourth year of a five year project at Batoche National Historic Park to construct a visitor reception/administration/ maintenance facility at a cost of $1.6 million (see page 4-29);
- implementation of the national plans for the celebration of the 1985 National Parks Centennial at a cost of $.6 million (see page 4-24); and
- final year of the reconstruction and re-development of the Cave and Basin Mineral Springs, birthplace of Banff National Park and the national park system, at a cost of $.5 million (see page 4-24).

The operation of the existing park system is only one facet of the Parks Canada mandate (for a listing of the national parks and national historic parks and sites and a map of the national parks, see pages 4-47 to 4-50). To fully achieve its mandate, Parks Canada will respond to opportunities to pursue the completion of the park system, including:

- negotiations on the establishment of national parks in the North (see page 4-25);
- a joint federal-provincial study on the establishment of Canada's first national marine park (see page 4-25);
- identifying the first national historic park in the Northwest Territories (see page 4-30);and

- identifying potential sites of historical interest representative of fishing on the Great Lakes (see page 4-30).

2. Financial Summary by Activity

Funding requirements for the Parks Canada Program for both the Estimates year and the current fiscal year are presented by activity in Figure 1.

Figure 1: Financial Summary by Activity ($000)

	Main Estimates 1985-86	Forecast 1984-85	Change
National Parks	**164,963**	171,791	(6,828)
National Historic Parks and Sites*	**57,509**	71,769	(14,260)
Agreements for Recreation and Conservation	**44,172**	43,687	485
Administration	**36,436**	34,998	1,438
	303,080	322,245	(19,165)
Person-years	**4,902**	5,222	(320)

*This includes $2,909,000 and 47 person-years for the National Battlefields Commission for 1985-86 and $2,866,000 and 47 person-years for 1984-85 (see Introduction, page 4-13).

Explanation of Change: The financial requirements for 1985-86 are $19.2 million (6%) and 320 person-years (6%) lower than the 1984-85 forecast. The decrease is due primarily to:

	$ Millions	Person-Years
• supplementary programs in 1984-85 not required in 1985-86, Environment 2000 and repairs resulting from storm damage;	(5.8)	(295)
• the reduction in capital development projects in existing national and historic parks including Halifax Defence Complex ($5.2 million); Les Forges du St Maurice, Grande Maison ($2.1 million); Fort Coteau du Lac ($1.9 million); Kluane Glacier access ($1.5 million); Banff, Lake Louise ($2.4 million); and other projects ($5.6 million);	(18.7)	(155)

	$ Millions	Person-Years
• the reduction in interpretive services and other operational programs; and	(.8)	(40)
• increases relating to salaries and transfers into the Parks Canada Program of Personnel Services, Word Processing and Records Management Services, previously budgeted in the Environment Canada Administration Program.	6.1	185

Explanation of 1984-85 Forecast: The 1984-85 forecast (which includes items in Supplementary Estimates B) is $5.9 million higher than the 1984-85 Main Estimates of $316 million (Extracts from Part II of the Estimates, page 4-4). Further details are contained in Recent Performance - Highlights, page 4-10.

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

The 1985-86 funding requirements for the Parks Canada Program are displayed by activity as a percentage of the total program.

B. Recent Performance

1. Highlights

Significant changes to the 1984-85 Expenditure Plan which have been funded from Supplementary Estimates or internal re-allocations are:

	$ Millions
• the implementation of a special employment program, Environment 2000, for youth and older workers which had as its objective the conservation, preservation and restoration of the natural environment and raising public awareness of the need for conservation. This program created approximately 900 jobs, each averaging 17 weeks of employment;	4.1
• the first year of a three-year program for the development of Mingan Archipelago National Park; and	2.4
• the reconstruction, repair and clean-up of park facilities destroyed by major storms and floods at Forillon, Revelstoke and Louisbourg during the fall and winter of 1983.	1.7

Highlights of the Program's performance during 1983-84 were:

- official opening of Pukaskwa National Park (see page 4-26);
- purchase of Mingan Islands at a cost of $5 million for development as a National Park (see page 4-20);
- completion of background studies on Parks Canada's role in the protection and presentation of prehistoric Indian sites (see page 4-30);
- ongoing negotiations in 1983-84 led to the establishment in summer, 1984 of Northern Yukon National Park (see page 4-20);
- major capital projects, including the Lake Louise re-development, highway reconstruction throughout the park system, restoration and repairs on the Rideau and Trent-Severn Canals and stabilization and restoration of the Halifax Defence Complex, were carried out at a total cost of approximately $33 million (see pages 4-26, 4-34 and 4-30 respectively);
- negotiations with the Province of Ontario have not as yet resulted in the establishment of a national park on the Bruce Peninsula (see page 4-20); and

- in January, 1984 the Canadian Heritage Rivers System was jointly established by Parks Canada, the Department of Indian Affairs and Northern Development, and the governments of Yukon and Northwest Territories, Newfoundland, New Brunswick, Ontario, Manitoba and Saskatchewan.

2. Review of Financial Performance ($000)

Figure 3: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
National Parks	171,383	163,478	**7,905**
National Historic Parks and Sites*	63,648	63,368	**280**
Agreements for Recreation and Conservation	43,675	48,610	**(4,935)**
Administration	33,575	28,239	**5,336**
	312,281	303,695	**8,586**

*This includes $2,727,000 and 47 person-years for the National Battlefields Commission for both the Main Estimates and Actual.

Major changes to the Parks Canada Main Estimates, requiring an additional $8.5 million of Supplementary Funding during 1983-84 were:

	$ Millions
• the purchase from Dome Petroleum Limited of 40 islands encompassing an area of 78 square kilometres known as the Mingan Archipelago;	5.0
• the participation in the Special Recovery Capital Project Program (SRCPP) for the reconstruction of Highway #4 in Pacific Rim National Park, at a cost of $1.6 million, and the repair of the walls on the St. Peters Canal, at a cost of $.2 million; and	1.8
• construction, operation, and maintenance of a water supply system for Banff Townsite in Banff National Park.	1.7

3. Overview of Program Resource Levels: 1981-82 to 1985-86

Figure 4: Five Year Resource Trend

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83	Actual 1981-82
Operating Expenditures					
Current ($ millions)	213	209	198	186	162
Constant 85-86 ($ millions)	213	217	216	214	207
Capital Expenditures					
Current ($ millions)	90	113	114	101	100
Constant 85-86 ($ millions)	90	118	124	117	128
Total Program Expenditures					
Current ($ millions)	303	322	312	287	262
Constant 85-86 ($ millions)	303	335	340	331	335
Operating Person-Years	4,654	4,834	4,541	4,614	4,463
Capital Person-Years	248	388	400	479	520
Total Program Person-Years	4,902	5,222	4,941	5,093	4,983

Over the past five years Parks Canada's resource levels have demonstrated the following trends:

- while several parks, sites and facilities have been established or expanded, Parks Canada has implemented a number of cost reduction measures in order to undertake these new responsibilities with only a minimum increase in operating expenditures;

- variations in capital expenditures are a reflection of differing levels of authorized activity. Capital expenditures show a decrease in 1985-86 as most projects relating to new development have been deferred;

- operating person-years have increased by only 4% over the past five years, approximately 3% of which is due to the decentralization of the personnel function from the Administration Program. The special employment program (Environment 2000) supplemented the program by 295 person-years in 1984-85 and accounts for the majority of the increase in that year; and

- capital person-years have declined by 52% over the past five years. The deferral of new development projects and the transfer of person-years to the operating vote to maintain new facilities are major factors contributing to this decline.

C. Background

1. Introduction

Parks Canada is the federal agency entrusted with protecting nationally significant places that are representative of Canada's natural and cultural heritage. Currently Parks Canada administers 31 national parks, 82 national historic parks and major historic sites, nine heritage canals, four Canadian heritage rivers and two co-operative heritage areas; located in every province and territory (see pages 4-47 to 4-50). In addition, the Program has erected approximately 900 plaques and monuments, and contributed to the protection of 37 sites of historical significance through cost-sharing agreements with provincial and municipal governments and private non-profit organizations.

The National Battlefields in Quebec City are the responsibility of the National Battlefields Commission, a Crown corporation established by Act of Parliament in 1908. Effective September 1, 1984, under the proposals contained in Bill C-24, the National Battlefields Commission changed from a Schedule C to a Schedule B Corporation under the Financial Administration Act. While the Commission's vote is grouped with the Parks Canada Votes, the Commission in fact reports directly to Parliament through the Minister.

The national parks cover roughly 140,000 square kilometres. The physical assets (not including lands) of Parks Canada are valued at $3.5 billion. Across the country approximately 25 million visits were made to Parks Canada locations in the 1983-84 fiscal year. At each of these locations, Parks Canada staff ensure the conservation of outstanding natural features or historical structures/artifacts; provide orientation and interpretation programs for park visitors; and, in the case of national parks, accommodation and recreational facilities such as campgrounds, picnic areas, and trails.

Parks Canada operations and development are governed by:

- the Parks Canada Policy approved by Cabinet in 1979, which establishes in general terms what development can take place in the parks and what services are to be provided to the public;

- the systems plans for national parks and national historic parks and sites. The National Parks Systems Plan divides Canada into natural regions and identifies heritage resources that are representative of each. The Historic Park Systems Plan divides Canada's history into themes. Both systems plans are used to determine candidate heritage places for inclusion in the park system and the purpose for each park; and

- a management plan specific to each individual park, or interim management guidelines if the management plan is not yet

completed. The management plan, based on extensive public consultation, is a detailed statement of how the Parks Canada Policy will be applied and how the park will be developed and operated to fulfill its purpose in relation to the Systems Plan.

2. Legal Mandate

Parks Canada's legal mandate dates from 1887 when the Government of Canada passed its first heritage protection legislation, the Rocky Mountain Parks Act, and thereby established the principle of public ownership of Canada's outstanding scenic resources. The legislative context in which Parks Canada operates today is set out in the National Parks Act (R.S. 1970 c. N13 amended by 1974 c.11), the Historic Sites and Monuments Act passed in 1953; the National Battlefields Commission Act; and the Transportation Act under which regulations governing the heritage canals are developed.

3. Program Objective

The objective of the Parks Canada Program is "to acquire and develop representative areas of the country, for use by the public consistent with the preservation of such areas in their natural state; to preserve, restore and operate sites, structures, and travel routes of importance to Canadian history".

This objective presents Parks Canada with the dual task of protecting heritage places and presenting them to the public for their understanding, appreciation and enjoyment.

The objective is achieved by the operation of the existing national system of parks, and by the extension of protection to nationally significant resources as yet unrepresented in the system. Since the achievement of one is often possible only at the expense of the other, the right balance must be struck in allocating resources.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 5, the Parks Canada Program is divided into four activities which reflect the types of facilities operated by the Program: National Parks, National Historic Parks and Sites, Agreements for Recreation and Conservation (ARC) and Administration.

Figure 5: Activity Structure

Each activity, except Administration, has five sub-activities:

Resource Conservation: the acquisition and inventorying of heritage resources; the implementation of plans to manage the resources, such as the stabilization or reconstruction of historical structures; monitoring of the condition of the resources; and the enforcement of laws and regulations to protect them;

Interpretation and Visitor Services: the provision of programs to encourage visitor understanding, appreciation and enjoyment of the national heritage, and the provision of services necessary to allow visitors to use the parks;

Provision and Maintenance of Visitor Facilities: the construction of facilities such as roads, buildings, trails, etc., and the maintenance of these facilities to facilitate visitor access, use and understanding of the parks;

Policy, Planning and Research: the research and planning undertaken to identify and select the most significant heritage resources, and to provide the information and policies needed to guide the protection and interpretation of the resources in particular and the development and operation of the parks in general; and

Park Management: the on-site direction and control of the day-to-day operation of the parks.

Organization Structure: There are three levels of operation in the Program; national, regional and park.

National: National headquarters, located in the National Capital Region, is responsible for legislative and policy development, systems planning, the monitoring of program and policy implementation, and most of the communication with Parliament.

Regional: Five regional offices co-ordinate the planning and operation of all Parks Canada field locations. Facilities in Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland are directed by the office in Halifax; those in Quebec by the Quebec City office; those in Ontario by the Cornwall office; those in Manitoba, Saskatchewan, Yukon and Northwest Territories by the Winnipeg office; and those in Alberta and British Columbia by the Calgary office.

Park: At the park level, the Program is currently delivered through 31 national parks, 82 major national historic parks and sites, nine heritage canals, four Canadian heritage rivers and two co-operative heritage areas.

An Assistant Deputy Minister is accountable for the management of the Parks Canada Program. He has direct responsibility for strategic planning, new park establishment and new initiatives, and external and corporate relations. The Chief of Operations, located at headquarters, is responsible to the Assistant Deputy Minister for all ongoing operations. All Regional Directors and Activity Directors at headquarters (except the Program Policy Advisor) report to the Chief of Operations. In most operational areas, authority is delegated to the Regional Directors. All Park Superintendents in a region report to the Director of that region.

Figure 6 relates the Program's organizational structure to its activities and resources required for 1985-86.

Figure 6: 1985-86 Resources by Organization/Activity ($000)

D. Planning Perspective and Performance Review

1. Environment

The conduct of Parks Canada's responsibilities is influenced by several factors including the use of natural resources, general economic conditions, tourism, and inter-governmental relations.

Threats to Heritage: Canada's natural resources remain key elements in the growth of the Canadian economy. This means that in some locations there can be tension between economic use of an area and its conservation for unique natural and cultural heritage values. Such tensions can best be resolved by extensive public consultation and debate. Many of the natural regions and historic sites not currently represented in the Parks Canada System are located in remote areas in Yukon and Northwest Territories. The public and governments concerned should be made aware of the conservation and parks value of specific areas so that these values can be weighed carefully in setting aside new northern areas for conservation purposes.

Urban growth and re-development can present a threat to Canada's archaeological, cultural and architectural heritage. Each year approximately 25,000 dwellings are abandoned or destroyed, downtown areas are re-developed, buildings renovated and new roads constructed. To fulfill its mandate, Parks Canada will be expected to continue to respond to the potential loss of significant cultural heritage resources through new initiatives and continued support for historical research.

Economic Conditions: As part of the government's goal of deficit reduction, Parks Canada will defer most new developments in existing parks. These restraint measures come at a time when an increase in visits to parks is forecast and when the need to maintain existing levels of service is therefore heightened. Consequently, Parks Canada will continue to emphasize productivity improvements and the optimum use of existing resources.

The National Parks Centennial is an opportunity for the development of new strategies to conceive a future for our national system of parks and historic sites that will be different from what we have foreseen to date: one that protects and enriches the quality of our environment by relying more on private initiatives and provincial partners.

Tourism: While medium-term forecasts (1984-88) do not indicate an improvement in Canada's present travel account deficit of $2.1 billion, the delayed effect of the devalued dollar and the decline in personal disposable income should serve to increase tourism in Canada during 1985-86. Although tourism is not a direct responsibility of Parks Canada, the national parks and national historic parks and sites, by their very existence, contribute significantly to domestic and foreign travel in Canada. Nearly 60% of all national park visits are made by people living within 80 kilometers or less of a national park. Foreign visitors are attracted to parks north of 60° and to parks such as Banff and Jasper.

In 1982-83 spending by visitors to Parks Canada locations and by the Parks Canada Program created an estimated 24,000 person-years of employment in the private sector in addition to Parks Canada's own 5,093 person-years. For that same period, Parks Canada's full contribution (direct, indirect and induced) to the Gross Domestic Product, through Parks Canada's and park visitors' spending is estimated at $821 million.

Economic conditions, the importance of the tourism industry in Canada and Parks Canada's contribution to it, will continue to place pressures on Parks Canada to provide for tourism while continuing to fulfill the basic responsibility of protecting and presenting Canada's natural and cultural heritage.

Park and Site Visitation: Visits to the Parks Canada system are expected to increase by 3.4% in 1985-86. The effect of the devalued dollar in attracting both foreign and domestic visitors will largely be experienced in 1985-86. This effect and the additional 500,000 visits expected because of the planned National Parks Centennial events will increase visits to national parks, and historic parks and sites in 1985-86 from an estimated 25.7 million to 26.6 million.

Proposed increases in the entry fees will not necessarily have a negative impact on these projections. It is possible, however, that increased user fees for camping, golfing, swimming and dockage could result in a short-term decline in participation in these activities at park locations. This is particularly the case where attractive alternatives exist elsewhere.

This overall increase in visits will place further strain on existing facilities and services. In Alberta and British Columbia 13% of all facilities already operate at total capacity during peak periods. Conservative trend line projections show that by 1993 the number of visits will increase to 29.1 million from 25.3 million in 1983.

Inter-governmental Relations: The department will be seeking renewed partnerships with the provinces and the private sector in the management of environmental matters. Provincial governments continue to be concerned about potential economic loss due to the transfer of lands to the Crown for national park purposes. Governments at all levels, local residents and a variety of organizations are interested in the social and economic implications of new park and site proposals. Consequently Parks Canada will be expected to continue consulting with governments, organizations, and residents affected by such proposals.

Due to the expected devolution of powers to the territorial governments, the next few years remain criticial for the completion of the national park system north of 60°.

Native Land Claims: Land claims settlements are in fact advancing the process of park establishment in the North, as is evident in the discussion of northern park initiatives on this page. National parks are generally viewed by native peoples as positive assets since they guarantee protection for traditional hunting, trapping, and fishing.

2. Initiatives

There are no changes in the inherent nature, direction or operation of the Parks Canada Program planned for 1985-86 but during this Centennial Year, extensive public consultations will be undertaken to review policies and chart a course for the future.

3. Update on Previously Reported Initiatives

The Program's prior initiatives were pursued with the following results:

Northern Parks: Parks Canada carried out fruitful negotiations in the North, aimed at the establishment of new northern national parks. In July 1984, the north slope portion of the proposed Northern Yukon National Park was established. An agreement in principle to establish the southern portion of the proposed national park resulted from land claims settlement negotiations with the Council of Yukon Indians.

In the Northwest Territories, negotiations are continuing on the establishment of a national park on Ellesmere Island. As a result of Parks Canada's participation in the Tungavik Federation of Nunavut native claim negotiations, an agreement in principle was signed in July, 1983, providing for three national parks within the claim area. As a result of the Committee for Original Peoples' Entitlement (COPE) native claim settlement in June, 1984, provision was made for the future creation of two Canadian landmarks;

Bruce Peninsula: Negotiations on the establishment of a national park on the Bruce peninsula were held with Ontario. Parks Canada and the province have prepared a joint response to the public addressing the issues and concerns raised by them;

Mingan Archipelago: The Mingan Archipelago, long recognized as having national park potential, was purchased in 1983 at a cost of $5 million. In June, 1984, Bill C-53 was passed, creating Mingan Archipelago National Park, and interim funding was approved for the management of the lands and planning for their development;

National Parks Centennial: Planning for the National Parks Centennial in 1985 is well advanced. Both the National Parks Centennial Citizens' Committee and the federal inter-departmental committee are in place, as well as a variety of other government and non-government committees at the national, regional and local park level. Some 1,200 separate National Parks Centennial activities and events have been planned;

Asset Inventory: The Asset Inventory and Condition Study report, providing comprehensive information on the state of repair and life span of all Parks Canada's assets, was completed and is the basis for the Program's Long-term Capital Plan;

Maintenance Management System: The Parks Canada Maintenance Management System which establishes maintenance standards and productivity measures for all Parks Canada facilities is now, as planned, in use in over 50% of Parks Canada's operations;

Work Planning System: A formal Work Planning system is now in effect which will better enable Parks Canada to plan, measure, and report on its workload, relationship of workload to resources and on its performance; and

Other: In 1983-84 Pukaskwa National Park and Motherwell Homestead National Historic Park were officially opened; Wood Buffalo National Park was named to the World Heritage List; and the Canadian Heritage Rivers System Board was set up.

4. Program Effectiveness

The effectiveness of the Parks Canada Program must be assessed on the basis of how well it fulfills its dual task of protecting Canada's natural and cultural heritage and presenting it to the public.

Protection: In terms of protection, the extent to which Canada's heritage is represented by the park system is the prime measure of program effectiveness. At present, approximately 50% of the natural regions are represented in the National Parks System. Similarly, of the 63 themes in Canadian history identified by Parks Canada, approximately 60% are represented in the National Historic Parks and Sites System.

Presentation: The simplest measure of the effectiveness of the presentation of heritage resources to the public is the number of park visits. National parks and national historic parks and sites received approximately 25 million visits in 1983-84 and through on-site interpretive programs, contacted approximately one half of the visitors.

Parks Canada's television clips, films, publications, public lectures and school programs bring Canada's nationally significant heritage resources to audiences at home who, in some cases, have yet to visit a national park, national historic park or site, or heritage canal.

Section II
Analysis by Activity

A. National Parks

Objective

To protect for all time representative natural areas of Canadian significance in a system of national parks, and to encourage public understanding, appreciation and enjoyment of this natural heritage so as to leave it unimpaired for future generations.

Resource Summary

The National Parks Activity will account for approximately 54% of the Parks Canada Program expenditures in 1985-86 and 53% of the total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Resource Conservation	17,405	405	17,472	419	16,198	402
Interpretation and Visitor Services	15,402	480	16,596	554	15,104	487
Provision and Maintenance of Visitor Facilities						
Operating	44,275	1,158	41,169	1,270	37,845	1,119
Capital	55,160	138	64,066	200	70,609	227
Policy, Planning and Research	4,700	21	4,876	25	4,630	21
Park Management	28,021	380	27,612	374	26,997	366
	164,963	2,582	171,791	2,842	171,383	2,622

Personnel costs are 49% of the total, while capital expenditures account for 33%.

Past Financial Performance

Figure 8: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Resource Conservation	16,198	16,045	153
Interpretation and Visitor Services	15,104	13,753	1,351
Provision and Maintenance of Visitor Facilities			
Operating	37,845	34,390	3,455
Capital	70,609	64,653	5,956
Policy, Planning and Research	4,630	2,890	1,740
Park Management	26,997	31,747	(4,750)
	171,383	163,478	7,905

Changes between the actual expenditures and the Main Estimates for the National Parks Activity in 1983-84 are discussed in Review of Financial Performance, page 4-11.

Description

National parks are areas representative of the major natural environments in Canada. Each park preserves unique or classic examples of distinctive scenery, flora and fauna that are nationally significant. The parks provide opportunities for Canadians to visit, learn about and enjoy their natural heritage. In each national park a balance is sought between wilderness preservation and visitor use in order to ensure the continued protection of heritage resources and their enjoyment by future generations.

The protection and presentation of Canada's natural heritage is carried out by five sub-activities:

Resource Conservation which undertakes the purchase of lands for park development; resource management through the preparation of policies, plans, and inventorying and monitoring of resources; and law enforcement and public safety programs.

Interpretation and Visitor Services which welcomes and orients the visitor to the park, issues permits and collects revenue; provides both staffed and unstaffed interpretation programs (evening theatre programs, signs, exhibits, brochures, self-guiding trails) to enable the visitor to understand the park's heritage resources; carries out an extension program which takes the park interpretation program outside the park to

neighbouring communities, schools and various organizations and clubs; and provides basic accommodation, mainly campgrounds, including semi- and fully-serviced sites, primitive campgrounds and group campgrounds.

Provision and Maintenance of Visitor Facilities which constructs and repairs access roads, scenic pull-offs, campgrounds, visitor reception centres, day-use and picnic areas, and hiking trails to enable the visitor to use and enjoy the park's heritage resources; and those facilities required in the day-to-day running of a park, such as administration buildings, staff housing, municipal services in the townsites, and vehicles and equipment.

Policy, Planning and Research which identifies and selects new national parks, within the context of the overall system plan, and negotiates acquisition of new park lands; prepares National Parks legislation, regulations, policies and guidelines for the wise and responsible use of Canada's nationally significant heritage; and develops management plans for the individual national parks, detailing how the Parks Canada policy will be applied and how the park will be operated to fulfill the purpose set out for it in the system plan.

Park Management which is responsible for on-site direction and control of the day to day operation of the individual national parks.

Performance Information/Resource Justification

In 1985-86 the National Parks Activity will expend 2,582 person-years and $165 million to protect 140,000 square kilometres of park lands and the heritage resources within them; to provide interpretive programs to over 8,000,000 visitors; to provide recreational facilities and over 1,500,000 camper nights; to maintain $2.5 billion worth of capital assets, including 2,000 kilometres of roads; to identify, select, and plan national parks; and to manage the existing national parks.

Major goals for the National Parks Activity in 1985-86 are:

- the celebration of the National Parks Centennial, including Prince Philip's opening of the re-constructed Cave and Basin Mineral Springs, birthplace of Banff National Park and the National Park system; the holding of the Canadian Assembly on National Parks and Protected Areas, the culmination of 18 months of workshop meetings by regional caucusses; the appearance at all major fairs and exhibits of the National Centennial Exhibit, which commemorates not only Parks Canada's heritage places, but all contributions to heritage conservation; the premiering of four made-for-television films featuring important aspects of our historical and cultural heritage; and 1,200 local and regional Centennial events;

- negotiations with the Government of the Northwest Territories to establish one new national park, as well as discussions with local people on the feasibility of establishing two other national parks in the Northwest Territories;

- the second year of a three-year $4.2 million program for the initial planning and development of Mingan Archipelago National Park. In 1985-86, $1.4 million will be spent on the protection of the archipelago's natural resources, ensuring the safety of the visiting public and on the completion of studies required for the preparation of the park management plan;

- major highway reconstruction and paving projects on Highway 430S in Gros Morne National Park and on the Cabot Trail in Cape Breton Highlands National Park which will entail a cost of $7 million in 1985-86; and

- the public assessment phase of the feasibility study of establishing a national marine park in the West Isles area of the Bay of Fundy.

The 1983-84 highlights of the National Parks Activity were pursued with the following results:

- the park management plan for St. Lawrence Islands National Park is being revised in light of the current economic restraints. The plan for Nahanni is still pending. Public consultation is continuing on the comprehensive plan for the block of mountain parks. Work on the Georgian Bay Islands plan has been postponed pending negotiations on the establishment of a national park on the Bruce Peninsula. The Cape Breton Highlands and Kouchibouguac Plans have also been deferred;

- the amendments to the National Parks Act are currently being drafted into legislation;

- planning for the National Parks Centennial is discussed on page 4-20;

- the mountain park ecological land classification study has been completed for Banff, Jasper and Yoho and is in progress for Kootenay, Revelstoke, Glacier, and Waterton Lakes National Parks;

- progress on the establishment of northern national parks and a national park on the Bruce Peninsula is discussed on page 4-20;

- Pukaskwa National Park was officially opened in 1983-84. All projects planned for the opening were completed. Of the approximately $2 million projected for the minimum development program in 1983-84, only $1.3 was spent. This was primarily the result of the acceleration in 1982-83 of the construction of the administration/maintenance complex, completed in 1983-84;

- the Larson Ranch (approximately 130 square kilometres) was acquired in early summer 1984, for the newly established Grasslands National Park, at a purchase price of $1.1 million; and

- major capital projects were undertaken in 1983-84 to restore park facilities. These included the re-development of essential services at Lake Louise at a cost of $5.5 million; major reconstruction of Cave and Basin mineral springs, Banff, to re-open it for the National Parks Centennial, entailing an expenditure of $6.7 million, and reconstruction, re-paving and in some cases re-aligning of 168 kilometres of main park access roads, costing $18 million.

B. National Historic Parks and Sites

Objective

To protect for all time historic resources at places associated with persons, places and events of national historic significance in a system of national historic parks, and to encourage public understanding, appreciation and enjoyment of this historical heritage so as to leave it unimpaired for future generations.

Resource Summary

The National Historic Parks and Sites Activity will account for approximately 19% of the Parks Canada Program expenditures in 1985-86 and 21% of the total person-years.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Resource Conservation	4,150	78	4,269	84	4,002	78

National Battlefields Commission	2,727	2,727	0
	63,648	63,368	280

Changes between the actual expenditures and the Main Estimates are detailed on page 4-11.

Description

National historic parks and sites are those locations which commemorate persons, places and events declared of national significance by the Minister responsible for Parks Canada on the recommendation of the Historic Sites and Monuments Board of Canada.* The locations afforded recognition by a plaque or monument are termed national historic sites. Locations where the historical resources are fully protected, managed and interpreted in their original place and in an authentic setting are called national historic parks.

The protection and presentation of Canada's cultural heritage is carried out by five sub-activities:

Resource Conservation which is responsible for the acquisition of the historic resources, the management and monitoring of the site and structures to ensure their historical integrity, and artifact conservation to preserve the artifacts derived from archaeological research or required for use in interpretive programs;

*The current budget for the Board is $212,000.

Interpretation and Visitor Services which welcomes, orients and provides information to visitors; provides public safety and law enforcement at the site; communicates the history and significance of the site to the visitor through guided tours, animation programs, period furnishings, exhibits and/or audio-visual programs; and reaches audiences outside the parks through publications and films;

Provision and Maintenance of Visitor Facilities which includes the design, construction, and maintenance of contemporary park facilities as well as the stabilization, restoration and reconstruction of historical structures. This sub-activity is also responsible for operating and maintaining all the buildings, vehicles, and equipment needed in the day-to-day operation of the sites;

Policy, Planning and Research which is responsible for the identification and selection of the most appropriate historic resources, the documentation of their significance, and the provision of essential information and direction to guide their preservation, development and interpretation; and

Park Management which is the on-site direction and control of the day-to-day operation of the 82 national historic parks and major historic sites.

Performance Information/Resource Justification

In 1985-86 the National Historic Parks and Sites Activity will expend 1039 person-years and $58 million to conserve approximately 4,000 artifacts; provide information to 5,000,000 visitors at 59 orientation/information outlets; offer direct contact interpretation programs to approximately three-quarters of the visitors; operate and maintain 559 buildings, 90 kilometres of road, 102 kilometres of trails and 54 hectares of picnic areas; research and prepare plans for historic parks and sites; and manage 82 major national historic parks and sites.

Major plans for this Activity in 1985-86 include:

- the fourth year of a five-year, $4.4 million project to provide Batoche National Historic Park with a visitor reception/administration/maintenance facility. The expenditure of $1.6 million in 1985-86 will essentially complete this project so that it can be opened in 1985 to commemorate the centennial of the Northwest Rebellion and of Canada's national parks;

- a recommendation by the Historic Sites and Monuments Board on the establishment of the first national historic park in the Northwest Territories, pending the Board's own recommendation regarding the commemoration of the "Arctic Whaling Theme" in the Cumberland Sound area of Baffin Island;

- site identification and evaluation studies to determine the potential for the establishment of a national historic park to represent the theme of "Commercial Fishing on the Great Lakes"; and

- a study on how to improve the effectiveness of cost sharing agreements as a means of protecting nationally significant historic resources, and a priorization of cost-sharing initiatives.

Major plans for 1983-84 were pursued with the following results:

- progress on the implementation of the policy on federal heritage buildings has been slow. Since the federal heritage buildings review office has yet to be formally established, it is currently operating on an ad hoc basis only;

- progress has been made on the research, planning and protection of prehistoric Indian sites including Whitefish Island, Peterborough Petroglyphs, Manitou Mounds and the Cummins Site in Ontario; and Nootka, Metlakatla Pass, and Kitselas in British Columbia. Studies were also completed that fully document Parks Canada's work to date on prehistoric Indian sites, the implications of this work, and the issues impeding progress. These will form the basis of the policy options and alternative strategies for Parks Canada's future involvement with these sites, to be reviewed in 1985-86;

- to commemorate the Loyalist Bicentennial in Ontario, Quebec, Nova Scotia and New Brunswick, Parks Canada spent a total of $.4 million on three travelling exhibits, a play and a film about the Loyalists, and two outdoor exhibits which will remain on permanent display in Shelburne, Nova Scotia and Saint John, New Brunswick; and

- the major projects of the capital program - stabilization and restoration work at the Halifax Defence Complex, restoration and period landscaping at the Quebec Fortifications, and work on the reception centre at Batoche - were completed within budget.

C. Agreements for Recreation and Conservation

Objective

To protect significant natural and cultural resources within certain heritage areas and to encourage public use, understanding and recreational enjoyment of such areas by acting in conjunction with other governments, organizations and individuals through agreements for recreation and conservation; to recognize and protect the heritage and recreational values of Canada's outstanding rivers by their inclusion in the Canadian Heritage Rivers System; and to protect for all time the heritage resources of certain federally operated canals and to operate these canals for recreational use.

Resource Summary

The Agreements for Recreation and Conservation Activity will account for approximately 15% of the Parks Canada Program expenditures in 1985-86 and 14% of the total person-years.

Figure 11: Activity Expenditures ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Interpretation and Visitor Services	7,315	7,084	231
Provision and Maintenance of Canal Facilities			
Operating	8,864	8,520	344
Capital	20,373	23,823	(3,450)
Policy, Planning and Research	1,300	1,647	(347)
Park Management	5,248	7,065	(1,817)
	43,675	48,610	(4,935)

Significant changes between the actual expenditures and the Main Estimates for the Agreements for Recreation and Conservation Activity, in addition to those identified on page 4-11, are a result of:

	$ millions
• a savings on the Rideau Canal as a result of the successful contract bid for restoration and repairs on the canal being lower than initially anticipated; and	(1.3)
• a reduction as a result of delays in the construction of bridge No. 8 on the Lachine Canal and of the Visitor Reception Centre at Le Vieux Port de Québec.	(.8)

Description

Agreements for Recreation and Conservation (ARC) administers two different types of heritage areas. A co-operative heritage area is an area containing natural and/or cultural resources of Canadian significance that is owned, operated and maintained collectively by several agencies. Parks Canada's involvement in these areas is in the interpretation, restoration, visitor services and information programs. ARC also manages, protects and interprets certain heritage canals. These were transferred to Parks Canada from Transport Canada in 1972 in recognition of their increasing recreational role and their significance as examples of early engineering technology in Canada.

The objectives of the Agreements for Recreation and Conservation activity are achieved through five sub-activities:

Resource Conservation which acquires, inventories, monitors and manages an area's heritage resources and carries out the preservation and restoration of artifacts associated with the heritage area;

Interpretation and Visitor Services which is responsible for the operation of the locks and bridges to allow recreational boaters to use the heritage canals and for the provision of orientation and interpretation programs. These include guided tours, animation programs, brochures, audio-visual programs and extension programs to bring the heritage areas to the non-visiting public. This sub-activity also supervises visitor use to ensure both public safety and protection of the heritage resources;

Provision and Maintenance of Canal Facilities which stabilizes, restores, reconstructs and maintains the canals and associated historic structures and, as well, provides and maintains contemporary visitor facilities.

There are two additional responsibilities attached to the upkeep of the canals: maintaining the navigational aids along the canals (buoys, channel clearing) and maintaining the water levels in the watershed area through the operation of dams and weirs;

Policy, Planning and Research identifies and selects candidate co-operative heritage areas, provides information to guide their protection and interpretation, and negotiates with the provinces and others on the administrative arrangements for the management of such areas. This sub-activity also develops policies, regulations, directives and management plans to guide the operation of the heritage canals; and

Park Management which is the on-site direction and control of the day-to-day operation of the nine heritage canals.

Performance Information/Resource Justification

The Agreements for Recreation and Conservation Activity in 1985-86 will expend 697 person-years and $44 million to carry out approximately 40,000 bridge operations and 180,000 lock operations to permit the passage of approximately 350,000 boats; contact approximately 1.3 million visitors in boats; operate and maintain the heritage canal system which includes 224 bridges and locks, 300 buildings, 2000 navigational aids, and 167 dams; research and plan co-operative heritage areas; and to manage the nine heritage canals.

Figure 13: The Heritage Canal System

Canal	River	Province	Length (km)	Locks	Bridges
Rideau	Rideau	Ontario	198.8	49	41
Trent-Severn	Trent-Severn	Ontario	387.1	45	60
Sault Ste. Marie	Great Lakes	Ontario	1.9	1	2
Ste. Anne	Ottawa	Quebec	0.6	1	0
Carillon	Ottawa	Quebec	0.8	1	0
St. Ours	Richelieu	Quebec	0.2	1	0
Chambly	Richelieu	Quebec	19.0	9	12
Lachine	St. Lawrence	Quebec	13.7	0	0
St. Peters	Bras d'Or Lake	Nova Scotia	0.8	1	1

Major plans for 1983-84 were pursued with the following results:

- major rehabilitation of the Rideau (see page 4-32) and Trent-Severn Canals and of the Lachine Canal proceeded essentially as planned; and

- in the Red River Co-operative Heritage Area, difficulties in negotiating the necessary land transfer prevented the construction of the planned $1.7 million Visitor Reception Centre. To fulfill Parks Canada's $1.7 million commitment to the federal-provincial agreement, various other projects in the heritage areas were accelerated and are now complete, including the St. Boniface Dock, rehabilitation of the River Road, restoration of the St. Andrews Rectory, and waterfront development at Selkirk.

D. Administration

Objective

To provide management and support services to the National Parks, National Historic Parks and Sites and Agreements for Recreation and Conservation Activities at headquarters and regional levels.

Resource Summary

The Administration Activity will account for approximately 12% of the Parks Canada Program expenditures in 1985-86 and 12% of the total person-years.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Executive Management	**4,900**	**74**	4,860	74	4,642	73
Program Planning						
Operating	**9,770**	**137**	9,681	138	9,246	137
Capital	**3,768**	**5**	4,410	4	4,361	5
Finance and Administration	**17,998**	**368**	16,047	250	15,326	258
	36,436	**584**	34,998	466	33,575	473

Personnel costs are 60% of the total.

Past Financial Performance

Figure 15: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Executive Management	4,642	4,428	**214**
Program Planning			
Operating	9,246	8,816	**430**
Capital	4,361	381	**3,980**
Finance and Administration	15,326	14,614	**712**
	33,575	28,239	**5,336**

Changes between the actual expenditures and the Main Estimates for the Administration Activity resulted from the following:

- in 1983-84, the cost of furniture, equipment and other related capital expenditures was reported under the Administrative Activity, whereas the budget was identified in the other three activities.

Description

The Administration Activity can best be described in terms of its three sub-activities:

Executive Management: The senior executives at headquarters and regional levels (the Assistant Deputy Minister and Chief of Operations and their support staff, the Director General and Activity Directors at headquarters and the five Regional Directors) are included in this sub-activity. Executive Management directs and controls the planning, development and operation of the national parks, national historic parks and sites and ARC heritage areas;

Program Planning: Staff in this sub-activity coordinate all of the program planning processes necessary for the identification, securing and allocation of resources to achieve the Program's objectives. They also plan program content and analyze the achievements of the Parks Canada Program; and

Finance and Administration: This sub-activity entails general administration services including personnel, materiel management and the acquisition, control, administration and reporting on the asset inventories, financial and person-year resources allocated to the Parks Canada Program.

Performance Information/Resource Justification

The main determinants of resource requirements for this Activity are: the size of the Program's budget and the number of staff employed, the regional diversity and decentralization of the program's operations, and the large number of disparate functions which the program undertakes to fulfill its objectives. As shown in Figure 16, the proportion of the Program's budget allocated to the Administration Activity has remained relatively constant in the past. The slight increase in 1985-86 is the result of the decentralization of the personnel and word processing functions to the Parks Canada Program from the departmental Administration Program.

Figure 16: Percentage of Parks Canada's Resources Allocated to Administration

Highlights of the Administration Activity during 1983-84 were:

- the formal review to establish the adequacy of current levels of service and current resourcing was completed in May, 1983 and the report published in August, 1983. The review identified both resources available for re-distribution and areas of the Program requiring additional resourcing for effective performance. The review team concluded that there was a resource deficit in Parks Canada's budget; and

- for a description of the progress made on the Work Planning System, the Asset Inventory and Condition Study Report, and the Maintenance Management System see "Update on Previously Reported Initiatives", page 4-20.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 17: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	135,821	129,112	120,159
Contribution to employee benefit plans	19,015	16,304	17,840

Note: The person-year columns display the forecast distribution of the authorized person-years for the program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 19: Allocation of Capital Budget ($000)

Total Transfer Payments	3,795	2,748	3,755

5. Cost Analysis

Parks Canada's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered when describing the Program on a full cost basis. These include accommodations provided without charge by Environment Canada ($3,264,000) and Public Works ($7,371,000) and other services provided without charge by other departments ($4,250,000). Revenues generated by Parks Canada that are credited directly to the Consolidated Revenue Fund ($31,415,000) also have to be considered. Figure 22 shows the estimated net cost of the Program by activity for 1984-85 and 1985-86.

Figure 22: Net Cost of Program by Activity ($000)

	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Forecast 1984-85
National Parks	164,963	8,038	173,001	28,736	144,265	160,005
National Historic Parks and Sites	57,509	2,828	60,337	802	59,535	74,486
Agreements for Recreation and Conservation	44,172	2,233	46,405	1,266	45,139	44,808
Administration	36,436	1,786	38,222	611	37,611	36,117
	303,080	14,885	317,965	31,415	286,550	315,416

B. Revenue

Figure 23: Revenue Generated by the Program

It is estimated that in 1985-86 the Program will generate $31 million in revenue from eight general sources. These sources and the respective average annual percentage of revenue generated by each are Rentals of Lands and Buildings, 20%; Entrance Fees, 27%; Camping and Trailer Permits, 16%; Visitor Services Rentals, 12% Canal Lockage and Permits, 2%; Other Licences and Permits, 5%; Townsite Utilities, 9%; and Miscellaneous Revenues, 9%.

1985–86 Estimates

Part III

Expenditure Plan

1581

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

External Affairs

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of the reader.

There are four chapters in this document. The first provides an introduction to the Department. The other three present the Program Expenditure Plans for each of the Department's programs.

Chapters 2 to 4 begin with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents.

The first of the three Program Expenditure Plans is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully. The next two Plans consist of two sections, the first of which is a program overview and the second provides further information.

This document is designed to permit ease of access to specific financial information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program. Within Section I of each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Departmental Summary

Roles and Responsibilities

The Department of External Affairs is responsible for activities aimed at the promotion and protection of Canadian interests abroad and the conduct of Canada's external relations. Its functions are:

- to conduct all diplomatic and consular relations on behalf of Canada;
- to conduct all official communications between the Government of Canada and the government of any other country, and between the Government of Canada and international organizations;
- to conduct and manage international negotiations as they relate to Canada;
- to coordinate Canada's international economic relations;
- to foster the expansion of Canada's international trade and commerce;
- to foster the development of international law and its application in Canada's external relations;
- to coordinate the directions given by the government to posts and delegations abroad;
- to manage Canada's posts abroad; and
- to administer the foreign service.

As well, the Department is responsible for evaluating information about economic, political and other developments abroad likely to affect Canada's interests, and to provide advice to the government, often in consultation with other government departments, on the formulation and implementation of policies and programs having an international dimension.

Departmental Organization and Programs

The Secretary of State for External Affairs is responsible for managing the overall mandate of the Department together with the Minister for International Trade who is responsible for international trade and export development and the Minister for External Relations who, among other duties, supports the Secretary of State for External Affairs in international, social, cultural and humanitarian affairs.

The Department consists of three programs. By far the largest and most significant is the Canadian Interests Abroad Program, which is the central focus of Canada's external relations. As well, there is the World Exhibitions Program, which is responsible for Canada's participation in selected international expositions, and the Grains and Oilseeds Program, which works with Agriculture Canada and Transport Canada in the development and marketing of our grains and oilseeds.

Department Spending Plan

The spending plan by program is set out in Figure 1.

Priorities

The key priorities for 1985-86 for the Canadian Interests Abroad Program are in the three following areas:

Fostering Economic Development: There will be a range of efforts aimed at increasing Canadian competitiveness, including: assistance to Canadian exporters in maintaining and increasing export markets; the provision of advice on the international economic environment and its relevance to Canadian domestic interests and policies; and the management of Canada's bilateral and multilateral relationships with a view to their contributing to Canada's economic development.

Peace and Security: It is in Canada's interest to help build an atmosphere of confidence through specific political, security and arms control initatives and continued support for the rule of law in international relations.

Canada's Relationship with the United States: This remains the top geographic priority with a view to managing our interdependence from an economic and security point of view while preserving our national sovereignty.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $736,834,438 in support of the 1985-86 Canadian Interests Abroad Program. The remaining expenditures, estimated at $32,051,400, will be made under existing statutory authority. This includes contributions to employee benefit plans, payments under the Diplomatic Service (Special) Superannuation Act, payments under the Canadian Institute for International Peace and Security Act, payments under the Asia-Pacific Foundation of Canada Act, the Minister's salary and motor car allowance, the Passport Revolving Fund and non-budgetary expenditures for participation in the International Rubber Buffer Stock and purchase of shares in respect of Canada's participation in the first account of the Common Fund.

Parliament has previously authorized a total drawdown of $4,000,000 for the Passport Office Revolving fund. The projected use of this authority as related to these Estimates is as follows:

Operational Support, Human Resource Planning and Administration	922	90,421	8,344	131	98,896	-	98,896	-	98,896	100,812
	4,554	555,194	69,980	156,322	781,496	19,451	762,045	6,841	768,886	726,654

* The Passport Office activity is funded through the use of a Revolving Fund. The Estimates shown on this table refer to the cash requirements for the Fund over the fiscal year. These do not directly reflect the operating profit or loss that the Fund will realize since the latter is calculated on an accrual accounting basis. Therefore, some cash expenditures included in the Estimates do not impact upon the operating balance and certain other items that must be taken into consideration in calculating the profit or loss do not require a direct cash expenditure.

Section I
Program Overview

A. Highlights

During 1985-86, highlights of the Canadian Interests Abroad Program are as follows:

- Canada will continue to have a vital and growing interest in international developments in the coming year. The Canadian Interests Abroad Program will continue to be a major vehicle for the promotion and protection of Canada's interests beyond Canada's borders.

- Given the importance of trade to the Canadian economy, a strong emphasis will be placed on trade development and international marketing activities, as well as seeking to ensure that Canada maintains and increases its access to foreign markets.

- At the same time, the Canadian Interests Abroad Program will pursue activities aimed at bringing about higher levels of Canadian and global security through the promotion of balanced arms control and disarmament measures, through the lessening of tensions between East and West, and through further cooperation with our NATO allies.

- The program will continue to place a strong emphasis on ensuring that Canada maintains strong bilateral relations with those countries which represent our important global partners. Similarly, the Program will devote particular attention to those international institutions which provide the key frameworks for the pursuit of Canadian and global economic, social, and political interests.

- The Canadian Interests Abroad Program will aim at ensuring that the service provided to Canadians living and travelling abroad is effective and efficient.

- During the year, a review of Canada's international relations will be conducted. This review is expected to influence the direction and emphasis of Canadian foreign policy, and thus have an impact on the Canadian Interests Abroad Program.

B. Financial Summary by Activity

Authorized Person-years	4,554			

The increase of $25.3 million in requested resources for 1985-86 Main Estimates over 1984-85 forecast results primarily from the following major items:

$3.1 million resulting from the consolidation of the Medical Services Overseas Branch from Health & Welfare Canada.

$7.3 million for changes in Canada's assessed shares of international organizations budgets.

$5.1 million for the hosting of a Human Rights Meeting in Canada.

$8.3 million inflation factor for rents, utilities and repair and upkeep abroad to reflect changes in prices experienced by posts.

($9.3 million) decrease for various restraint measures including closure of five posts abroad.

$3.6 million for increased delivery of the Aid Program at Posts.

$3.2 million for Immigration processing.

$4.0 million for the program for Export Market Development.

The increase of $16.9 million in the 1984-85 forecast over the 1984-85 main estimates results primarily from the following major items:

$12.9 million for international trade development.

$3.5 million for Arms Control and Disarmament.

$4.9 million for information activities and cultural relations.

$2.0 million for the establishment of the Asia-Pacific Foundation (0.5 M) and the Canadian Institute for International Peace and Security (1.5M).

($3.3 million) decrease resulting from a forecast surplus of $2.2 million in the operation of the passport office rather than a $1.1 million deficit.

($6.8 million) decrease resulting from provisions for the International Rubber Buffer Stock and Common Fund for Commodities not being exercised.

3.7 million for the Visitor Visa program and capital requirements at posts for the aid program.

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

C. Background

1. Introduction

The Canadian Interests Abroad Program is responsible for efforts aimed at the promotion and protection of Canadian interests abroad and the conduct of Canada's external relations.

The major components of the Program are;

- Foreign Policy Priorities and Coordination,
- International Trade Development,
- International Economic Trade and Aid Policy,
- Political, Legal and International Security Affairs,
- Social Affairs and Programs,
- Bilateral Relations and Operations
- Passport, and
- Operational Support, Human Resource Planning and Administration.

2. Legal Mandate

The Department of External Affairs derives its legislative authority from the 1983 Department of External Affairs Act - Statutes of Canada 1980-81-82-83-30-31-32, Chapter 167.

In the economic field, an important legislative instrument is the Export and Import Permits Act, RSC 1970, Chap. E-17. The Act, gives the Government the authority to control and monitor the transborder flow of specified goods.

Other enabling legislation governing Canada's international obligations include the Diplomatic and Consular Privileges and Immunities, SC 1976-77 c. 31, the Privileges and Immunities (International Organizations) Act, RSC 1970 c P-22, the Privileges and Immunities (North Atlantic Treaty Organization) Act, PSC 1970 C. P-23, the United Nations Act, RSC 1970 c. U-3, the Prohibition of International Air Services Act, SC 1980-81-82-83, c. 61 and the Food and Agriculture Organization of the United Nations Act, RSC, 1970 c. F-26.

In the bilateral field, the International Boundary Waters Treaty Act, RSC 1970 c. I-20, the Rainy Lake Watershed Emergency Control, SC 1939, c.33, the Roosevelt-Campobello International Park Commission Act, SC 1964-65, c.19 deal with Canada/USA environmental and transboundary questions.

In addition and due to its nature, the Department is interested in a number of other acts, which are primarily administered by other Government departments. These are listed under additional information in section III.

3. Program Objective

The objective of the Canadian Interests Abroad Program is to carry out Canada's foreign policy and in particular to promote in their international dimensions the national objectives of economic growth, including trade development, peace and security, Canadian sovereignty and national identity, social justice, and to protect the interests of Canadians travelling and living abroad.

4. Program Organization For Delivery

Activity Structure: The Canadian Interests Abroad Program is divided into eight activities which reflect both the "geographical" and the "functional" focus of the Program (and the Department of External Affairs). Figure 3 illustrates the activities of the Program.

Figure 3: Activity Structure

Organizational Structure: The Secretary of State for External Affairs is charged with managing the broad mandate of the Program, together with the Minister for International Trade who is responsible for international trade and export development and the Minister for External Relations who, among other duties, supports the Secretary of State for External Affairs in international social, cultural and humanitarian affairs.

Below the ministerial level, the senior management of the Department consists of an Under-Secretary of State for External Affairs, a deputy minister for international trade, a deputy minister for political affairs and the Ambassador for Multilateral Trade Negotiations and Personal Summit Representative. Below this senior level the structure is as follows:

An Assistant Deputy Minister Policy Coordination supports Deputy Ministers in the areas of policy coordination and management.

Five geographic ADMs are responsible for the management and co-ordination of the full range of Canada's bilateral relations, including trade, with their respecitve regions (Africa and Middle East, Asia and Pacific, USA, Europe, and Latin America and Caribbean). They provide advice to the Deputy Minister (International Trade) on all trade and economic matters within their regions and to the Deputy Minister (Political Affairs) on all other matters regarding Canadian policies and programs in the regions.

Four functional branches of the Department are responsible for overall policy and program development in the areas of trade, international economic and political relations, arms control and disarmament, immigration, consular and social issues.

Two support branches provide the operational support, human resource planning and administrative support required both in Ottawa and at posts abroad.

Figure 4 shows the organizational structure of the Program.

Figure 4: Organizational Structure

D. Planning Perspective

1. Environment

The international environment which faces Canada, and in which Canada must pursue its interests, is characterized by continuing uncertainties but also by opportunities. The central trends running through the international environment facing Canada can be expected to be as follows: a world economy which remains sluggish, but which could improve over the medium term as the recovery in the U.S.A. begins to have a wider global impact; continuing tension between the U.S.A. and the Soviet Union; changes in comparative advantage between states based on the impact of technological change and falling energy prices; increased environmental pressures stemming from population increases and overcrowding; and continuing problems resulting from declining levels of food production in certain areas, particularly in Africa.

Sustained growth will be dependent in part upon the performance of the American economy, a reduction in the level of protectionism and the ability of national economies to adjust domestic industrial structures. Continuing debt problems of developing countries will slow third world recovery and growth and as a result affect the world trading environment. Lower energy prices will benefit some developing countries and have a strongly negative impact on others which depend on energy exports for their revenues.

As a result of combined political instability, civil unrest and poor economic performance, humanitarian issues (refugees, development assistance) are expected to remain of important concern to Canada.

Relations between the U.S.A. and the U.S.S.R. are likely to remain difficult. However, there may be new opportunities for arms control and disarmament agreements in the coming period. Superpower interests and rivalries will continue to be injected into the developing world, with Central America and the Middle East remaining potential zones of tension in this regard.

These economic and political challenges over the remainder of the decade will continue to have a significant and direct impact upon Canadian development. Politically, as a middle power, Canada must seek to influence the principal world actors through bilateral and multilateral means. From an economic and trade perspective, Canada must capitalize on our relations with our principal trading partners to enhance trade flows and also preserve the advantages of the multilateral trading system.

Since some 30% of Canada's GNP is derived from trade, sustained global recovery and long-term growth are vital to Canada's economic

prospects. It will therefore be important for Canada to: encourage the strengthening of international financial and economic institutions; contribute to international understanding of the impacts of structural adjustment; contribute to enhancing the debt servicing capacity of developing countries; increase exports to the emerging Asian markets particularly in the resource, telecommunications, and power transmission sectors; and find our niches in the electronics-based technological revolution. While export performance is one denominator of the success of political and economic diplomacy, economic partnerships go beyond the marketing of Canadian goods abroad, they enjoin financial flows and productive investment in Canada; access to foreign technology and promotion of Canadian research and development; effective patterns of immigration; joint ventures and participation in Canadian resource development; and a variety of other areas for which viable political relationships with other countries are vital.

Effective relations with the U.S.A. remains a priority area for Canadian foreign policy in the coming years. Key issues in the complex bilateral relationship will be centered on environment, trade, extra-territoriality, and defence questions.

2. Initiatives

A broad review of Canadian foreign policy is expected to take place in 1985-86 which will have a clear impact on new initiatives.

3. Program Effectiveness

The objective of the Canadian Interests Abroad Program is "to carry out Canada's foreign policy and in particular to promote in their international dimensions the national objectives of economic growth including trade development, peace and security, Canadian soveignty and national identity, social justice, and to protect the interests of Canadians travelling and living abroad."

The most fundamental role of the Canadian Interests Abroad Program is to assist in the formulation and application of Canada's foreign policy. Domestic and external factors combine to form a continually evolving environment which necessitates adjustments in the emphasis and priority accorded to the components of the Canadian Interests Abroad Program. At the program level judgement must be made as to the effectiveness of Canadian foreign policy as a whole in protecting and advancing Canada's national interests in the international environment across a broad range of political, economic and social issues and interests.

Bearing in mind that, foreign policy is more than the sum of its parts and has to be treated as a coherent whole, program effectiveness will be addressed in terms of major functions.

Broadly speaking the Canadian Interests Abroad Program can be described in terms of five major functions namely, Trade, Political and Economic Relations, Immigration, Public Affairs and Culture, and Consular.

Figure 5 displays the Canadian Interests Abroad Program's utilization of resources by major function. The major functions highlighted in this figure, each contain a share of common services costs such as the cost of administration, telecommunications, personnel etc.

Figure 5: Utilization of Resources by Major Function

Trade: This function accounts for approximately 31% of the overall resources of the Program. These resources are primarily found in three Activities; International Trade Development, which focuses on the market development aspects of trade; International Economic, Trade and Aid Policy which has primary responsibility for the the trade policy aspects; and Bilateral Relations and Operations which delivers the trade and tourism functions abroad. Many factors contribute to the volume of Canadian exports of goods and services.

Political and Economic Relations: This function accounts for approximately 44% of the overall resources of the Program. These resources are primarily found in three Activities; International Economic, Trade and Aid Policy which has primary responsibility for the economic and aid policy aspects; Political, Legal and International Security Affairs which focuses on international security, political institutions and legal aspects of Canada's

international relations; and Bilateral Relations and Operations which delivers the political and economic relations function abroad; costs of delivering the international development assistance program are included in this category.

Immigration: This function accounts for approximately 14% of the overall resources of the Program. These resources are primarily found in two Activities; Social Affairs and Programs which serves as the interface with the Canadian Employment and Immigration Commission on operational and policy matters and co-ordinates activities abroad; and Bilateral Relations and Operations which delivers the Immigration function abroad.

Public Affairs and Culture: This function accounts for approximately 8% of the overall resources of the Program. These resources are primarily found in two Activities; Social Affairs and Programs, which develops the general policy relating to this function and co-ordinates its activities; and Bilateral Relations and Operations which delivers the function abroad.

Consular: The consular function accounts for approximately 3% of the overall resources of the Program. These resources are primarily found in three Activities: Social Affairs and Programs, which develops the general policy framework and co-ordinates activities; Bilateral Relations and Operations which delivers the function abroad; and Passports which provides passports domestically and supports their provision abroad.

Section II
Analysis by Activity

A. Foreign Policy Priorities and Coordination

Objective

To develop and coordinate foreign policy recommendations and initiatives and to allocate resources accordingly.

Resource Summary

The Foreign Policy Priorities and Coordination Activity accounts for 2.8% of the Canadian Interests Abroad Program expenditures and 4.8% of the person-years.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Departmental Policy	2,091	38	2,081	38	10	-
Corporate Management	3,858	34	3,865	34	(7)	-
Planning and Executive Support	6,325	103	5,726	104	599	(1)

	21,967	217	28,600	233	(6,633)	(16)

All resources are used for operating costs with 44% used for personnel and related costs and the remaining 56% for other operating costs such as protection services, supplies and travel.

Description

The responsibilities of the Foreign Policy Priorities and Coordination Activity involve the management and direction of Canada's overall foreign policy and the management of the Department including the management and allocation of its resources.

Departmental responsibility for the management of Canada's foreign policy is centered in the responsibilities and roles of the Under-Secretary of State for External Affairs, the Deputy Minister for International Trade, the Deputy Minister Political Affairs and the Ambassador for Multilateral Trade Negotiations and Personal Summit Representative.

The Deputy Ministers and the Ambassador for Multilateral Trade Negotiations (MTN) are supported in their management of the foreign policy role by the Assistant Deputy Minister, Policy Coordination, who coordinates long-term policy analysis in support of the policy management function. A policy secretariat is responsible for examining new policy directions and monitoring existing policy in the light of priorities across a wide range of political, economic, trade, aid, defence, social and other dimensions.

In addition the government's central protocol service is located in this activity.

Departmental Policy: This sub-activity is responsible for examining new policy directions and monitoring existing policies in light of priorities across a wide range of political, economic, trade, aid, defence, social, and other dimensions.

Corporate Management: This sub-activity ensures that resources flow towards identified priority issues and geographical and functional areas of foreign policy emphasis. Recommendations are formulated for; Ministers, Deputy Ministers, and the Department's executive committee, concerning resource deployments and redeployments in the light of priorities. This sub-activity has responsibility for the evaluation, of program effectiveness and the use of departmental resources and is the locus for corporate planning and implementation.

Planning and Executive Support: This includes the offices and staff of the Secretary of State for External Affairs and the Ministers for International Trade and External Relations. It also includes the Under Secretary, the two Deputy Ministers, the Ambassador MTN, and the Assistant Deputy Minister Policy Coordination. A press office supports this function by acting as the key channel of communications between the department on the one hand and the media and the public on the other hand.

Protocol: This sub-activity provides to foreign missions in Canada the services required by Canada's international obligations and domestic law. This includes the provision of physical protection and the administration of diplomatic privileges and immunities. Protocol provides the logistic and administrative support for official visits to Canada and the Governor General's visits abroad. In addition, Protocol administers the official Government Guest House at 7 Rideau Gate.

Performance Information/Resource Justification

The resources required to carry out these responsibilities in 1985-86 are estimated at approximately $22 million. Person-year requirements are directly related to the amount of effort needed to conduct broad foreign policy decision-making, coordination, analysis, resource allocation and priority identification as well as the day-to-day operations of the offices and staffs of the Ministers, and Deputies. The resource requirements for Protocol are significantly influenced by state visits (such as that of the Pope in 1984).

The expanded role of the Department, as a result of the 1982 major government reorganization of responsibilities in the trade and foreign policy fields, will cause work under this Activity in the Estimates year to continue to focus in the areas of foreign policy coordination and resource management. In regard to foreign policy coordination, the work will concentrate primarily on establishing an enhanced analytical capability for reviewing foreign policy directions and activities and improving capacities to evaluate the impact of the Department's various undertakings aimed at attaining specific foreign policy goals. On the resource management side, the attention will focus on implementing and refining the Department's resource planning systems in a way which ensures a better flow of resources towards foreign policy objectives.

B. International Trade Development

Objective

To increase the level of Canadian exports of goods and services.

Resource Summary

The International Trade Development Activity accounts for 8.1% of the Canadian Interests Abroad Program expenditures, and 3.3% of the person-years. This Activity is one element of the Canadian Interests Abroad Program's overall trade effort. The overall "trade" function accounts for approximately 31% of the Program's total expenditures (see page 2 - 16)

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Export Marketing	55,930	49	53,195	49	2,735	-
Defence Programs	2,762	36	2,745	36	17	-
Industries and Resources	2,807	30	3,007	31	(200)	(1)
Agriculture, Fish and Food	2,059	27	2,044	27	15	-
Planning and Executive Support	443	7	435	7	8	-
	64,001	149	61,426	150	2,575	(1)

Resources are applied on a relatively consistent basis from year to year. Approximately 13% of the resources are used for personnel and related costs, 31% for other operating costs and 56% will be used in this Estimates year for transfer payments in the form of grants and contributions.

Description

The International Trade Development Activity sustains and develops markets for Canadian goods and services. The Trade and Industrial Development component is divided into four bureaux: Defence Programs, Industries and Resources, Export Marketing and Agriculture Fish and Food.

Export Marketing: This sub-activity is the locus in the Department for planning, coordinating and evaluating federal government policies, programs and initiatives related to export development and promotion.

It is responsible for developing a comprehensive export development strategy. As well, it ensures that private sector, and other government's interests and concerns in trade development matters are taken into account.

Defence Programs: This sub-activity is a specialized industrial and trade group which works to develop Canadian defence products for export to allied and other friendly nations. It works to foster international trade and increased exports of Canadian defence and high technology goods and services by assisting Canadian Industry to identify, develop and penetrate export markets.

Industries and Resources: This sub-activity provides the Department with sectoral advice for manufacturing, resource, technological and service industries with respect to export opportunities, major policy issues and international sectoral developments. It deals with major sectoral trade issues which cut across the geographic branches as well as with the international dimension of domestic industrial development policies and initiatives. It is concerned with the proper integration of international sectoral trade policy, export development priorities and domestic development objectives.

Agriculture, Fish and Food: This sub-activity provides the Department with specialized advice on the export potential of business concerns in the agriculture, fish and food sectors. It identifies new markets or marketers in order to retain and expand markets.

Planning and Executive Support: This includes the Assistant Deputy Minister and the operation of that office.

Performance Information/Resource Justification

The identification of export market opportunities, the provision of assistance to Canadian export industries and the promotion of Canadian goods for export each, in their respective ways, provide an important impetus to the expansion of Canadian international trade and commerce. Similarly, tourism promotion in foreign markets will be an important factor in increasing the number of foreign tourists visiting Canada each year thereby contributing to that sector of the Canadian economy.

The resources for this Activity are used in three areas. Personnel and related costs account for approximately $8 million. Other operating costs, which include approximately $15.2 million for the Promotional Projects Program (PPP), will use $19.7 million. Contributions, primarily for the Program for Export Market Development (PEMD) will use $35 million.

Export Marketing: This is the largest user of resources as it is responsible for both the PEMD and PPP programs. These are the major marketing initiatives undertaken by the Department.

Program for Export Marketing Development (PEMD): This program, introduced in 1971, helps develop and increase the export of Canadian goods and services by sharing the financial risks of entering new foreign markets with the business community. The funding is repayable if export efforts are successful. The program's nine sections cover project bidding, market identification, participaton in trade fairs, incoming buyers, formation of export consortia, sustained export market development, food products, fish products, as well as contributions to non-profit organizations involved in the promotion of exports.

The resource requirement of this activity is dependent on the number of applications for assistance received from the business community. These applications are received either directly or through the DRIE regional offices throughout Canada. Recent program activity and resources are set out in Figure 8. It should be noted that not all approved projects result in the expenditure of PEMD funds and that individual project expenditures vary considerably based on the specific needs of the client and the degree to which anticipated expenses are eligible for cost sharing under the program. A review of PEMD is published annually for the applicable fiscal year.

Figure 8: PEMD Activity and Resources

	Estimated 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
No. of applications Received	5800	5700	5644	5535
No. of applications Approved	4250	4150	4105	3998
Value of applications ($ millions)	45	60	42.1	41.1
Expenditures ($ millions)	35.0	31.0	26.9	20.9

Promotional Projects Program: This program provides funds: for organizing national exhibits at trade fairs outside Canada; for trade and economic missions and seminars, abroad and in Canada; and for incoming trade missions and visits to Canada by foreign officials and businessmen.

Resourcing is dependent on: (a) the number of approved fairs and missions projects in approved geographic marketing plans and (b) the cost of achieving each project objective, which varies dependent on the size and category of the event as well as the market and economic conditions in the country hosting the event. Activity by purpose is set out in Figures 9 and 10 and usage by Region is shown in Figure 11.

Figure 9: PPP Activity, Resources and Results

C. International Economic, Trade and Aid Policy

Objective

To promote an international framework of trade rules responsive to Canadian economic objectives and to coordinate Canada's international economic relations.

Resource Summary

The International Economic, Trade and Aid Policy Activity accounts for 4% of the Canadian Interests Abroad Program expenditures and 4% of the person-years.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Economic Policy	5,837	36	5,775	36	62	-
General Trade Policy	3,736	23	3,210	23	526	-
Energy, Transport and Science	8,894	35	8,788	35	106	-
Special Trade Relations	5,540	71	5,490	72	50	(1)
Planning and Executive Support	489	8	470	8	19	-
	24,496	173	23,733	174	763	(1)
Non-Budgetary	6,841		8		6,833	

Resources are applied on a consistent basis from year to year. Approximately 33% of the resources are used for personnel and related costs, 18% for other operating costs and 49% for transfer payments in the form of contributions. Further details on these contributions can be found on page 2.28. As well, this Activity has provided for $6.8 million of non-budgetary expenditures which are displayed in figure 15. Revenue is generated through fees charged for issuance of permits. This revenue is directly credited to the Consolidated Revenue Fund and is not available for use by the Program.

Description

This Activity designs and implements policies aimed at protecting and advancing Canada's economic, trade and aid interests. It is the interface between Canadian industry and the international economic

world, particularly where other governments or multilateral agencies are involved. It ensures that Canadian policy in these areas is consistent with other aspects of Canadian foreign policy. This work is carried out through the following sub-activities:

Economic Policy: This sub-activity is responsible for developing advice on international economic issues which affect Canadian interests. It develops and coordinates Canadian positions for economic summits, Canadian participation in the Organization for Economic Cooperation and Development, on questions related to Canada's relations with developing countries and on the economic dimensions of East-West relations. As well, it provides departmental input into the government policy process relating to international financial and monetary issues, export financing and investment questions.

General Trade Policy: This sub-activity is the focal point within the Government of Canada for the development of trade policy. It is responsible for agricultural and commodity trade policy and negotiation, management of international commodity agreements, and for Canadian participation in the GATT.

Energy, Transport and Science: This sub-activity is responsible for departmental input into development of foreign policy in energy, environment, nuclear, science and technology, communications, space and transportation. It is specifically responsible for the development of Canada's policy to prevent nuclear proliferation. As well, it is the focal point for Canada's relations with such specialized multilateral organizations as the International Energy Agency, the International Atomic Energy Agency, the United Nations Environment Program, the International Civil Aviation Organization, and for a number of functional activities in the UN and the OECD. It is also the focal point for the management of the interface between these international organizations and the concerned domestic Departments.

Special Trade Relations: This sub-activity is responsible for the administration of the Export and Import Permits Act, policy recommendations, and special measures of protection on low cost imports of textiles and clothing and other disruptive imports; negotiation of bilateral restraint arrangements and the associated multilateral agreements, e.g. Multi-Fibre Arrangement; administration of import quotas on footwear and agricultural products; policy development and implementation of export controls of goods and technology for national security and economic development related reasons.

Planning and Executive Support: This includes the Assistant Deputy Minister, the Chief Air Negotiator and the operations of their respective offices.

Performance Information/Resource Justification

Resources for this Activity are applied primarily to cover operating costs and for transfer payments in the form of contributions to cover Canada's obligations in sharing the costs of several international trade, economic, environment and other organizations. Total contributions are approximately $11.9 million. The larger of these contributions are shown below in Figure 14. Approximately $8.2 million, or 66% of the total operating costs, is used to support the personnel and related costs of the 173 person years.

This Activity has responsibility for administration of the Import and Export Permits Act. The volume issued from 1981 to 1984 plus a forecast for 1985, is set out in Figure 13.

Figure 13: Import and Export Permits Issued

The issuance of import/export permits allows the department to control, or in some instances monitor, the flow of those goods covered by the act. The Import Control List includes a wide range of textile and clothing items, footwear and several agricultural products. The Export Control List covers principally military, nuclear and other strategic equipment.

Transfer Payments: Payments for 1985-86 in the form of grants and contributions are $11,947,000. Figure 14 details the major contributions. Further details on these and all other contributions are set out in Figure 33 in Section III of this Plan. Most contribution amounts are the result of formula funding and represent a portion of the shared costs of administering the agency or organization.

Figure 14: Major Contributions by Canada to Trade, Economic and Environmental Organizations ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
International Atomic Energy Agency	4,392	3,901	3,541
General Agreement on Tarriff and Trade	1,323	1,333	1,173
Organization for Economic Co-operation and Development	3,467	3,222	1,656

Other	1,665	1,859	836
	11,947	11,431	8,308

Non-Budgetary Expenditures: As shown in the resource summary on page 1-3, this Activity accounts for program non-budgetary expenditures of $6,841,000. These are detailed in Figure 15.

Figure 15: Non-Budgetary Expenditures ($000)

	Estimated 1985-86	Total to-date	Total Authorization
Participation in the International Natural Rubber Buffer Stock	3,200	5,237	15,000
Purchase of shares in respect of Canada's participation in the first account of the common Fund for Commodities	3,633	-	12,112
Paris Union of the World Intellectual Property Organization	8	16	32
	6,841	5,253	

D. Political, Legal and International Security

Objective

To enhance Canada's sovereignty and security and to contribute to international peace, stability and the rule of law.

Resource Summary

The Political, Legal and International Security Activity accounts for 15.7% of the Canadian Interests Abroad Program expenditures for 1985-86 and 7% of the person-years.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
International Security and Arms Control	15,433	70	14,116	70	1,317	-
Multilateral Affairs	93,181	75	87,340	75	5,841	-
Legal Affairs	5,608	38	6,053	43	(445)	(5)
Intelligence and Security	8,835	124	8,600	123	235	1
Planning and Executive Support	876	3	940	3	(64)	-
	123,933	310	117,049	314	6,884	(4)

The resources for this Activity are relatively consistent from year to year. Approximately 13% of the resources are used for personnel and related costs, 11% for other operating costs, 75% for transfer payments in the form of grants and contributions and 1% for capital. Details of the contributions are set out in Figure 33 in Section III. The most significant are those made to international organizations such as the United Nations, World Health Organization, International Labour Organization, Food and Agriculture Organization and the United Nations Educational, Scientific and Cultural Organization.

Description

This Activity has the prime responsibility for the development, coordination and implementation of Canadian foreign policy directions in the areas of defence relations and international security questions, disarmament, human rights, détente, and other related issues. These policies are implemented both through multilateral institutions and through bilateral geographic relationships. It provides the necessary physical security for Canadian employees and physical properties in establishments abroad, and deals with

intelligence matters relating to foreign policy. It also encompasses the management of the legal aspects of Canada's international relations through fostering the development of international law and ensuring its application in the conduct of Canada's external relations.

This Activity is composed of five sub-activities:

International Security and Arms Control: This sub-activity is responsible for the promotion of stability and security through the NATO alliance and collective security on a global basis and consequently Canada's own security. It is responsible for developing, coordinating and implementing Canadian government policy with regard to arms control and disarmament and for developing and coordinating Canadian positions on related matters in various international fora in order to further collective security and promote resolution of conflict. It includes the Ambassador for Disarmament, and the Ambassador to the Conference on Security and Disarmament in Europe and the operation of their respective offices. As well, it formulates policies related to peacekeeping and the participation of Canadian forces in peacekeeping operations.

Multilateral Affairs: This sub-activity ensures that the wide range of Canadian interests (political and security, economic, social, etc) in the United Nations, its agencies and the Commonwealth are managed effectively. It assumes the lead on institutional and global political questions such as human rights, environmental security and the resolution of conflicts. On economic, social and technical issues it monitors developments and ensures that branches, bureaus and divisions which have direct responsibility are aware of the issues involved. It is the focal point for the management of the activities of the Canadian missions to the UN in New York and Geneva and the UN activities of other missions. It is responsible for monitoring the level of Canadian financial support, for the United Nations and the Commonwealth, and for ensuring that these resources are used effectively and efficiently. As well, it is responsible for the preparation of key ministerial and other speeches on UN and Commonwealth issues.

Legal Affairs: This sub-activity performs both an advisory and an operational function. It is responsible for fostering the development of international law and ensuring its application in the conduct of Canada's external relations. It does so by providing legal advice on Canada's international rights and obligations, protecting Canada's interests through the promotion of the rule of law, and generally, managing the legal aspects of Canada's international relations. It also resolves jurisdictional or other legal disputes through international negotiations or (in accordance with interdepartmental arrangements as appropriate) third-party settlement procedures.

Intelligence and Security: This sub-activity is responsible for the Department's participation in the Canadian intelligence community, and management of the physical and personnel security programmes at headquarters and at posts abroad.

Planning and Executive Support: This includes the Assistant Deputy Minister and the operations of that office.

Performance Information/Resource Justification

The policies pursued by Canada in the international security field are directly aimed at enhancing Canada's sovereignty and international security and stability. In their international dimensions, our relationship with the UN, the Commonwealth and other multilateral organizations deal with, not only the security of Canadians but with the broader objectives of economic development and social justice in the world. Approximately 88% of the resources required are used to cover personnel costs and the transfer payments necessary for Canada's participation in various international organizations.

Personnel Costs: This activity will use approximately $15.7 million to support the 310 person-years required to carry out the various functions in 1985-86. The nature of the work in this activity is fairly consistent from year to year and the required person-year resources are estimated on proven historical demand. Extraordinary demands sometimes arise but are normally dealt with through reallocation of existing resources, or in some cases, temporary resources. Concrete tasks such as; attendance at the numerous meetings of multilateral organizations, their subsidiary bodies and working groups; preparations for these meetings including briefings, positions papers, and speeches; coordination with other government departments, consultation with other countries, and provision of secretariat services to delegations, are all functions normally carried out by this activity.

Transfer Payments: A major requirement for resources in this activity is to provide the contributions Canada makes to world organizations. Contributions in 1985-86 are estimated at $88,146,000. The major contributions are set out in Figure 17. A detailed list of all grants and contributions can be found in Figure 33 in Section III of this Plan. Most contributions represent assessed or expected shares of the budgets of the organizations in which Canada participates. Although many of these contributions could be considered discretionary, there is little latitude in funding if Canada is to remain as a participating partner.

Figure 17: Major Contributions to Organizations ($000)

Organization	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Food and Agriculture	10,071	10,737	9,344
International Labour Organization	5,558	5,074	4,846
Pan American Health	4,200	4,047	3,539
UNESCO	8,092	8,011	6,524
UN Interim Force in Lebanon	7,563	6,655	5,471
UN	29,331	25,367	24,927
World Health	10,150	8,773	8,875
Other	13,181	12,709	9,793
	88,146	81,373	73,319

Other operating expenditures of $13.3 million will be required in 1985-86. This amount has remained relatively constant over the past three years.

E. Social Affairs and Programs

Objective

To increase the awareness of Canada abroad to coordinate the provinces' involvement in international relations and to give direction to the cultural, immigration and consular programs.

Resource Summary

The Social Affairs and Programs Activity accounts for 4.1% of the Canadian Interests Abroad Program expenditures and 4% of the person-years.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Culture, Public Affairs and Information	23,931	95	29,991	101	(6,060)	(6)
Immigration and Social Affairs	1,549	28	1,653	28	(104)	-
Consular Affairs	1,348	23	1,352	23	(4)	-
Intergovernmental Affairs	5,458	18	5,445	18	13	-
Planning and Executive Support	139	2	138	2	1	-
	32,425	166	38,579	172	(6,154)	(6)

Approximately 24% of the resources in this Estimates year will be used for personnel and related costs, 42% for other operating costs and 34% for transfer payments in the form of grants and contributions.

Description

This Activity formulates, develops and manages policies and programs related to humanitarian and social development concerns, immigration, consular assistance, culture and public affairs. It includes the management of the international and foreign policy aspects of issues such as population and the status of women and minorities. As well it deals with coordination with the provinces on the international dimensions of all issues under their domestic jurisdiction. It also formulates and implements policies related to the promotion of the French language and the management of Canada's relations with Francophone institutions. The Activity has five sub-activities.

Culture, Public Affairs and Information : This sub-activity is responsible for developing policies and programs designed to increase awareness of Canada, its identity, culture and capabilities for the purposes of: supporting global foreign policy and trade objectives; fostering markets for the Canadian cultural industry; and providing exposure for Canadian artists in key countries. It is responsible for the management of Canada's permanent delegation to UNESCO and for answering domestic requests for information on Canada's role in international affairs. As well, it provides advice and support to the geographic branches which are responsible for implementation of cultural and public affairs programs in their regions.

Immigration, and Social Affairs : This sub-activity is responsible for the following:

Under the terms of its March 31, 1981 agreement with the Canada Employment and Immigration Commission (CEIC), the Department of External Affairs has responsibility for the implementation of CEIC policy abroad. It provides the interface with CEIC and ensures that they are kept abreast of international pressures and obligations which may have an influence on its policies, particularly as they relate to human resources and refugees. As well, it is responsible for the coordination of reporting on social issues on behalf of the CEIC and other concerned governments departments. It coordinates, with the applicable federal and provincial authorities, positions to be taken by Canada in international fora on such issues as status of women, social development, etc.

Consular Affairs: This sub-activity is responsible for the formulation of consular policy and guidelines and their implementation. It provides posts with instructions and guidance on consular matters in general and on specific problems. In Canada, the Bureau liaises with the relatives and/or friends of distressed Canadians and appropriate authorities, as required, and generally coordinates the assistance provided to these Canadians abroad.

Intergovernmental Affairs: This sub-activity is responsible for consultation and coordination with the provinces on the full range of issues which come under provincial jurisdiction. This includes most of the social issues as well as a number of concerns in economic and other fields. It is also responsible for the coordination of provincial participation in international meetings and the formulation, coordination and implementation of policies relating to the promotion of the French language through cooperation with French speaking nations and Francophone institutions.

Planning and Executive Support: This sub-activity includes the office of the Assistant Deputy Minister and the operations of that office.

Performance Information/Resource Justification

Culture, Public Affairs and Information : The promotion abroad of the bilingual and multicultural character of Canadian society is an integral part of promoting Canada's distinct national identity. The assertion of Canada's identity is fundamental to Canada's profile abroad and to the achievement of its global foreign policy and trade objectives. Assessment of the level of resources required is therefore based on an assessment of the level of emphasis to be placed on these objectives at any given time. Regular reviews of the programs, their objectives, and the amount of influence enjoyed by Canada in the countries concerned are the means used for making decisions on resources.

Transfer Payments: One of the major means of achieving the understanding of the character of Canada abroad as well as creating export opportunities for the Canadian cultural industry is the provision of financial assistance to related associations in the form of grants. These are detailed in Figure 19. They are primarily aimed at such areas as promotion of Canadian studies abroad and the provision of assistance to Canadian artists to perform abroad. The balance of the resources are required for other normal operating costs.

Figure 19: Grants for Culture and Public Affairs

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Atlantic Association of Young Political Leaders	**1,000**	1,000	1,000
Society of Jacques Cartier	**-**	50,000	-
Grant to Maison des étudiants canadiens à Paris	**-**	2,500,000	100,000

Grants in aid of Cultural Relations	**2,861,624**	4,150,324	2,856,289
International Baccalaureat Office	**5,000**	5,000	5,000
Orchestre mondial de jeunesses musicales	**-**	50,000	50,000
	6,575,331	11,453,881	6,623,120

Immigration and Social Affairs: Approximately 28 person-years will be required in 1985-86 in this Activity to coordinate delivery of the mandate of the Canada Employment and Immigration Commission at posts abroad. This includes the responsibility for developing immigration policy advice and guidance and for monitoring the delivery of these programs on a global basis to ensure consistency of approach. Also included is advice on resource allocation and deployment in various posts abroad.

As well as the normal operating costs to support these person-years and related expenditures, there is a $10,000 contribution to the Intergovernmental Committee for Migration.

In 1985-86, emphasis will be placed on entrepreneurial immigration which helps create and protect jobs in Canada. As well, a pilot project will be implemented to gain operational experience aimed at developing a computerized system for processing immigration applications throughout the world.

Consular Affairs: This element coordinates the consular function being delivered throughout the world. Some 23 person-years are required to provide instructions and guidance to posts on consular matters in general and on specific problems which may arise. In Canada, it liaises with appropriate authorities relatives and/or friends of these distressed Canadians abroad as required.

In 1985-86 specific initiatives will involve the development of a better system for formatting consular statistics to facilitate resource allocation. Also, priority will be given to negotiation of consular agreements with the countries of Eastern Europe.

Intergovernmental Affairs: Consultation with the provinces on international issues relating to their areas of domestic jurisdiction will require 18 person-years. As well, approximately $4.6 million is required for transfer payments in the form of contributions as set out in Figure 20.

F. Bilateral Relations and Operations

Objective

To advance the full range of Canada's foreign policy interests through the development of Canada's bilateral and regional relationships and through the delivery of specific programs abroad.

Resource Summary

The Bilateral Relations Activity accounts for 50% of the Canadian Interests Abroad Program expenditures and 50% of the person-years.

Figure 21: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y

	397,088	2,266	380,457	2,215	16,631	51

In the geographic subactivities (excluding Physical Resources) in 1984-85 approximately $29 million was spent at headquarters and $288 million at Posts abroad. The corresponding PY division was 374 at HQ and 1702 abroad. Overall abroad and at Headquarters (including the Physical Resources sub-activity) 49.9% of expenditures were on personnel costs, 32.7% on other operating, 16.5% on capital and .9% on grants and contributions. Figure 22 displays planned expenditures, excluding Physical Resources, by post function and geographic area. This display involves allocation of post resources on the basis of person years deployed abroad on a program basis.

Description

This Activity is responsible for; the management of Canada's bilateral relations with specific countries and regions; management of the complex of issues and interests involved, in particular in the political, economic, trade promotion and trade relations, industrial cooperation and investment fields; delivery of the official

development assistance, immigration, culture, public affairs and tourism programs abroad; provision of consular services at posts abroad; analysis and assessment of developments in foreign countries in terms of their impact on Canadian interests; formulation of policy recommendations as they touch on Canada's interests in specific countries and groups of countries; and management and supply of the physical plant and material required by posts abroad.

This Activity is carried out by five geographic Branches and the Physical Resources Bureau. Each of the five geographic branches consists of two components, headquarters in Ottawa and the operational components abroad. The headquarters component deals with the management of Canada's bilateral relationships and the implementation of policies and programs in the geographical regions and includes the offices of the five "geographic" Assistant Deputy Ministers. Together, these five branches form the overall framework for the management of Canada's bilateral relations and the pursuit of its interests in the regions. It is within this global framework that decisions involving shifts in policy and resources are made.

The work carried out at the bilateral posts is structured into 10 functions. This includes the eight described below as well as components for administration and the provision of support for the operations abroad of several other government departments and agencies (RCMP, DND, Revenue Canada and others).

The **Policy, Planning and Coordination** function involves the planning and management of activities, the allocation and deployment of resources to reflect priorities, coordination of programs, and making recommendations on high level visits in the countries of accreditation and overseeing these visits.

The **Political and Economic Relations** function covers the management of the political and economic dimensions of Canada's relationships with foreign countries. It covers activities aimed at developing and promoting Canada's bilateral and multilateral relations, strenghtening its influence abroad and protecting and expanding its access to international markets.

The **Trade and Industrial Development** function includes activities aimed at expanding Canada's share of export markets. It covers all sectors of trade and includes such work as the provision of assistance to Canadian exporters, organization of and provision of support to fairs, missions and major projects, the identification of market and business opportunities and sourcing, the identification and reporting of appropriate sources of foreign investment and responding to foreign investment enquiries. Also included are corporate liaison and market surveys undertaken on behalf of the private sector.

The **Tourism** function is devoted to the promotion abroad of Canada as a destination for tourists. Tasks include advertising and marketing, public relations activities, and coordination and presentation of displays, publications, consumer promotion activities, and educational tours.

The **Official Development Assistance** function deals with the implementation of Canada's aid program abroad. It is aimed at supporting the economic, technical, educational, and social development of developing countries, as well as providing humanitarian assistance and pursuing Canada's political and economic interests. Responsibilities also include analysis of and reporting on the development plans of the host countries, identification of potential aid projects and providing input into the formulation of aid policy relating to specific countries and regions. It involves as well, the negotiation of aid protocols and agreements.

The **Culture, Public Affairs and Information** function is aimed at creating an informed and sympathetic understanding of Canada and Canadian capabilities among leaders and other influential audiences in foreign countries. Tasks include coordination and assistance in cultural manifestations and events, art exhibitions, and film festivals. Also included are establishing and maintaining relations with the media, universities, other academic institutions and other public opinion shapers. In conjunction with the "Trade and Industrial Development" function, it undertakes the commercial promotion of Canadian artistic products abroad.

The **Immigration and Social Affairs** function involves the reunification of families, the fulfillment of Canada's international obligations towards refugees, the selection of skilled manpower and entrepreneurs, and the facilitation of the entry of bona fide visitors into Canada. Responsibilities also include reporting on immigration and demographic policy, labour market and human resource development, race relations and refugee policy in the host countries.

The **Consular** function is aimed at protecting the interests of Canadians living and travelling abroad. It involves, within the limits of international practice, provision of assistance to those whose welfare is in jeopardy, and the provision of services relating to passports, citizenship, and legal and notorial requirements.

Physical Resources Bureau: This sub-activity involves, the design, construction, leasing, purchase, maintenance, furnishing and disposal of chanceries, residences, and staff quarters for all Canadian Goverment departments and agencies represented abroad. Details of major capital projects are set out in figure 32 on page 2-54.

Performance Information/Resource Justification

The deployment of resources by geographic region is a function of the relationships and partnerships which Canada enjoys with the countries of those regions, the mix of interest which Canada pursues in those regions, and the operational environment in those regions. Set out below is a list of current general priorities on a regional basis.

United States of America

- generating influence on issues of prime importance to Canada, and greater understanding and awareness of Canada in the USA;
- actively promoting the export of Canadian goods and services to Canada's most important single market;
- addressing and seeking to reconcile bilateral trade issues;
- seeking solutions to the most urgent transboundary and environmental issues; and
- attention to Canada/U.S.A. energy issues.

Europe

- promoting and protecting the range of Canadian political, security, social, economic and cultural interests in Europe;
- stimulating Canadian access to commercial opportunities, seeking investment funds, transfer of technology, and protecting Canada's terms of market access to the world's largest market;
- pursuing Canada's political, security, humanitarian and commercial interests with the countries of Eastern Europe and the USSR; and
- Seeking to develop a constructive dialogue with the USSR bilaterally, and contributing to a broader East-West dialogue, notably on political, security and humanitarian issues.

Asia and the Pacific

- developing means of expanding Canada's political, trade, and economic relations with the countries of the Pacific Rim.
- expanding the relationship with China particularly in economic and trade areas.

- increasing attention to Canada-Japan relationship; and

- contining development of economic and political links with the Association of South East Asia Nations (ASEAN).

Africa and the Middle East

- rationalization of assistance provided to counter deteriorating economic and social conditions resulting from drought, famine and refugee situations; and

- increasing Canada's access to and share of the markets represented by the Middle East oil producing states.

Latin America and Caribbean

- preserving Canada's market share and maintaining a strong commercial presence in Latin America and the Caribbean;

- attention to humanitarian issues arising from political instability; and

- strengthening political and economic relations with the Commonwealth Caribbean.

G. Passports

Objective

To provide Canadian citizens and other eligible residents of Canada with the timely issuance of travel documents.

Resource Summary

The Passport Activity operates on a revolving fund basis and its operations are intended to be self-funding. Revenue is raised from fees charged for passports issued and other passport services. These fees are set out in Figure 24 on page 45. For 1985-86, it is estimated that revenue will exceed expenditures by $761,000. A statement of net modified cash requirements is set out in Figure 23.

Figure 23: Statement of Net Modified Cash Requirements ($000)

Net Modified Cash Requirements	(761)	(2,272)	(2,475)
Person-Years	351	353	339

Description

This activity deals with the issuance of travel documents most of which are passports. Passports are issued under the Royal Perogative as exercised by the Secretary of State for External Affairs and in turn delegated to the Director-General of the Passport Bureau. The governing Order in Council is Canadian Passport Order PC 1981-1472 of June 4, 1981.

This Activity is responsible for policy formulation, the issuance of regular, special and diplomatic passports, and program support for posts abroad. It also has authority for delivering certificates of identity to legally landed residents of Canada who are unable to obtain travel documents from their country of origin.

Performance Information/Resource Justification

As indicated above under Resource Summary, the operations of the Passport Activity are intended to be fully self-funding. This is accomplished through use of a revolving fund and the fund has authority to carry over surplus revenue to offset future shortfalls. All revenue is derived from fees charged for passport services. The current fee schedule for issuance is set out in Figure 24.

Figure 24: Fee Schedule and Volumes

Category of Travel Document	Current Fee	Number of Issues Estimated 1985-86	Forecast 1984-85	Actual 1983-84
Passport				
Regular	21	886,500	886,500	811,366
Regular with 48 pages	23	6,600	6,600	6,777
Offical	57	8,100	8,100	7,267
Other				
Non Citizen	21	4,000	4,000	3,666
Emergency	6	800	800	875
		906,000	906,000	829,951

The passport issuance process is decentralized to 16 offices throughout Canada. Outside of Canada, the issuance of passports is handled by the Consular function within the Social Affairs and Programs Activity. The revenue raised from the fees for this service abroad is credited to the Passport Revolving Fund and the fund in turn is charged a fee for services provided by the posts abroad. The Passport Bureau develops and formulates all policy and operational guidelines and provides all necessary guidance and instruction in this

area as well as material support to the Consular function. As well, all administrative functions for the Passport bureau, including finance and personnel are carried out within the Bureau.

Applicants can apply for passports by mail or in person to Ottawa or in person at any of the 16 regional offices. Passports are also issued at posts abroad. Application forms are made available at post offices, travel agencies, major airline carriers and at any passport office.

The demand for passport services is highly seasonal, peaking in February to May. This requires the use of temporary help during this peak period. Figure 25 illustrates resource utilization patterns for 1984-85.

Figure 25: Resource Requirements by Quarter

	First Quarter Person-Years (Apr-Jun)	2 Quarter person-years (Jul-Sept)	3 Quarter person-years (Oct-Dec)	4 Quarter person-years (Jan-Mar)	TOTAL
1984-85	98	78	76	101	353

Passports are normally issued in three days when applications are submitted in person at regional offices. Applications mailed to Ottawa normally take seven days plus mailing time to process. There may be exceptions to these standards during peak periods. A major consideration in the management of this activity involves establishing a suitable balance between an acceptable level of service in terms of processing time, adequate security to maintain the integrity of the Canadian passports and costs, which are directly reflected in the fee structure.

Three years of depressed demand for passports ended in January 1983 with a sharp increase. High levels of passport demand have continued since then with a 19% increase in volume in 1983-84 and a forecasted 11% increase in 1984-85. About 20% of applications are submitted by mail and the balance are presented in person at the regional offices in Canada and/or the public counters in Ottawa and Hull. Posts abroad handle about 55,000 applications annually, representing 7% of the total volume. Figure 26 illustrates 1983-84 level of service in relation to time standards for the issuance of passports on receipt of application.

Services provided by this activity are highly visible and the risks associated with the issuance of passports containing errors or inaccurate information clearly point to the importance of high quality performance. Control procedures and the audit of passport returns assure the level of service and a good international reputation for Canadian passports.

Figure 26: Service Levels for Passports Issued in 1983-84

	Number Issued	Level of Service (Passport issued Within)	(% at Level of Service)
Through the mail	188,491	7 days	96%
		14 days	99%
Over the counter	575,646	3 days	95%
		5 days	99%

H. Operational Support, Human Resource Planning and Administration

Objective

To provide central support services and human resource planning to allow the Department to carry out its mandate.

Resource Summary

The Administration and Operational Support Activity accounts for 12.5% of the Canadian Interest Abroad Program expenditures and 20.2% of the person-years.

Figure 27: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Personnel	44,523	279	43,846	279	677	-
Finance	10,458	143	10,187	143	271	-
Communications and General Services	37,883	448	36,552	448	1,331	-
Management Audit and Review	2,197	25	2,125	25	72	-
Planning and Executive Support	3,835	27	3,266	24	569	3
	98,896	922	95,976	919	2,920	3

Of the 1985-86 financial resource requirements, 35% is required for personnel and related costs, capital expenditures account for approximately 8% and other operating costs account for 56%.

Description

This Activity involves the provision of support for the Department both at headquarters in Ottawa and at posts abroad. This includes financial, telecommunications, records management, EDP and management consulting services and the development and implementation of personnel policies and management programs.

Performance Information/Resource Justification

Operational support, human resource planning and administrative services are essential to the Department's operations. Resource requirements are examined against the major categories of services provided (travel, removal, telecommunications, support staff, etc.) as well as against the environment and particular circumstances of the individual posts abroad. In 1985-86 resources will be used as follows:

Personnel: Approximately 279 person-years and $44.5 million are used for the administration of personnel services. These involve the recruitment, staffing, assignment, appraisal and promotion of about 4,500 Canada-based staff. Also involved are the classification and organization of the Department's 8,000 positions, and the establishment of compensation packages for the 3,700 locally engaged staff abroad. Figure 28 provides a breakdown of resources:

Figure 28: Allocation of Resources for Personnel ($000)

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Personnel Administration	11,229	118	11,184	118	45	-
Personnel Operations	27,721	97	27,537	97	184	-
Personnel Planning and Development	5,573	64	5,125	64	448	-
	44,523	279	43,846	279	677	-

Finance: One hundred and forty-three person years and $10.5 million will be used for the financial management and administration of the Department, including the provision of management consulting services in respect of headquarters and all operations abroad. Some areas particular to the Department's environment are: number of currencies and fluctuating exchange rates; devaluations and exchange controls; differing inflation rates and dealings with (in some countries) less developed banking systems than our own.

Communications and General Services: The Communications and General Services sub-activity accounts for 448 person-years and $37.9 million. One of the major responsibilities carried out [illegible] provision of a global communications network, (secure and unclassified telecommunications, courier and mail services) for all departments and agencies dealing with international issues, which uses approximately $22 million. Also included are the management of records and record systems for the Department as a whole, library services and headquarters word-processing facilities. Management of headquarters' accommodation and facilities are also part of this sub-activity.

Management, Audit and Review: Twenty-five person-years and $2.2 million are used to assess the effectiveness of operations and programs at headquarters and abroad through systematic audits and inspections.

Planning and Executive Support: This includes funds for redeployment of positions and program adjustments, the units dealing with access to Information and Privacy, and the Affirmative Action Program. It also contains the offices of the ADM, Personnel, and the ADM, Administration.

(Operational Support, Human Resource Planning and Administration)

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 32 provides details of major capital projects which are those having expenditures of $250,000 or more. As shown in Figure 32, capital funds will be used for a number of projects. The major user is the Bilateral Relations and Operations Activity which acquires and maintains the asset inventory for holdings at posts throughout the world.

Figure 32: Details of Major Capital Projects ($000)

	Previous Estimated Total Cost	Current Estimated Total Cost	Forecast expend. Mar.31 1985	Estimates 1985-86	Future Years Requirements

5. Revenue Analysis

Figures 34 provides a listing of revenue generated by the Program. This revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

Figure 34: Revenue by Class ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Receipts Credited to Revenue			
Return on Investments (Posting Loans and U.N. Bond Issue)	710	640	576
Privileges, Licenses & Permits (Rental Revenue from Canada-Engaged Staff Abroad for accommodation in Government owned, Government-leased or Private-leased premises)	12,320	11,200	10,483
Proceeds from Sales (Revenue from Sales of Items not transferred to Crown Assets Disposal Corporation e.g. Department publications)	24	22	12
Service and Service fees (Consular Service Fees, including Visas)	197	164	137
Refund of Previous Years' expenditures (Refunds to distressed Canadian Citizens' accounts set up in previous years; collection on previous years' billings; Canada's share of surplus derived from prior years' contributions to international organizations:			
a) Repayments from the program from Export Market Development	1,521	1,383	1,317
b) Other	7,401	6,727	6,407
Miscellaneous (Superannuation contributions by the Diplomatic Service; estimated cost of service provided to the Passport Office; Sundry Items)	* 5,300	2,000	2,226
Adjustments prior years - Payable at Year End	716	623	593
TOTAL	28,189	22,759	21,751

* Includes revenue of $3,100,000 for assessed shares from countries participating in the CSCE Experts Meeting on Human Rights.

B. Cost Analysis

Net Program Cost

The Program's 1985-86 Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items, as well as revenue, must also be included when considering the actual costs to operate the Program.

Figure 35: Net Cost of Program by Activity for the Year 1985-86 ($000)

	Expendi-tures	Other Costs	Total Cost	Deduct Revenue	Net Cost	1984-85 Forecast
Foreign Policy Priorities and Coordination	21,967	791	22,758	9	22,749	30,212
International Trade Development	64,001	543	64,544	2,036	62,508	59,949
International Economic, Trade and Aid Policy	31,337	630	31,967	1,774	30,193	24,012
Political Legal and International Security Affairs	123,933	1,130	125,063	4,005	121,058	115,593
Social affairs and Programs	32,425	605	33,030	291	32,739	39,526
Bilateral Relation and Operations	397,088	34,945	432,033	16,454	415,579	396,978
Passports	(761)	-	(761)	-	(761)	(2,272)
Operational Support, Human Resource Planning and Administration	98,896	3,359	102,255	3,620	98,635	98,960
	768,886	42,003	810,889	28,189	782,700	762,958

The adjustments made to the estimated expenditures to arrive at a total cost include: accommodation provided without charge by this Department and by Public Works, and other services provided without charge by other departments. Included are all revenues generated by the Program.

C. Additional Information

1. Acts and Regulations Administered

As well as the acts and regulations identified under the Legal Mandate on page 2-7, the following are administered in whole or in part by the Program:

- o Meat Import Act, 1980-81-82-83, c. 82;
- o Cultural Property Export and Import Act, SC 1974-75-76, c. 50;
- o Fort Frances - International Falls Bridge Authority Act, SC 1970-71-72, c. 51;
- o State Immunity Act, SC 1980-81-82-83, c. 95;
- o Territorial Sea and Fishing Zone Act, RSC 1970, c T-7;
- o Export Development Act, RSC 1970, c. E-18;
- o International Development Research Centre Act, RSC 1970, 1st supplement, c. 21.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $ 10,988,000 in support of the 1985-86 Grains and Oilseeds Program. The remaining expenditures,estimated at $ 307,000 will be made under existing statutory authority as contributions to employee benefits plans.

Section I
Program Overview

A. Highlights

Highlights for the 1985-86 Estimates year are as follows:

- Rising production costs, depressed markets and government intervention in competing countries will exert pressure for increased Canadian government support for the grains and oilseed sector particularly in respect to credit guarantee facilities.

- Growing international instability in grain markets will necessitate increased efforts to moderate pressures on current trading relationships and trade policy mechanisms with a view to constraining undesirable marketing and protectionist polices.

- Responsibility for the Western Grain Stabilization Act (1984-85 Estimates $150 million) and the Prairie Grain Advance Payment Act (1984-85 Estimates $12 million) now resides in Agriculture Canada.

B. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Marketing	11,295	14,106	(2,811)
Authorized person-years	58		

The major change in financial requirements between 1984-85 Main Estimates and the 1985-86 Main Estimates is the transfer as stated in the last highlight above. Because of this transfer, data has been removed from 1984-85 figures to facilitate comparisons.

The decrease of $2.8 million is primarily due to decreased contributions in 1985-86 ($2.0 million decrease results from a decreased requirement for payments to facilitate sales of grains and grain products on credit to developing countries; contributions to the Goverment of Brazil for grain silos and handling equipment forecast in 1984-85 as $1.7 million may not be required in 1985-86, although obligations in the amount of $450,000 are outstanding).

C. Background

1. Introduction

The Grains and Oilseeds Program is one component of the Government's presence in the Canadian grains and oilseeds industry. Other Government components include programs supported by Agriculture Canada and Transport Canada. Grains and oilseeds represents approximately one-half of the total returns to farmers in the prairie region from the marketing of agricultural products.

This program is concerned with the study and development of more effective and economic methods for moving, storing, processing and selling Canadian grains and oilseeds, and the development and administration of programs for preparing production guidelines. As well it works on the establishment of initial payments for Canadian Wheat Board grains; provision of marketing and industrial development assistance and participation in the work of international and domestic organizations concerning grains and oilseeds.

2. Legal Mandate

The legal mandate of the Grains and Oilseeds Program derives from the External Affairs Act and the Canadian Wheat Board Act.

Statutes ascribed to Agriculture Canada and Transport Canada provide legislation influencing the Grains and Oilseeds Program.

3. Program Objective

The objective of the Grains and Oilseeds Program is "to achieve sustained market growth and to maintain an orderly marketing system for grains and oilseeds".

4. Program Organization for Delivery

The Program is located in Ottawa as a component of the Department of External Affairs.

The program is comprised of 58 persons engaged in the areas of trade development and export promotion, market and policy analysis, and policy and program development as they relate to cereal grains and oilseeds. Included in the program are the personnel complement of the Office of the Minister of State for the Canadian Wheat Board comprised of 14 person-years, the Special Advisory Group on Grains (Grains Group) comprised of 6 person-years and the department's Grain Marketing Bureau comprised of 38 person-years. The Director General of the Bureau is also the marketing advisor and departmental representative on the Special Advisory Group on Grains (Grains Group) which reports to the Minister of State for the Canadian Wheat Board.

5. Environment

The Canadian grains and oilseeds industry is large, complex and diverse. It is largely export oriented, and subject to a wide range of external, uncontrollable, and often unpredictable developments. The world grain industry is characterized by rapid changes from periods of short supply to periods of over-supply with volatile effects on prices and market returns. The Canadian grain industry, as the second largest supplier to the world market, is heavily influenced by such developments. There is a significant government involvement in both the domestic and international grains and oilseeds sector.

The sector, both nationally and globally, has demonstrated potential for significant growth throughout the 1980s, albeit at a slower rate than in the seventies, due to a slackening in export demand because of depressed global economic conditions and a supply surplus. This situation has resulted in an extremely competitive, and at times even predatory international grain trading environment which is exacerbated by depressed world market prices. Trade is further constrained by production and export incentives and non-tariff barriers in markets where Canada would otherwise have a competitive advantage. This very competitive market situation, coupled with world-wide economic problems and increasing grain production costs and little likelihood of immediate, substantial recovery, suggest that the international trading environment for grains and oilseeds could continue to be difficult through much of this decade.

D. Performance Information/Resource Justification

Grants and Contributions: Four expenditures constitute the major portion of the program's grants and contributions. These are the grain credit sales contribution ($1,800,000); the contribution to the Protein, Oil and Starch (POS) Pilot Plant Corporation ($2 million); the payments to flour millers in Western Canada on grain processed into flour for export ($1,296,000); and the contribution to the Canadian International Grains Institute ($1,508,000).

The Grain Credit Sales program provides guarantees for the financing or insurance of grain sales to developing countries on terms of up to three years. There is also provision for sales on terms in excess of three years, at fixed interest rates. The $1.8 million Estimates item "Payment to Facilitate Sales of Grain and Grain Products on Credit to Developing Countries" provides for payments to subsidize the difference between fixed interest rates negotiated with the buyer and the current market rates applicable to outstanding debts on grain sales made on concessional credit terms. There are currently payments under this item on credit sales, under agreements concluded in 1972 with two countries, on repayment terms of 10 years at concessional

rates of interest. There have been no new commitments on subsidized terms since 1972 and all payments cease with the maturity of the outstanding credit before the end of the 1987/88 fiscal year. These two countries are now major commercial markets for Canadian grains.

The POS Pilot Plant Corporation is a joint federal government/industry venture which was established in 1977 with the objective of developing new and improved processes and products (primarily grains and oilseeds based) that have export and domestic market potential. The facility translates laboratory results from food and feed processing research and development into commercially feasible market and industrial applications. This is done on a non-profit fee for service basis for industry and provincial government, member and non-member clients. The federal government provided the initial capital funding of $4.5 million and has provided an equal amount since 1976-77 towards annual operating costs. The $2 million contribution is to help off-set the projected operating deficit for 1984-85.

The Canadian International Grains Institute is a non-profit corporation offering instructional programs in grain marketing, handling, transportation and technology. The Institute's programs are designed to provide market development support for Canada's grain and oilseed industry. Working closely with the industry, the Institute provides potential buyers with a better understanding of the Canadian and world grain industry and thereby contributes to the maintenance and enlargement of markets for Canadian grains and oilseeds and their products. Since the Institute's incorporation in 1972, representatives (many with grain purchasing responsibilitites) from more than 60 different countries have been invited to attend the Institute's courses. This budget item covers the Federal Government's contribution to the operating and capital costs of the Institute. These costs are shared by the Department (60%) and the Canadian Wheat Board (40%).

The payments to Western Canadian flour millers are made to equalize the rail freight stop-off charge (for milling in transit) with that paid by eastern Canadian millers on grain processed into flour for export. The stop-off rate for eastern Canadian mills has been frozen at 3 cents per cwt under Section 272 of the Railway Act since 1966 while the western stop-off rate, which is not frozen, has been consistently increasing. Since 1973, the government has offset this freight rate inequality through a payment to western mills equal to the difference between the two stop-off charges with a view to keeping the western flour mills competitive with eastern mills with respect to their flour exports.

For additional detail on all grants and contributions refer to Section II, Supplementary Information.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

The Grains and Oilseeds Program expenditures by object are presented in Figure 2.

Figure 2: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel:			
Salaries and wages	2,193	2,165	1,580
Contributions to employee benefit plans	307	282	308
	2,500	2,447	1,888
Goods and Services:			
Transportation and communications	600	422	541
Information	169	21	43
Professional and special services	475	476	402
Rentals	60	37	38
Purchased repair and upkeep	8	8	4
Utilities materials and supplies	42	66	28
All other expenditures	-	-	-
	1,354	1,030	1,056
Total operating	3,854	3,477	2,944
Transfer payments			
Grants	400	400	400
Contributions	7,041	10,229	17,673
Total Expenditures	11,295	14,106	21,017

2. Personnel Expenditures

The Program's personnel costs of $ 2.5 million account for about 65% of total operating expenditures and about 27% of total program expenditures. This includes the statutory contributions to employee benefit plans. Figure 3 shows the person-years and average annual salary by category.

Figure 3: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range		1985-86 Average Salary Provision
	85-86	84-85	83-84*			
Management			2			
Executive	2	2	-	50,350	96,300	71,803
Senior Management	3	3	-			66,439

Clerical & Regulatory	11	11	-	12,932	31,743	23,957
Secretarial, Stenographic and Typing	14	14	-	12,636	31,946	21,533

* Program was under Industry Trade and Commerce in 1983-84 Main Estimates.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 4 presents a summary of all transfer payments in the form of grants and contribution expenditures. These account for 59% of total Program expenditures.

Figure 4: Details of Transfer Payments

	Estimates 1985-86	Forecasts 1984-85	Actual 1983-84
Grants			
Canola Council of Canada to promote improvement in the manufacture of Canadian rapeseed products	400,000	400,000	400,000
Total grants	400,000	400,000	400,000
Contributions			
Fees for membership in the International Wheat Council	347,000	211,000	218,907
Canada Grains Council	90,000	90,000	89,220
Payments in accordance with terms and conditions approved by the Governor in Council to facilitate sales of grain and grain products on credit to developing countries	1,800,000	3,800,000	4,146,249
Canadian International Grains Institute	1,508,000	1,449,000	1,329,219
Payments to millers in Western Canada to equalize freight "stop-off" charges between Eastern and Western Canada on grain processed into flour for export	1,296,000	925,000	626,684

	Estimates 1985-86	Forecasts 1984-85	Actual 1983-84
Contribution to the Government of Brazil for technical and construction costs incurred relative to the acquisition and construction of grain silos and handling facilities at grain importing and distribution points in Brazil	-	1,674,000	2,349,543
Contribution to the POS Plant Corporation	2,000,000	2,000,000	800,000
Grains and Oilseeds Markets Incentive Program	-	80,000	-
Reimbursement to the Canadian Wheat Board for the 1981-82 OATS Pool Account deficit	-	-	2,370,924
Reimbursement to the Canadian Wheat Board for the 1981-82 BARLEY Pool Account deficit	-	-	5,742,523
Total contributions	7,041,000	10,229,000	17,673,269
Total transfer payments	7,441,000	10,629,000	18,073,269

B. Cost Analysis

Net Program Cost

The Program's 1985-86 Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items, as well as revenue, must also be included when considering the actual costs to operate the Program.

Figure 5: Net Cost of Program by Activity for the Year 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Net Cost	1984-85 Forecast
Grains and Oilseeds Program	11,295	50	11,345	11,345	14,162

The adjustments made to the estimated expenditures to arrive at a total cost include: accommodation provided without charge by Public Works, and other services provided without charge by other departments.

	16	3,548		2,114	5,662	3,460

Section I
Program Overview

A. Highlights

The major highlights for 1985-86 are:

- Participation in the 1985 International Exposition at Tsukuba, Japan;
- Liaison with authorities responsible for Expo 86 in Vancouver; and
- Class grants of $2,100,000 to provide subsidies to developing countries to facilitate participation as exhibitors at Expo 86.

B. Financial Summary

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change
World Exhibitions	5,662	10,345	(4,683)
Authorized person-years	**16**	20	(4)

The decrease in 1985-86 requirements compared with the 1984-85 forecast of $4.7 million primarily reflects the completion, of Canadian participation in the 1984 Louisiana World exposition and the majority of the expenses for Expo 85 in Japan.

Figure 2: Percentage of 1985-86 Resources by Object of Expenditure ($000)

	$	%
Salaries and wages	698	12.3
Contributions to employee benefit plans	88	1.6

Utilities, materials and supplies	130	2.3
All other expenditures	11	0.2
Transfer Payments	2114	37.3
	5662	100.

C. Background

1. Introduction

Due to the special nature of its role, the World Exhibitions Program is funded under a separate vote. The Program is managed by the International Expositions Division. The Director of the Division represents Canada at the International Bureau of Expositions (BIE) and is generally responsible for the management of Canada's relationship with the BIE. The 46-member BIE is responsible for the registration of international expositions and the administration of the 1928 Vienna Convention governing international expositions.

The Division is also responsible for coordination and management of Canada's participation in BIE registered international expositions in which participation has been approved by Cabinet, as for example Expo 84 in New Orleans. It is responsible as well for international liaison and promotion of expositions held in Canada, such as Expo 86 Vancouver, and for providing advice to domestic departments, agencies and provincial authorities responsible for the coordination and management of such expositions.

2. Legal Mandate

The World Exhibitions Program derives its mandate from the Department of External Affairs Act, Ch. 167. It is responsible for the management of Canada's relationship with the BIE, the coordination of Canadian participation in international expositions registered with the BIE and promotion abroad of BIE approved expositions held in Canada.

3. Program Objective

The objective of the Program is "to present an image of Canada that portrays the country's industrial, cultural and social development". This is done through participation in world exhibitions approved by the International Bureau of Expositions.

4. Program Organization for Delivery

As a result of its size and homogeneity of operation, the program consists of only one activity. Responsibility for the Program rests with the Director, International Expositions Division, who reports to the Director General, Cultural and Public Information Bureau, who in turn reports to the Assistant Deputy Minister, Social Affairs and Programs.

5. Environment

Demands for Canadian participation in international expositions, originating both from within Canada and from outside, have increased in recent years. The number of international expositions, actual and proposed, has grown and the interval between them has shrunk proportionally. Expositions are registered for the 1980s and into the 1990s (Expo 85, Tsukuba; Expo 86, Vancouver; Expo 88, Brisbane; Expo 92, Chicago/Seville).

D. Performance Information/Resource Justification

The operation of the World Exhibitions Program provides management and coordination of Canadian participation in selected international expositions and promotes abroad international expositions held in Canada. Resourcing is largely policy driven and based on ministerial and cabinet decisions. Membership in the International Bureau of Expositions does, to a certain extent, entail participation in expositions registered with that organization. Furthermore, participation is often undertaken on a reciprocal basis and participation in an exposition held in a foreign country is very often a precondition for attracting that country to participate in an exposition being held in Canada. Although participation itself is sometimes non-discretionary, there always exists the measure of freedom to determine the level and nature of such participation. The determining factor will be the appeal of the individual exposition's theme to Canada in terms of particular Canadian areas of expertise (e.g., Expo 85, Tsukuba on the theme of science and technology).

Resources for 1985-86 are estimated as set out in Figure 3. The program will operate in 1985-86 with 16 person-years. These person-years are required to cover such functions as liasing with and attending meetings of the BIE in Paris, liaising with authorities responsible for Expo 86, Vancouver (four P-Ys), coordinating participation in the 1985 international exposition in Tsukuba, Japan (five P-Ys). Other functions include the preparation of recommendations on Canadian participation in future expositions and providing guidance on the planning and organization of expositions to be held in Canada.

Figure 3: Application of Resources ($000)

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Future World Expositions	509	7	418	7	91	
Expo 84, New Orleans	0		2,559	4	(2,559)	(4)
Expo 85, Tsukuba	2,577	5	6,900	5	(4,323)	
Expo 86, Vancouver	2,576	4	468	4	2,108	
	5,662	16	10,345	20	(4,683)	(4)

The above resources include transfer payments in the form of a contribution of $14,000 to the International Bureau of Expositions which represents Canada's membership fee and grants totaling $2,100,000 which will be awarded to third world exhibitors in order to subsidize their participation. It is anticipated there will be approximately 10 such grants, which will be awarded by the Commissioner General of Expo 86.

The Program does not lend itself to performance measurement in a quantitative sense. It is anticipated that participation in expositions whose theme is relevant to Canadian interests and capabilities will result in economic gains. Similarly, it must be assumed that there are economic returns in the hosting of an international exposition. However, such benefits are difficult to quantify.

The level of international participation in expositions held in Canada provides some measure of Program performance as does the satisfaction of the participants, the authorities responsible and the organizers.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

The World Exhibitions Program expenditures by object are presented in Figure 4.

Figure 4: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	698	735	383
Contributions to employee benefit plans	88	77	50
Other operating costs			
Transportation and communications	265	521	69
Professional and special services	2,106	7,297	2,870
Rentals	221	1,410	266
Purchased repair and upkeep	29	16	
Utilities materials and supplies	130	265	89
Other	11	10	2
Total operating	3,548	10,331	3,729
Transfer Payments	2,114	14	7
Total expenditures	5,662	10,345	3,736

2. Personnel Expenditures

The Program's personnel costs of $786 thousand account for about 22% of total operating expenditures and about 14% of total program expenditures. This includes the statutory contributions to employee benefit plans. Figure 5 shows the person-years and average annual salary by category.

Figure 5: Average Annual Salary by Category

	Authorized Person-Years			Current Salary Range		1985-86 Average Salary Provision
	1985-86	1984-85	1983-84			
Executive	1	1	1	50,350	96,300	85,073
Administrative and Foreign Service

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Federal Court of Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $8,532,000 in 1985-1986 in support of the Federal Court of Canada Program. Contributions to employee benefit plans of $770,000 will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86, the Administration plans to focus upon the following matters, in addition to maintaining court services:

- The design and approval of a new Federal Court of Canada Building. The impact on the Federal Court of Canada during 1985-86 will be the requirement for detailed information concerning workload forecasts, predicted workflow patterns and organizational structure and size. This will require several persons to investigate and compile the data required by consultants hired by the Department of Public Works; (see page 12).

- As a result of additional judicial appointments, the capacity to process cases has been increased, and with the anticipated increase in income tax, immigration and judicial review cases an additional five person-years will be applied to the increased workload; (see page 16).

- To provide a translation unit to give the judges immediate in-house translation facilities to enable the court to comply fully with the spirit and letter of section 5 of the Official Languages Act in the issuing simultaneously of judgments and reasons for judgment in both official languages.

- To provide the members of the Press and the general public with an information service on all matters before the Court. One person-year will be required to perform this service.

2. Financial Summary

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Administration of the Federal Court of Canada	9,302	8,855	447
Authorized person-years	184	171	13

The 1984-85 Forecast is $1 million or 13% higher than the 1984-85 Main Estimates (Extracts from Part II of the Estimates page 4). This increase funded by Supplementary Estimates is due primarily to delays in obtaining accommodation planned for 1983-84 and the need for additional accommodation as a result of the changes to the Judges Act.

Explanation of Changes: The increase of $447,000 or 5% in the 1985-86 financial requirements over the 1984-85 Forecast is due primarily to the following offsetting factors.

	($000)
• additional salary costs for 13 person-years and the continuing costs for 4 person-years included in the 1984-85 Supplementary Estimates	480
• additional costs for Contributions to Employee Benefit Plans	125
• additional salary and other operating costs	566
• reduction in capital requirements	(724)

Salaries, travel and superannuation payments to judges of the Federal Court of Canada are paid through the Office of the Commissioner for Federal Judicial Affairs.

B. Recent Performance

1. Highlights

The significant highlights of 1983-84 and 1984-85 were:

- The impact of new legislation upon the workload of the Court was reviewed and assessed, resources for this project were included in the overall budget.

- The printing of the consolidated and annotated revision of the Federal Court Rules was delayed (see page 13). A report was submitted to the members of the Judges' Rules Committee for instructions before proceeding to a final print. This project will be completed within the $25,000 budget as planned.

- New offices were opened in Winnipeg in 1983-84 and Calgary in 1984-85 at a cost of $126,620 and two person-years for each office, negotiations are taking place to open a similar office in Quebec City.

- The amendment to the Judges' Act in 1983-84 increased the number of judges by six, and with the replacement of two judges who elected supernumerary status, it was necessary to provide suitable accommodations. This and the overcrowded conditions in the Supreme Court Building led to a decision to move the Trial Division to other premises. Set-up costs for furniture, fixtures and equipment were provided at a cost of $627,000 in 1984-85.

- In order to ensure a uniform level of service and expertise throughout Canada an in-house training program was introduced to upgrade qualifications and provide officers with the specialized knowledge required to assist the judges and litigants.

- The security systems for the Court were improved in accordance with recommendations made by the R.C.M.P. (see page 13).

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983 - 84		
	Actual	Main Estimates	Change
Administration of the Federal Court of Canada	6,775	6,358	417
Authorized Person-Years	150	146	4

The 1983-84 actual figure includes the Main Estimates $6,358,000; Supplementary Estimate $708,000 and four person-years; and an authorized increase in Employee Benefit plans of $62,000; less funds lapsed.

The Supplementary Estimate covered the cost of establishing offices in Calgary, Quebec City and Winnipeg, however, due to delays in finding suitable accommodations the opening of the Calgary and Quebec City offices was delayed and funds provided for this purpose lapsed.

C. Background

1. Introduction

The program provides administrative services to the Federal Court of Canada which has jurisdiction to hear a wide variety of matters including admiralty, income tax, intellectual property, claims against and by the Crown and appeals under the Citizenship Act. It also has jurisdiction to hear appeals from the Trial Division, and to review decisions of federal boards, commissions and tribunals. The Court is a superior court of record with civil and criminal jurisdiction.

2. Legal Mandate

The Federal Court of Canada is established under the authority of the Constitution Act, 1867, by the Federal Court Act, RSC 1970 Chapter 10 (2nd Supp.).

Section 201 of the National Defence Act, which establishes the Court Martial Appeal Court of Canada, also provides that the officers of the Registry of the Federal Court of Canada are ex-officio officers of the Registry of the Court Martial Appeal Court of Canada. By order in council, all Federal Court Judges and other judges that are appointed from provincial superior courts are judges of the Court Martial Appeal Court of Canada. In addition, the judges of the Federal Court of Canada act as Umpires under the Unemployment Insurance Act, and as assessors under the Animal Disease and Protection Act and the Pesticide Residue Compensation Act.

3. Program Objective

The objective of the Federal Court of Canada is to provide a court of law, equity and admiralty for the better administration of the laws of Canada.

4. Program Description

The Administration of the Federal Court of Canada provides administrative assistance to the judges and to litigants who appear before the Court. Assistance includes providing Court facilities, scheduling hearing dates, maintaining trust accounts for monies paid into Court by litigants pursuant to an Order of the Court, Rules of the Court or Statutes, as well as other services such as providing advice on the procedures to be followed by litigants when bringing a matter to the Court.

5. Program Organization for Delivery

Activity Structure: The Program has one activity which provides for the Administration of the Federal Court of Canada.

Organization Structure: The Federal Court of Canada is organized pursuant to the Federal Court Act and Rules. The Court is composed of a Chief Justice, and Associate Chief Justice and 22 judges, all of whom are appointed by the Governor in Council. It is organized into the Trial and Appeal Divisions. The Administrator of the Federal Court is accountable to the Chief Justice for the operation of the Registry and for all administrative matters necessary for the operation of the Court. The Administrator is the Deputy Head of the staff of the Federal Court of Canada. He is assisted by federally appointed district administrators in Halifax, Montreal, Quebec City, Toronto, Winnipeg, Calgary and Vancouver, and by provincial and territorial employees in other locations. In addition to the complement of full-time judges and judges who elect supernumerary status, an added capacity to cope with the purely judicial work of the Court is provided by the authority to invite retired federally appointed Judges to act as Deputy Judges of the Court. This authority extends also to federally appointed Judges who may act as Deputy Judge with the consent of the appropriate Chief Justice or Attorney General. The Program supports the Federal Court through the work of the following units:

Registry: There is one Registry for all of Canada. The staff of the Registry provides administrative assistance to the Judges and to litigants to prepare for Court hearings. There are 162 person years associated with this function.

Registry Offices: All of the above services are provided at the principal office in Ottawa and at district offices, which are maintained in 16 locations across Canada. Eight of the district offices are operated by federally appointed staff and eight by provincial and territorial employees, under contractual agreements. In areas where the Registry does not have an office, access to the Court is available by means of written or telephone communications with any of the offices of the Registry.

Administrative Services: Administrative, personnel and financial services are provided to all offices of the Registry from a central location in the principal office of the Registry.

Figure 3 shows the distribution of 1985-86 resources by organization

D. Planning Perspective

1. Environment

Several key factors affect the nature of the program.

Legislation: The introduction of new legislation has a direct impact upon the number and complexity of cases heard by the Federal Court of Canada. Recent legislative changes such as the Canadian Security Intelligence Service Act and the proposed amendments are expected to cause an increase in work load.

There have been, for example, an increase in the number of cases under the Canadian Charter of Rights and Freedoms and the Privacy Act.

Court Decisions: Decisions rendered on appeals heard by the Supreme Court of Canada or the Federal Court of Canada of a jurisdictional nature can affect the Program. One example is a recent decision by the Supreme Court which deemed that proceedings for repayment of loans under the Prairie Grain Advance Payment Act were within the jurisdiction of the Federal Court and resulted in additional Court hearings.

Social and Economic Conditions: Various social and economic factors have a bearing on the Program. For example, recent economic conditions have caused an increase in income tax and immigration litigation. The projected increase in Immigration cases will continue to have a significant impact on the Registry in 1985.

There has been an increase in the number of litigants including inmates of federal institutions, representing themselves. This places an additional workload on the Registry, as it is necessary to give detailed explanations of procedures throughout the course of proceedings. There are also additional requirements for security measures in cases involving inmates.

Growing awareness of statutory language rights including those in the new Charter of Rights and Freedoms, has led to an increased demand for simultaneous translation at Court hearings, which must be provided by the Program.

2. Initiatives

As a result of the overcrowding in the Supreme Court of Canada Building and the Federal Court of Canada Annex, additional accommodation was provided in two other locations and a third satellite will be required before 1985. The Federal Court requires a new building in one centralized location, and a Department of Public Works submission is

presently being prepared for Treasury Board wherein approval is sought for monies to complete detailed design and contract documents, specifications and definitive cost estimates for the new building. The impact on the Federal Court of Canada will be the requirement for detailed information concerning workload forecasts, predicted workflow patterns and organizational structure and size.

3. Update on Previously Reported Initiatives

In recent years the administration of the Court has initiated the following projects:

- The court has introduced additional security measures to protect material received in the Court, and its premises. The start up of these measures was accomplished during 1983-84 within the $60,000 budget as planned.

- Additional accommodations in Ottawa, Winnipeg and Calgary have been provided and negotiations are taking place to open a similar office in Quebec City. (see page 8)

- The publication of the consolidation of the Federal Court Rules has been delayed and will be completed in 1984-85 (see page 8).

- Automated retrieval and indexing systems with terminals in the Regional offices are being installed and will be completed in 1984-85 at a cost of $45,000.

- The first phase of a three-year project to bind 1,100 boxes of law reports is underway and it is expected that this project can be completed within the $50,000 annual budget as planned.

4. Program Effectiveness

The effectiveness of the Program in meeting its objectives can be gauged through its ability to provide the parties with the opportunity to have their cases heard at a location convenient to them within a reasonable period of time, and to provide litigants with the assistance and advice necessary to bring their cases to the Court.

Access: Facilities that enable litigants to have their cases heard at a location convenient to them are arranged at local offices at 16 locations across Canada and at other appropriate offices. The use of local offices is shown in Figure 4 which depicts the number of proceedings instituted at the principal office in Ottawa and at local offices from 1979 to 1984. Over the five years for which actual figures are shown, 18,326 or 42% of a total number of 43,909 proceedings were instituted in local offices.

Figure 4: Proceedings Initiated by Location 1979 - 1984

	1979	1980	1981	1982	1983	Forecast 1984
Principal Office	4,580	4,437	4,675	5,599	6,292	5,004
District Offices	2,555	2,789	2,868	5,547	4,567	3,996
Total Proceedings	7,135	7,226	7,543	11,146	10,859	9,000
Percentage at District Offices	36	39	38	50	42	44

Expeditious Processing: The time that elapses between the date that a proceeding is instituted and the day when the matter is disposed of is subject to several factors that are not within the Registry's control. For example, litigants require time to prepare their arguments or briefs, and this is particularly so for complex matters. The Court Registry, for its part, assists in arranging facilities for motions, trials and appeals at various locations and in a manner consistent with the number of days available in Court. In some instances, the matter may be so complex as to involve numerous interlocutory proceedings between the institution of the case and its final disposition. One area in which the Court has the responsibility to ensure that cases are dealt without delay is the review under section 28 of decisions of boards and tribunals, this includes immigration, labour, public service cases, etc.

Service to the Public: The Registry, through its principal office in Ottawa and district offices, provides advice and assistance about the practice and procedures of the Court to litigants. Every effort is made to eliminate any unnecessary formal steps that might create delay or expense. Parties are encouraged to deal with the Registry by letter and by telephone, where possible, to reduce or eliminate non-contentious appearances of lawyers or parties before the Court. As well, documents may be filed with the Court by sending them to the Registry by mail. While it must be stressed that it is the litigants' option to appear in Court, many judgments and orders pronounced by the Court are dealt with

without the personal appearance of counsel. Court hearings are open to the public; in camera sittings are held only in exceptional cases. Figure 5 below summarizes the number of Court appearances for recent years.

Figure 5: Number of Court Appearances

	1980	1981	1982	1983	Forecast 1984
Appearance with Counsel	3,127	3,645	4,223	4,775	6,587
Appearance without Counsel	1,819	1,561	1,463	1,961	2,060
Total Appearances	4,946	5,206	5,686	6,736	8,647
Percentage without Counsel	37	30	26	29	24

5. Performance Information/Resource Justification

Court Registry: The Court Registry performs an intermediary function between judges and litigants and in doing so, provides assistance in order to render effective the substantive law and to facilitate the advancement of cases. This encompasses responding to litigants' enquiries and informing them of practice and procedures necessary to have their cases heard by the court. It also includes providing facilities and staff when court is in session.

It is the goal of the Court Registry to continue to administer the services required by the Court, litigants, and the general public while coping with an increasing workload and new demands on resources. In so doing, it has been necessary to work with an increasing inventory of proceedings that have yet to be heard by the Court.

In 1985-86, 162 of a total of 184 persons employed by the Program will be directly engaged in the provision of Registry services at either the principal office in Ottawa or in district offices. Figure 6 shows the number of matters dealt with in both the Appeal and Trial Divisions of the Court, and the number of Registry operational staff for the years from 1979 to 1984 inclusive.

Figure 6: Matters Dealt With by the Registry and Staff Utilized, 1979 - 1984 Inclusive.

	1979	1980	1981	1982	1983	Forecast 1984
Matters instituted	7,135	7,226	7,543	11,146	10,859	9,000
Matters heard	4,980	4,946	5,206	5,686	6,736	8,647
Total matters	12,115	12,172	12,749	16,832	17,595	17,647
Registry staff	128	123	130	130	134	153

Another factor which has a bearing upon the workload of the Registry staff is the number of days that the Court is in session. Figure 7 shows that the number of days has increased from 699 in 1976 to 1,057 in 1983 (an increase of 51.2%). This represents the number of days the Court has held sittings across Canada.

Figure 7: Number of Days in Court - 1976-1983 inclusive.

Because of the gains in efficiency, the Registry has coped with the 51.2% increase while limiting the increase in Registry staff to 5% in 1983; however, due to the increase in judicial appointments from 16 to 22 in 1982-83, the opening of four new offices and the workload increases generated by these changes the Registry staff is being increased by 14% in 1984-85 and 1% in 1985-86.

Reporting Services: The increased workload of the Judges and the increase in Court sittings and the complexity of the issues involved in the trials, has led to an increased demand for Court reporters and transcript. As the workload of a judge often requires that he leave his consideration of a particular trial for a longer than customary period of time after hearing the evidence and argument; he must rely on the transcript of the verbatim court reporter to recall the essence of the testimony or argument. In addition, Rule 505 of the General Rules and Orders of the Federal Court of Canada requires that a transcript of evidence taken at a Reference form part of the Referees Report. $100,000 was provided for these services.

Administrative Services: In addition to the usual personnel, finance and administrative services, the administration performs a unique function maintaining trust accounts on behalf of litigants before the Court. Those accounts record the amounts paid into the Federal Court of Canada pursuant to an Order of the Court, Rules of the Court or Statutes, to be held in trust pending payment of such monies in accordance with a judgment of the Court. The value of the Trust Accounts is shown in Figure 8 below.

Figure 8: Trust Accounts 1980 to 1983

	1980 - 81	1981 - 82	1982 - 83	1983 - 84
Value, March 31	$6,989,512	$10,165,860	$11,179,901	$3,902,323
Number	421	464	532	576

As the workload in the Registry increases, the number of trust accounts increases accordingly. It is expected that this trend will continue.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Operating expenditures for the Administration of the Federal Court of Canada are presented in Figure 9.

Figure 9: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	5,609	4,810	3,947
Contributions to employee benefit plans	770	645	609
	6,379	5,455	4,556
Goods and Services			
Transportation and communication	710	695	604
Professional and special services	1,118	800	639
Rentals	232	140	108
Purchased repairs and upkeep	111	114	56
Materials, utilities and supplies	564	737	585
All other expenditures	25	27	12
	2,760	2,513	2,004
Total operating	9,139	7,968	6,560
Capital	163	887	215
Total expenditures	9,302	8,855	6,775

2. Personnel Expenditures

The Administration of the Federal Court of Canada is a labour intensive organization with personnel costs (including contributions to employee benefit plans) representing over 70% of total operating costs.

Figure 10: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management, Scientific and Professional	4	3	2	19,782 - 96,300	44,431
Administrative and Foreign service	73	65	59	12,766 - 63,870	37,597
Technical Social Science	7	3	-	12,635 - 57,764	35,310
Administrative Support Clerical	51	48	45	12,932 - 31,743	21,372
Secretarial	37	35	30	12,636 - 31,946	25,562
Operational General Services	12	13	10	13,253 - 39,988	21,036

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 11: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Retrieval and indexing systems		45	
Word processors		62	
Furniture and fixtures	113	710	159
Vehicle	12		
Other equipment	38	70	56
Total Capital	163	887	215

B. Cost Analysis

Figure 12: Net Cost of Program for the Year 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Costs	Deduct Revenue	1985-86 Net Cost	1984-85 Net Cost
Administration of Federal Court of Canada Program	9,302	4,216	13,518	195	13,323	11,786

The adjustments made to the voted budgetary expenditures to arrive at the net cost include services provided without charge by Public Works ($4,079,000), Supply and Services ($13,000) and Treasury Board ($124,000). Revenues deducted from Total Costs represent filing fees from plaintiffs for matters instituted in the Court and the sale of Reasons for Judgement.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Fisheries
and Oceans

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

The Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses which the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

In 1984-85, the Department implemented a new activity structure. This year's Expenditure Plan introduces information on effectiveness and efficiency for several activities. The Department will continue to develop and refine this information for future Expenditure Plans.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $594,739,000 in support of the 1985-86 Department of Fisheries and Oceans. The remaining expenditures, estimated at $34,385,000, will be made under existing statutory authority.

Financial Requirements by Authority

Vote	Vote (thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Fisheries and Oceans

Section 1
Program Overview

A. Highlights

The highlights of the Fisheries and Oceans Program for 1985-86 are as follows:

- to continue, under Economic Regional Development Agreements (ERDA), comprehensive fisheries development plans for Prince Edward Island and New Brunswick, totalling $10.1 million (see page 42);

- to review the "enterprise allocations" system in consultation with Atlantic provinces and user groups;

- to develop a new Pacific fishery management regime, in consultation with the industry, which will include measures to restore depressed salmon and herring stocks, and to improve habitat management and conservation (see page 27);

- to protect and increase markets and develop cooperation on conservation through consultations and negotiations involving nine international fisheries commissions, trade and aid organizations and foreign governments (see page 47);

- to continue projects under the Energy Research and Development program concerned with such aspects of offshore energy development as forecasting oceanic conditions and providing accelerated hydrographic charting in Arctic and offshore areas (see pages 52 and 55);

- to reduce departmental expenditures by $30 million through a variety of measures such as the termination of generic fish promotion in the U.S. market (see page 45), and the privatization of the Fishing Vessel Insurance Plan (FVIP) (see page 43); and

- to increase revenues by $8 million through cost recovery measures such as increased berthage and foreign license fees, and the introduction of fees for the use of research vessels, ocean data products and inspection services (see page 66).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Atlantic Fishery Management	170,075	172,466	(2,391)	19
Pacific and Yukon Fishery Management	106,289	111,135	(4,846)	24
Northwest Territories and Inland Fishery Management	22,115	24,104	(1,989)	29
Services to the Fishing Industry*	161,583	290,700	(129,117)	35
Marketing and International Fisheries	11,667	18,118	(6,451)	45
Ocean Science and Surveys	125,857	135,198	(9,341)	49
Corporate Administration	35,038	41,153	(6,115)	57
	632,624	792,874	(160,250)	
Less: Revenue credited to the Vote*	3,500	3,500	---	35
Total	629,124	789,374	(160,250)	
Person-years	6,353	6,592	(239)	

*Revenue credited to the Vote applies to the Services to the Fishing Industry Activity. The net expenditure of this activity is $158.1 million in 1985-86 and $283.3 million in 1984-85. For information on Revenue credited to the Consolidated Revenue Fund consult Figure 45 on page 66.

Explanation of Change: Financial requirements for 1985-86 are 20% or $160 million lower than forecast 1984-85 expenditures. This net decrease is due primarily to termination or reduction of special funding programs such as Special Recovery Capital Projects ($108 million), Fisheries Resource Employment Development for Youth ($14 million), and Fisheries Prices Support Act price stabilization activities ($12 million).

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $99 million or 14% higher than the 1984-85 Main Estimates of $690 million (Extracts from Part II of the Estimates, page 4). Major increase items include Fisheries Prices Support Act price stabilization ($12 million), Fisheries Resource Employment Development for Youth activities ($14 million), other employment-related initiaitives ($10 million) and Special Recovery Capital Projects ($29 million).

C. Background

1. Introduction

The Department of Fisheries and Oceans consists of one program which is responsible for:

- fishery management and research within Canadian waters and areas beyond these waters;
- services to the fishing industry, including the development and administration of fishing and recreational harbours and the inspection of fishing vessels, plants and products, and fisheries economic development;
- marketing support and international fisheries relations including international marketing;
- oceanographic research; and
- hydrographic surveying and charting.

Under the Constitution Act, the federal government has exclusive legislative jurisdiction over Canada's fisheries in coastal and inland waters and for hydrographic surveying and charting of marine and inland navigable waters.

The provinces have been given specific administrative responsibilities, which vary from province to province:

- in the Northwest and Yukon Territories and the eastern provinces - Nova Scotia, New Brunswick, Newfoundland and Prince Edward Island - the Department is responsible for the management of both freshwater and marine (saltwater) fisheries;
- in Quebec, the federal government manages the marine fisheries, while the province is responsible for the freshwater fisheries;
- in the inland provinces - Ontario, Manitoba, Saskatchewan and Alberta - the management of the fisheries is a provincial responsibility; and
- in British Columbia, the marine and anadromous species (fish that migrate from freshwater to sea) are a federal responsibility while the province manages the freshwater fisheries.

In all areas of Canada, the Department is responsible for the inspection of fish and fish products imported to or exported from Canada as well as shipments from one province to another.

2. Legal Mandate

The main legislative base of the Department is the Government Organization Act (1979) and the schedule of statutes attached thereto, including the Fisheries Act, the Fisheries Development Act, the Fish Inspection Act, the Fishing and Recreational Harbours Act, the Coastal Fisheries Protection Act, the Fisheries and Oceans Research Advisory Council Act, the Territorial Sea and Fishing Zones Act, the Canada Shipping Act regarding charts and publications, regulations, and several international treaties and conventions. Under the Government Organization Act (1979), the duties, powers and functions of the Minister of Fisheries and Oceans include responsibilities for hydrography and marine sciences, and for the coordination of the policies and programs of the Government of Canada respecting oceans.

3. Program Objective

The objective of the Fisheries and Oceans Program is "to undertake, promote and co-ordinate policies and programs: for the conservation and management of the aquatic renewable resources of Canada and their habitats; for the sustained economic utilization of these resources, taking into account the dependence of Canadian communities on them; and for the conduct of surveys and research in support of Canada's economic and scientific interests in the oceans, including the safe use of Canada's navigable waters and environmentally acceptable utilization of other marine resources".

To accomplish this objective, the Department has adopted the following sub-objectives:

- to conserve, enhance and manage the fishery resource base and to promote the orderly development of commercial, native and recreational fisheries;
- to provide services and an infrastructure to achieve greater economic returns and social benefits from the fishery resource, the fish processing industry and the exploitation of non-renewable marine resources;
- to promote domestic and international sales for Canadian fish and fish products and to negotiate Canadian fisheries' positions in the international arena to ensure the protection and maintenance of Canadian interests; and

- to promote and facilitate the safe use of Canada's navigable waters, to provide information and advice contributing to the environmentally acceptable utilization of marine resources, and to ensure the effective coordination of the policies and programs of the Government of Canada with respect to ocean science and technology.

4. Program Organization for Delivery

Activity Structure: The Fisheries and Oceans Program is divided into seven activities which reflect the responsibilities within the Program and how it is managed to meet its stated objectives. Each activity is divided into work-activities to further refine the objectives and operation of the Program. Figure 2 illustrates the activities of the Program and their respective work-activities.

Figure 2: Activity Structure

Organization Structure: The Department of Fisheries and Oceans is composed of six main organizational entities, each headed by an Assistant Deputy Minister. These are: Atlantic Fishery, Pacific and Freshwater Fisheries, Marketing and International Fisheries, Ocean Science and Surveys, Policy and Program Planning, and Finance and Administration.

National headquarters, located in Ottawa, is responsible for policy development, national planning and the monitoring of program and policy implementation. Fishery management, research and infrastructure programs are carried out in seven regions: Newfoundland, with regional headquarters in St. John's; Scotia-Fundy, with headquarters in Halifax; Gulf, with headquarters in Moncton; Quebec, with headquarters in Quebec City; Ontario, with headquarters in Burlington; Western, with headquarters in Winnipeg; and Pacific, with headquarters in Vancouver.

Field programs in Ocean Science and Surveys (OSS) are conducted from four regions whose headquarters are located at: the Bedford Institute of Oceanography in Dartmouth, Nova Scotia (OSS Atlantic); the Institute of Ocean Sciences at Sidney, British Columbia (OSS Pacific); the Bayfield Laboratory for Marine Science and Surveys, Burlington, Ontario (OSS Central); and the Champlain Centre for Marine Science and Surveys, Quebec City, Quebec (OSS Quebec).

The relationship between the departmental organization and the previously described activity structure, and the associated 1985-86 resources, is shown in Figure 3.

D. Planning Perspective

1. Environment

The Department acts on behalf of the nation as steward of fishery resources and of the aquatic habitat. This involves the husbandry of these fishery resources and provision for their best use through:

- the design and implementation of strategies and programs based on a reliable scientific and technical information base;
- the institution of regulatory regimes; and
- the implementation of a variety of incentive and support measures.

It also serves the Canadian and international scientific community by providing reliable scientific and technical data, navigational charts and related publications in support of scientific and other economic interests in the oceans. The design of departmental strategies and programs takes into account policies adopted by other federal agencies and provincial governments, developments in other sectors of the national and foreign economies, and international interests and obligations.

The following factors have an influence on the Fisheries and Oceans Program:

Economic Factors: The Canadian fishing industry has an important impact on regional economies and on the Canadian economy as a whole. It provided more than 100,000 jobs for fishermen and plant workers in 1983. It produced approximately 1.3 million tonnes of fish valued as landed at $874 million. The value of derived products amounted to about $2.1 billion. As well, Canada was the largest exporter of world fishery products in 1983, with exports valued at $1.6 billion.

There are more than 42,000 private fishing crafts in Canada and approximately 990 federally-registered fish processing plants.

Approximately six million anglers, including one million visitors from other countries, are estimated to spend well in excess of $1.7 billion annually on sport fishing and wholly attributable sport fisheries investment each year.

Public investment in the fishery sector includes some 2,250 federally-maintained harbours across the country, with a replacement value of about $2 billion. This includes 1,450 facilities for small craft, commercial fishing fleets and 800 facilities for recreational and sport fishing.

Common Property Resource: The fishery is a domain wherein individuals and companies lack exclusive rights to all or part of the natural resource. Since arrangements have not been made for proprietary tenure in this area, competition among fishermen tends to have a detrimental effect. In contrast to land-based industries - farming, logging or mining - competition within fisheries tends to reduce economic efficiency.

Because the total allowable catch is finite, an investment by one enterprise to improve its efficiency actually lowers the returns of others, who in turn increase their investments to remain competitive. This vicious circle actually results in higher costs and lower net returns all round.

To some extent, the same holds true in secondary industries. Processors, competing for a fixed supply of raw fish, are encouraged to expand their facilities, thereby raising overhead costs excessively.

A related problem stems from the fact that the environment itself is a common property. Other industrial activities - logging, transportation and power development - may occupy or use areas where fish are harvested. These activities are frequently in conflict with the Department's objective of preservation and enhancement of the fish habitat. The Department, therefore, must work closely with other concerned agencies and user groups, and maintain public awareness of the implication of loss or degradation of the fish habitat.

Foreign and Domestic Marketing: As in other sectors of the economy, the primary force in fisheries growth is market expansion.

Commercial fisheries development in Canada has reflected the opportunities available in the export markets. Traditionally, Canada's major export market has been the United States. The development of export opportunities in the U.S., enhancement of the domestic market, and the diversification or penetration into new or non-traditional markets must be pursued simultaneously. Market instabilities together with currency fluctuations have adversely affected market returns in the fisheries sector.

Market expansion is retarded to some extent by deficiencies in the Canadian fisheries industrial structure, uncertainty in supply, and inconsistency in product quality. The most critical issues therefore are: improvements in cost and quality competitiveness, reduction in market instability, market expansion, promotion of Canadian fisheries products, the pursuit of better international fishery management and market access arrangements.

Expanse of Aquatic Resources: Canada borders on three oceans and has the largest area of fresh water, the longest coastline and second largest continental shelf in the world. National sovereignty and defence, shipping and foreign trade, coastal transportation and

communications, energy development, and commercial and recreational fisheries are all factors of major significance. In this context, it is essential that accurate navigational charts, related publications and information and scientific advice on ocean processes be made available. This work is undertaken in conjunction with legislation administered by other government departments.

2. New and Continuing Initiatives

Given the environmental setting, the department plans to emphasize consolidation of the management of the program in 1985-86, establishing organizational focal points for relations with provincial governments and a variety of other consultations with clients. Figure 4 displays the historical and estimated costs of existing major initiatives.

Figure 4: Cost of Existing Initiatives ($000)

	Estimates 1985-86		Estimates 1984-85	
	$	P-Y	$	P-Y
Dockside and final product grading	1,943	42	2,268	42
Generic promotion campaign	1,661	5	8,189	5
Fisheries management in Quebec	7,862	100	8,012	100
Fisheries management in the Pacific	5,489	79	5,738	79
Comissioning of the C.S.S. J.P. Tully	2,569	30	---	---
East coast winter storms investigation	483	---	---	---
Laser hydrography Arctic trials	800	4	---	---

Major initiatives in support of the Fisheries and Oceans Program are:

Dockside and Final Product Grading: Introduced in 1984-85, these elements of the Quality Improvement Program are intended to improve the quality and consistency of Canadian fish products. The industry has accepted final product and dockside grading for groundfish on a voluntary basis in 1985 with mandatory application in 1986.

Generic Promotion Campaign: First introduced in 1983-84, the program in the coming year will concentrate exclusively on the domestic market.

Fisheries Management in Quebec: The Department will continue work begun in 1984-85 to extend to Quebec fishermen the same services offered in the Atlantic provinces.

Fisheries Management in the Pacific: Work continues on development of data management systems for fisheries management, upgrading of fish habitate information base, and specialized enforcement measures. These initiatives began in 1984-85.

Commissioning of the C.S.S. John P. Tully: This new vessel, beginning operation in 1985-86, provides the Department for the first time with a permanent capability on the West Coast for carrying out both hydrographic and oceanographic activities in deep ocean and Arctic areas, particularly in the Beaufort Sea.

East Coast Winter Storms Investigation: This study, launched in co-operation with Environment Canada, will examine mesoscale (100 km) and macroscale (1,000 km) winter storms on the Canadian East Coast, in conjunction with a similar project by the U.S. with respect to its eastern seaboard. The objective is to improve the forecasting of weather, storm surges, sea waves, currents and ice.

Laser Hydrography Arctic Trials: Useful for depth measurements up to 30 metres, a laser hydrography system will undergo field trials in Arctic waters as well as in more southerly areas. The system has the potential to improve greatly the productivity of in-shore surveying.

3. Program Effectiveness

The objective of the Fisheries and Oceans Program focuses on the conservation and management of the aquatic renewable resources of Canada, the sustained economic utilization of those resources, and the undertaking of surveys and research in support of Canada's economic and scientific interests in the ocean. It is the policy of the Department to evaluate the effectiveness of the various components of the Program on a cyclical basis.

Because of the diversity of endeavours carried out by the Department, it is necessary to use several measures of program effectiveness.

- Figure 5 indicates the level of navigational charting activity carried out by the Department; see also Figure 33: Status of Surveys (page 53).
- Figures 6 to 9 illustrate the condition of those aspects of the Canadian fishing industry where the Department's endeavours have some impact.

Note: The information for Figures 6 to 9 is taken from the Canadian Fisheries Highlights 1983.

Section II
Analysis by Activity

A. Atlantic Fishery Management

Objective

The objective of the Atlantic Fishery Management Activity is to conserve, enhance and manage the fishery resource and to promote the orderly development of commercial, native and recreational fisheries.

Resource Summary

The Atlantic Fishery Management Activity represents approximately 27% of total 1985-86 Program expenditures and 32% of the total person-years.

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual* 1983-84
	$	P-Y	$	P-Y	$
Fisheries Research	57,948	718	53,431	736	
Fishery Management	62,999	952	55,068	935	
Administration	49,128	369	63,967	381	
	170,075	2,039	172,466	2,052	130,598

*Figures are not available by work-activities.

Of the total expenditures, 48% are personnel related, 34% are for operating, and 18% are for capital expenditures. The Department presently administers three major institutes and seven major vessels within the Atlantic Fisheries Management Activity. An additional institute at Ste. Flavie, Quebec, and a new offshore vessel are currently under construction.

Description

Atlantic Fishery Management involves the planning and delivery of programs through which the Department manages the fisheries resource, its habitat and the primary (harvesting) sector of the Atlantic fishing industry. The term "management" refers not only to the regulation of fishing, but also to the delivery of federal policies and programs to

the primary fisheries sector, as well as interventions into the natural resource systems. This involves measures related to conservation, protection, augmentation and culture of renewable resources.

The Atlantic Fishery Management Activity encompasses fishery management and research work in Atlantic Canada and the waters adjacent to Newfoundland, Nova Scotia, New Brunswick, Prince Edward Island and Quebec, and within Canada's 200-mile fisheries zone. It also has jurisdiction over the river systems and lakes in all of these provinces except Quebec. The Department is also responsible in the Atlantic zone for the management of 45,000 km of coastline, 300 scheduled salmon rivers where salmon regulations apply and numerous unscheduled rivers and lakes.

The Atlantic fishery affects more than 1,300 communities and employs approximately 47,000 plant workers in over 700 processing facilities. There are over 52,000 commercial fishermen operating approximately 30,000 vessels ranging in size from five to 65 metres. In addition, the Department regulates the operation of more than 300 foreign fishing vessels in Canadian waters annually. To fulfill Canada's obligations to the Northwest Atlantic Fisheries Organization, the Department must also monitor the operations of the fishing vessels from 13 countries, beyond the 200-mile limit.

To achieve effective management of the Atlantic fishery, the following work-activities are undertaken:

Fisheries Research: Research is conducted to acquire the specific knowledge needed for effective management of the fisheries and fish habitats. Projects include resource assessment, aquaculture and resource development, and habitat assessment. In addition, the Department provides scientific advice in the areas of fish health, nutrition, toxicology and physiology. The research results are published in various technical and scientific journals and form the basis for advice to clients in regulatory bodies, the fishing industry, various provincial, national and international agencies, and the general public.

The Department also provides information on environmental and human factors which influence fisheries resources and potential yields, and it produces indices of resources available for harvesting. These studies provide the basis upon which the Department can establish available management options in given circumstances. Scientific knowledge about the fishery resource and its habitat provides a foundation for policies and regulations, and is an essential element in international negotiations. The scientific data is assessed in various committees of such organizations as the Canadian Atlantic Fisheries Scientific Advisory Committee, the Northwest Atlantic Fisheries Organization and other international commissions, and through peer review as part of the publication process.

Fishery Management: The principal tasks undertaken by this work activity include:

- the establishment of the total allowable catch (TAC) levels and other regulations;
- development of management plans for the allocation of various fisheries based on consultations with various user groups;
- controlling access to various fisheries through domestic and foreign licensing regimes;
- the monitoring and surveillance of fisheries activities; and
- the conservation and protection of fishery stocks and their habitat through the enforcement of acts and regulations.

Through offshore surveillance, the Department also monitors the movements and operations of domestic and foreign fishing vessels and enforces management regulations within the 200-mile limit. This responsibility is carried out by aerial surveillance using long-range patrol aircraft, placing observers on domestic and foreign vessels, and the boarding and inspection of fishing vessels by fisheries officers operating from patrol boats.

Administration: This work-activity provides executive and general management and incorporates program coordination and planning at headquarters, as well as regional management and support services. Costs associated with the operation of office buildings, research institutes and stations, and the capital costs of vessels and buildings acquired by the Department for use within the Atlantic zone are included. The operating costs of ships and other field support are part of the Research and Fisheries Management work-activities.

Performance Information/Resource Justification

Fisheries Research: The performance of specific research projects can best be measured in terms of actual accomplishments in relation to forecast outputs. Figure 11 identifies highlights of the forecast outputs for 1985-86.

Figure 11: Fisheries Research Output Highlights

Project Category	Output Highlights 1985-86
Resource assessment (77% of work-activity resources)	Conduct fish stock surveys off Labrador and Newfoundland, on the Scotian Shelf, in the Gulf of St. Lawrence and Georges Bank and stocks beyond 200 miles in which Canada has an interest.
	Conduct research cruises and laboratory investigations to acquire or update knowledge on the abundance, biology, dynamics and ecology of fish stocks, marine mammals and marine plants.
	Conduct biological sampling of Canadian and foreign commercial catches in areas of major fishing activity.
Aquaculture and resource development (11% of work-activity resources)	Field test lobster disease control vaccine.
	Conduct pilot scale operations and technology development for the culture of oysters, scallops and salmon.
	Assess feasibility of genetic engineering applications to fish growt hormones.
Fish habitat research (12% of work-activity resources)	Evaluate results from investigations on the impact of acid rain on rivers and lakes.
	Evaluate use of lime as a local short-term remedy to conserve genetically distinct salmon stocks.

Fishery Management: The highlight outputs for 1985-86 of this work-activity include: the development of policies and programs aimed at stabilizing fisheries resources for Atlantic Canadian fishermen; implementing a management regime to conserve and rehabilitate Georges Bank stocks; re-examining the number of participants in Atlantic commercial salmon fishing through consultation with various user groups; the refinement of enterprise allocations for the offshore fishing fleet, and consultations with respect to potential applications of enterprise allocations in other fleet sectors. As part of the ongoing attempt to recover a significant portion of the management costs, the Department will be increasing license fees for foreign nations fishing in the 200-mile zone by 25% a year for the next four years.

In 1983, the lobster catch in Atlantic Canada was the highest on record since 1910; the Grand Banks and northern codfish stocks and the Newfoundland capelin stock continue to show signs of recovery.

It is estimated that 50% of the work-activity's resources are expended on offshore and coastal surveillance and enforcement, 27% on inland enforcement, 8% on licensing, 5% on allocation, 5% on fish habitat management, and 5% on stock rehabilitation.

Administration: Figure 12 shows the ratio of Administration person-years to the activity total.

Figure 12: Relationship of Administration Person-Year Requirements to Total Activity Person-Years

	Forecast 1985-86	Forecast 1984-85
Total activity	2,039	2,052
Administration	369	381
Percentage of total	18	19

B. Pacific and Yukon Fishery Management

Objective

The objective of the Pacific and Yukon Fishery Management Activity is to conserve, enhance and manage the fishery resource and to promote the orderly development of commercial, native and recreational fisheries.

Resource Summary

The Pacific and Yukon Fishery Management Activity represents approximately 17% of the total 1985-86 Program expenditures and 18% of the total person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual* 1983-84
	$	P-Y	$	P-Y	$
Fisheries Research	12,476	195	17,562	226	
Fishery Management	34,807	528	35,051	545	
Salmonid Enhancement	37,341	234	35,744	174	
Administration	21,665	200	22,778	287	
	106,289	1,157	111,135	1,232	89,960

*Figures are not available by work-activities.

Of the total expenditures, 44% are personnel-related, 39% are for operating costs, and 16% are for capital expenditures. The Department presently administers one major institute and three major vessels within the Pacific and Yukon Fishery Management Activity.

Description

The Pacific and Yukon Fishery Management Activity encompasses the conservation, enhancement and management of both the harvesting and the habitat of the fishery resource in and adjacent to British Columbia and the Yukon Territory. The value of the resource is $450 million (1979-1983 average wholesale value). There are approximately 17,000 commercial fishermen and 350,000 recreational fishermen within the purview of this activity.

The five species of Pacific salmon constitute the most valuable fishery resource in British Columbia and the Yukon Territory, contributing on average 64% of the total landed value of the annual

catch. The management of this resource is complicated by the thousands of distinctive stocks spawning in more than 1,500 different streams and rivers. It is harvested by the commercial, sport and native fisheries. The herring and herring roe fishery, supplying primarily the Japanese market, is the second largest contributor to the regions' fisheries in terms of landed value. This resource accounts for, on average, 16% of the total value of the annual catch. Shellfish, groundfish, and halibut account for the remaining 20% of the landed value of the annual catch, with halibut being the single largest contributor in the category.

Work-activities to achieve the management of this fishery are as follows:

Fisheries Research: This work-activity carries out research in a number of areas including:

- fisheries population biology and stock assessment, to develop better management strategies for various aquatic resources;
- culture of finfish and shellfish, to improve existing and develop new technology applicable to the commercial aquaculture sector;
- environmental biology, contaminants surveillance, and habitat impact assessment, to develop a more complete understanding of pollutant effects and habitat deterioration as a potential threat to aquatic resources; and
- fish physiology, genetics, diseases, nutrition, histology and parasitology, to conserve and revitalize the aquatic resource.

Fisheries Management: The principal tasks undertaken by this work-activity are as follows:

- to ensure the perpetuation of the fishery resource by controlling harvesting and maintaining the breeding population required to rebuild salmon stocks;
- to monitor stock abundance, distribution, composition and harvest rates to maintain and increase fish production;
- to conduct surveillance of domestic and foreign fishing vessels and industrial developers operating within the Canadian economic zone;
- to ensure compliance with conservation, habitat protection and harvesting regulations;

Salmonid Enhancement (SEP): The enhancement of salmonid stock populations involves the construction, operation, maintenance and assessment of fish culture facilities such as major hatcheries, pilot hatcheries, and spawning channels. Techniques required for the operation of remote sites and community projects are also developed and implemented. Other techniques are employed to increase the salmonid populations including the clearing of debris from natural spawning areas, the construction of fishways around obstructions and lake fertilization.

Funds have been provided for the ongoing operation and a two-year transition phase of SEP ending in 1985/86. The transition phase will support evaluations of the returns from existing projects and preparatory studies required for program continuity.

Administration: This work-activity provides executive and general management and incorporates program coordination and planning at headquarters as well as regional management and support services. Costs associated with the operation of office buildings and research facilities, the capital costs of vessels and buildings acquired by the Department for use within the Pacific Fisheries Region are included. The operating costs of ships and other field support are part of the Research, Fishery Management and Salmonid Enhancement work-activities.

Performance Information/Resource Justification

Fisheries Research: The performance of specific research projects can be illustrated in terms of actual accomplishments in relation to planned outputs. Resources are directed towards resource assessment, aquaculture and resource development, and fish habitat research. Figure 14 indicates highlights of the forecast outputs for 1985-86.

Figure 14: Fisheries Research Output Highlights

Project Category	Output Highlights 1985-86
Resource assessment (64% of work-activity resources)	Produce a stock status survey document for all species and major stocks salmon.
	Produce stock assessment reports for groundfish, herring and selected shellfish.
	Initiate programs related to the impact of the sport fishery on salmon, groundfish and shellfish.
Aquaculture and resource development (28% of work-activity resources)	Demonstrate the effect fertilization has on the in-lake survival of juvenile sockeye.
Fish habitat research (8% of work-activity resources)	Complete the analysis of the effects of municipal wastes on juvenile chinook in the Fraser River.
	Evaluate the effects on salmon of habitat loss in small streams.

Fisheries Management: Performance in this work-activity is measured in terms of accomplishments in relation to forecast outputs. Figure 15 identifies output highlights for 1985-86.

Figure 15: Fisheries Management Output Highlights

Project Category	Output Highlights 1985-86
Conservation and Protection (70% of work-activity resources)	Identify measures to ensure increased native participation in the fishery on an equitable basis and to develop the sport fishery.
Resource rehabilitation (10% of work-activity resources)	Develop a coast-wide salmon fisheries management plan designed to maximize the available catch through increased escapement made possible by enhancement and the buy-back of fishing vessels.
	Assess possibilities for future enhancement, particularly of coho chinook salmon, and natural stock rehabilitation.
Fish habitat management (20% of work-activity resources)	Complete and assess a pilot fish habitat management plan that lin fish habitat to the fisheries management plans.

Three specific indicators will be monitored to measure the performance of Fishery Management:

- as a measure of in-season management and enforcement of the commercial troll and sport fisheries, the actual harvest will be monitored against the expected harvest;

- as a measure of in-season management and enforcement of the net fisheries, the actual spawning escapement will be compared with previous actual escapement and current year target figures; and

- as a measure of surveillance, the actual number of domestic and foreign vessels boarded will be compared with pre-established targets.

In an attempt to recover part of management costs, the Department will be increasing license fees for foreign nations fishing in our 200-mile zone by 25% a year over the next four years.

Salmonid Enhancement: The Salmonid Enhancement Program (SEP) was designed with a continuous project and program evaluation feature, through the development of a five account system: the national income account, regional development account, native people account, employment account, and resource and environment account. The Department analyses impacts on national income, as well as employment and income effects related to increased salmonid production of 20 million kg annually.

The SEP contribution to the Canadian catch in 1985 is estimated at 9.1 million kg. The 1984 estimate is 4.3 million kg. The work undertaken during the transitional phase will add approximately 1.5 million kg to the Canadian catch, in addition to the production from the 23 major facilities, community economic development, and lake enrichment projects undertaken to date. The SEP contribution to the Canadian catch in 1983 was 2.9 million kg.

Administration: Figure 16 shows the ratio of Administration person-years to the activity level.

Figure 16: Relationship of Administration Person-Years to Total Activity Person-Years

C. Northwest Territories and Inland Fishery Management

Objective

The objective of the Northwest Territories and Inland Fishery Management Activity is to conserve, enhance and manage the fishery resource and to promote the orderly development of commercial, native and recreational fisheries.

Resource Summary

The Northwest Territories and Inland Fishery Management Activity represents approximately 4% of the total 1985-86 Program expenditures and 5% of the total person-years.

Figure 17: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual* 1983-84
	$	P-Y	$	P-Y	$
Fisheries Research	11,499	163	12,797	186	
Fishery Management	4,788	90	4,147	99	
Administration	5,828	67	7,160	72	
	22,115	320	24,104	357	22,360

*Figures are not available by work-activities.

Of the total expenditures, 63% are personnel-related, 30% are for operating costs, and 7% for capital expenditures. The Department presently administers two major institutes but no major vessels within the Northwest Territories and Inland Fishery Management Activity.

Description

This activity deals with federal government responsibilities for the freshwater fisheries in Ontario, Manitoba, Saskatchewan and Alberta, and the marine and freshwater fisheries in the Northwest Territories. The responsibilities vary in the different provinces and territories. In the Northwest Territories and in the Arctic Ocean, the Department has complete jurisdiction over the management of both freshwater and marine fisheries. In Manitoba, Saskatchewan, Alberta and Ontario, the management of the fisheries has been delegated to the provinces, but the federal government continues to administer programs aimed at resource protection and conservation, and maximization of returns for the fishery resource.

This activity comprises much of the Program's response to the need for new knowledge about the protection of freshwater fisheries habitats, and has developed a national and international prominence in freshwater fisheries research. In addition, applied research is conducted in the Great Lakes to meet commitments contained in the bi-lateral agreements and convention signed between Canada and the U.S.

The inland fisheries resource supports a healthy and valuable commercial and recreational fishing industry, and sustains a large traditional use by Natives. In the Northwest Territories, where the federal government manages the resource directly, the commercial fishery employs approximately 300 people and has a landed value of $1.4 million. More than 15,000 anglers participate in the recreational fisheries in the Northwest Territories. Purchases and direct expenditures on fishing-related items total over $12.8 million each year.

To ensure the well-being of the fisheries resource in Ontario, Manitoba, Saskatchewan and Alberta, the federal government carries out fisheries and habitat research and sea lamprey control. The commercial fishery has a landed value in excess of $100 million, and provides employment in areas where alternative economic opportunities are limited. The freshwater recreational fishery also contributes to the advancement of tourism and has significant impact on local economies. More than 3.1 million anglers participate in the inland recreational fisheries. Purchases and direct expenditures on fishing-related items total over $1.3 billion. Native community fisheries are important as well, given that more than half of Canada's native population lives within the jurisdiction of this activity.

In the North, there are added dimensions which are of concern to the Department including:

- a wide variety of freshwater species of fish, both anadromous and resident;
- a variety of marine fish and mammals which have not been accurately inventoried or catalogued;
- the exploitation of fishery resources for subsistence by native people; and
- commercial and recreational effects on fishery resources.

Work-activities undertaken to achieve fisheries management objectives include:

Fisheries Research: Research is carried out to acquire the knowledge necessary to manage Northern and inland fisheries and their habitat, and to provide advice to other federal departments, provincial governments, bilateral commissions and industry. Such research studies deal with the following:

- environmental problems such as acid rain and the impact of man-made reservoirs;
- enhancement and rehabilitation of fish stock populations, in cooperation with provincial governments, industry and private interest groups;
- Great Lakes research projects to fulfill federal obligations under the Water Quality Agreement and Great Lakes Fisheries Convention Act; and
- the effectiveness of water quality remedial programs, to provide technical justification for regulatory controls on pollutants and to evaluate the achievement of fishery rehabilitation goals.

Scientific information has been instrumental in the development of impact assessments in areas such as the Beaufort Sea, the MacKenzie Delta and Lancaster Sound. As well, international problems such as acid rain, phosphates in sewage, and dioxins in fish are addressed in relation to the protection and rehabilitation of the Great Lakes. The details of the research accomplishments are published in various scientific and technical journals and other publications.

Fishery Management: The Department's principal tasks in this work-activity include:

- conservation and protection of fish and marine mammal stocks through the enforcement of acts and regulations;
- the establishment of total allowable catch levels, and management systems and plans for the equitable allocation of the resource;
- monitoring and surveillance of fisheries;
- protection of fish habitat; and
- technical investigations assessing the impact of such industrial activities as hydrocarbon exploration and development, pipeline construction, hydroelectric projects, dredging and mining, and the settlement of native fishing agreements.

In the inland areas, non-delegated responsibilities for habitat protection are administered by the Department along with responsibility for fish health protection. In the Great Lakes, parasitic sea lamprey populations are controlled as part of an integrated Canada-U.S. program under the Great Lakes Fisheries Convention, to facilitate the rehabilitation of desirable fish species.

Administration: This work-activity provides executive and general management and incorporates program coordination and planning at headquarters as well as regional management and support services. Costs associated with the operation of office buildings and research facilities, the capital costs of vessels and buildings acquired by the Department for use within the Western and Ontario regions are included. The operating costs of field stations and other field support are part of the Research and Fisheries Management work-activities.

Performance Information/Resource Justification

Fisheries Research: The performance of fisheries research can best be illustrated in terms of actual accomplishments in relation to forecast outputs. Resources are directed towards resource assessment, aquaculture, resource enhancement and fish habitat research. The effectiveness of the program is evaluated by external peer reviews and assessments. Figure 18 identifies highlights of the forecast outputs for 1985-86.

Figure 18: Fisheries Research Output Highlights

Location	Output Highlights 1985-86
Inland (50% of work-activity resources)	Implement enhancement and habitat rehabilitation techniques for walleye i Dauphin Lake, Manitoba, and other inland fisheries, in cooperation with provincial governments.
	Complete a 15-year study of the impacts that a major hydro-electric development in northern Canada has on fish and fish habitat.
Northwest Territories (25% of work-activity resources)	Identify freshwater and marine habitats in the Arctic and study vessel/marine mammal interactions under the Northern Oil and Gas Action Program. Continue assessment and monitoring of fish habitats in areas of oil and g development (e.g. the Beaufort Sea, Norman Wells).
	Complete studies on the response of Arctic freshwater and anadromous fisheries (char, lake trout and whitefish) to intense exploitation.
Great Lakes (25% of work-activity resources)	Finalize a feasibility study on the rehabilitation of the Hamilton Harbour fishery.
	Identify and implement suitable diagnostic techniques to monitor contaminant effects at the individual or population level for Great Lakes fish stocks.

Fishery Management: Performance in this work-activity is measured in terms of accomplishments in relation to forecast outputs. Figure 19 identifies output highlights for 1985-86.

Figure 19: Fisheries Management Output Highlights

Location	Output Highlights 1985-86
Northwest Territories (51% of work-activity resources)	Develop a fisheries and marine mammal management program in response to land claims.
	Continue direct preventative enforcement in all areas, from Inuvik to Frobisher Bay, to curb waste caused by poor fishing, hunting and h[illegible]ng practices.
Great Lakes (49% of work-activity resources)	[illegible]vent transformation and migration of sea lamprey populations through [illegible]ical control in 33 rivers in the basin, consisting of 13 rivers in Lake Superior, 10 in Lake Huron and 10 in Lake Ontario.
	Assess abundance of larval populations, through survey of 106 streams, and adult sea lamprey trapping at 24 sites.
	Maintain sea lamprey barrier dams at 14 sites and construct an additional four barriers.
	Control infectious fish diseases under the Fish Health Protection Regulations, through testing and certification of 23 aquaculture facilities in Ontario, inspections of 50 hatchery facilities, and monitoring of 60 shipments of imported products.

Control measures applied to sea lamprey-producing streams tributary to Lakes Superior, Huron and Ontario have reduced sea lamprey populations in these lakes to about 5 to 10% of former levels. This makes possible the successful introduction of Pacific salmon and the rehabilitation of native species of trout which were virtually eliminated from the lakes in the 1940s and 1950s. Planted lake trout, Pacific salmon and other trout species continue to show excellent growth and high rates of survival in response to sea lamprey control. Additionally, natural reproduction is beginning to contribute substantially to lake trout populations in Lake Superior. Successful spawning has also been observed in Lakes Huron and Ontario. The total impact of Great Lakes angling is estimated at $1 billion annually. Without sea lamprey control the sport fishery for salmon and trout would disappear.

Administration: Figure 20 shows the ratio of Administration person-years to the activity total.

D. Services to the Fishing Industry

Objective

The objective of the Services to the Fishing Industry Activity is to provide services and infrastructure in support of the achievement of the highest practical economic returns and social benefits from the fishery resource, the fish processing industry and the exploitation of non-renewable resources.

Resource Summary

The Services to the Fishing Industry Activity represents approximately 25% of the total 1985-86 Program expenditures and 16% of the total person-years.

Figure 21: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Total	158,083	1,009	287,200	1,112	199,356

* The revenue credited to the Vote applies to the Fisheries Assistance work-activity for the sale of fish products by the Fisheries Prices Support Board. The net expenditure of this work-activity is estimated at $5 million in 1985-86 and $8 million in 1984-85.

Of the total expenditures 26% are personnel related, 31% are for operating costs, 30% are for capital expenditures and 14% are for contributions.

Description

Work-activities designed to assist both the primary and secondary fishing industry and to protect the consumer are delivered through this activity.

There are five work-activities including:

Inspection: This work-activity ensures that fish products destined for export from Canada, for import to Canada and for interprovincial trade do not present a health hazard, are of acceptable quality and are not fraudulently marketed. In addition, major emphasis is being placed on the identification and preservation of the quality of Canadian fish and fish products.

To ensure that domestically-produced fish products comply with federal regulations, departmental officials inspect fishing vessels, unloading, handling and transportation facilities, fish landings, processing plants and fish products. As well, imported fish are subjected to rigorous final product inspection upon arrival in Canada, since the foreign facilities producing these products are not inspected by the Department. Laboratory analyses are also performed on domestic and imported products.

Improvements in fish quality are achieved by certifying vessels as having met federal standards; requiring dockside grading of landings, inspecting unloading, handling and transportation facilities; rating processing plants; and requiring final product grade standards. Plans are also underway to develop standards for in-plant quality control processes.

Economics and Statistics: This work-activity has two functions:

Economic Research: This function provides economic and commercial policy analyses related to key factors affecting the future performance of the commercial, native and recreational fisheries and the effectiveness of existing and proposed fisheries policies and programs. Economic research is provided to support some significant ongoing endeavours such as: the development of new policies to improve the effectiveness of the Pacific fisheries management; the financial restructuring of major firms to improve the commercial and economic performance of the Atlantic fisheries, the development of socio-economic impact assessments including community adjustments, economic modelling, the economic impact of acid rain, and fisheries compensation related to oil and gas developments.

Much of the economic and commercial policy analysis is achieved with the active cooperation of the provinces, industry, fishermen, universities and specialized consultants.

Statistics and Analysis: This function collects, stores and analyses data required by government, industry and independent researchers with respect to the harvesting, processing and marketing sectors of Canada's fishing industry. Clients receive information in regular publications and in reports prepared for specific requirements. Ongoing publications provide statistics on fish landings, prices, production and inventory levels, exports, imports, sport fishing and key industry performance indicators. Special studies deal with the economic analyses of incomes and expenditures by fishermen, the financial and economic viability of fishing and processing enterprises under different policy régimes and forecasts of the future economic performance of the fisheries.

Fisheries Development: This work-activity comprises projects which are undertaken to provide: more efficient exploitation of fishery resources and exploration and development of new fishery resources; development, introduction and demonstration to the fishing industry of improved methods and new types of equipment for the harvesting handling and processing of fish; development and introduction of new fishery products; and identification of fisheries development needs and opportunities to design and implement appropriate regional development programs.

In the Atlantic Region, a large number of these projects are implemented through contributions to fishermen, fish processors and fisheries organizations. In the Pacific Region, projects are often carried out in co-operation with different sectors of the industry and through developmental research.

Fisheries Assistance: This work-activity has four functions:

The Fisheries Prices Support Board (FPSB): The Board was established to protect fishermen against sharp declines in prices and subsequent losses of income. It has powers: to prescribe prices for fishery products; to compensate producers for the difference between such prescribed prices and the market prices; to purchase, process, store, ship, market or otherwise dispose of fishery products; to enter into contracts and to appoint agents for the foregoing purposes. The Board also acts as a procurement agent for fishery products used in international food aid and development programs administered by the Canadian International Development Agency (CIDA) and the World Food Program.

The Fishing Vessel Assistance Plan (FVAP): This plan provides contributions for the cost of constructing new vessels to replace outdated or worn out vessels. It also provides funding for the modification or conversion of fishing vessels. The principal aims of the plan are: to assist fishermen in the initial capital outlay required in vessel replacement; to assist in vessel modification or

conversion and thereby improve quality of the landed product; and to enable fishermen to pursue a different type of fishing or improve their methods of fishing.

The Fishing Vessel Insurance Plan (FVIP): This plan makes marine insurance available to Canadian fishing vessel owners, wherever located, at the lowest possible cost. The Department plans to privatize this plan by April 1986.

The Fisheries Improvement Loans Act (FILA): This act provides a source of credit to fishermen which might not otherwise be available from the banking community. It authorizes the Minister to guarantee designated lending agencies, such as chartered banks, trust and loan companies and credit unions, against losses on term loans made to fishermen for the construction of fishing crafts and ancillary installations ashore, the purchase of vessels, engines, gear and equipment, and the major repair or overhaul of vessels, installations and equipment.

Small Craft Harbours: This work-activity provides for the operation of harbour facilities for commercial fishermen and recreational boaters in all parts of Canada. The two principal functions are to maintain and upgrade harbours and to manage them.

Harbour Maintenance: This entails the upgrading, maintenance and repair of harbour protection structures, wharves, slipways, launching ramps, breakwaters, dredging and associated services including water and electricity. Also included are cost-sharing agreements with developers and municipalities for marina development.

Harbour Operations: The Department provides for property administrative services and the overall operation of approximately 1,450 commercial fishing harbours and 800 recreational harbours to ensure their safe and economic use. Approximately 660 harbours have on-site management, 250 through leases with municipalities. Minor repairs are carried out, traffic flow is regulated, and fees for services are collected.

Performance Information/Resource Justification

Because of the diversity of tasks within this activity, performance information is displayed by work-activity.

Inspection: The Department is in the process of developing a management information system for Inspection. Parts of that system are already in place and the nature of the information being collected is reflected in the following analyses.

In order to carry out this work-activity 488 person-years and $24 million will be required in 1985-86 to perform inspections, certifications, ratings and laboratory analyses. Approximately 50 of

these person-years are used in the inspection of imported products. The Inspection work-activity is responsible for the inspection of 42,000 vessels, 2,189 landing sites and 990 registered processing plants. For the year ending December 31, 1983, there were 1,340,000 metric tonnes of fish landed in Canada and 700,000 metric tonnes of fish products produced. During 1983, 92,000 metric tonnes of fish were imported to Canada. These fish and fish products were all subject to inspection.

Beginning in 1984/85, Inspection introduced a national time reporting system. A long-term goal has been set that 55% of available inspection time will be spent on direct activities such as inspections, laboratory analyses, travel and direct supervision. The remaining time will be spent on administration, management and other support endeavours. The actual inspection effort will be reported in the 1986-87 Estimates.

An important measure of the effectiveness of the Inspection work-activity is the amount of recalled product. The majority of products have been recalled because they were aesthetically unacceptable, rather than due to health hazards. The level of recalls (Figure 22) has been relatively constant and is expected to remain at a low level.

Figure 22: Recalls

	1983-84			1982-83		
	#	Tonnes	% of Total Production	#	Tonnes	% of Total Production
Imports	4	57	0.06	2	115	0.13
Domestic product	0	0	0	0	0	0

The Department has begun rating processing plant operations to determine compliance with standards of operation, construction, sanitation and hygiene. Deficiencies have been classified as minor, major, serious or critical. An "A" plant has six or fewer minor deficiencies, while a "D" plant has a number of serious or one critical deficiency. Plants that are rated "D" have their registrations withdrawn. Plants rated "C" are subjected to more frequent inspections until improvements are completed. At this time 10% of plant operations have been rated and it is expected that all plants will be rated prior to the opening of the fishing season in each area. Figure 23 shows the percentage of plant operations in each category.

Figure 23: Plant Ratings as of October 1, 1984

A	38.3%
B	36.5%
C	15.6%
D	9.6%

Effective January, 1986, all fishing vessels will, as a condition of licensing, require certificates of compliance with federal standards. As of October, 1984, 60% of vessels had been certified. Plant and vessel requirements are only two elements that impact on the quality of fish products and suitability for consumption.

The Department has the authority to order that fish products be destroyed or not used for human consumption. As a result of an inspection, a processing plant may be closed or its certificate of registration withdrawn. Figure 24 shows the number of such actions required since 1982-83.

Figure 24: Enforcement Actions

	1983	1982
Domestic destruction (tonnes)	8,600	7,300
Import rejection (tonnes)	2,468	1,448
Plant closure and registration withdrawal*	165	98

* Closures are for varying lengths of time to permit plants to undertake corrective action.

In 1985-86, the Department will begin recovering the costs of import inspections by charging fees for its services.

Economics and Statistics: This work-activity is project-oriented. Performance can best be represented in terms of output highlights. Figure 25 identifies output highlights for 1985-86.

Figure 23: Economics and Statistics Output Highlights

Project Category	Output Highlights 1985-86
Economic analysis (82% of work-activity resources)	Conduct two studies to assess the financial health and future performance of the Atlantic and Pacific processing sectors in terms of changes in the market and potential improvements in plant productivity.
	Evaluate the economic impact on fishermen and processing companies of a comprehensive new B.C. fisheries policy and of measures to improve the economic viability of the Atlantic fisheries.
	Evaluate the structure and operation of the Newfoundland fishery in terms of future corporate plans for FPI and measures for reducing harvesting and processing costs and improving quality.
	Evaluate the economic costs associated with the impact of acid rain on fisheries resources.
	Evaluate the economic impacts of the recreational fisheries and undertake a nation-wide survey of sport fishermen in cooperation with provincial governments.
Statistics and analysis (18% of work-activity resources)	Improve fisheries statistics to more accurately reflect the financial and economic performance of the harvesting and processing sectors.

Over the past three years, the development and utilization of a computerized simulation model has assisted in the successful implementation of an enterprise allocation system by the offshore companies and the Department in the Atlantic region. The comprehensive survey and analysis, completed for Canadian fish processors and fishermen, also provided a fundamental understanding of the fisheries financial structure and performance necessary for the development of the restructuring plan for the Atlantic deep-sea fishery and the Pacific fisheries policy.

Fisheries Development: This work-activity is project-oriented. Performance information is outlined in Figure 26 showing output highlights.

Figure 26: Fisheries Development Output Highlights for 1985-86

Project Category	Output Highlights 1985-86
Fisheries development (76% of work-activity resources)	Second year of a five-year comprehensive development plan for Prince Edward Island and New Brunswick fisheries under ERDA (Economic Regional Development Agreement).
	Final year of a five-year program for development of processing sector and infrastructure in New Brunswick.
	Third year of a five-year expenditure program related to resource development, fleet upgrading and modernization, new product development and planning studies in Quebec.
Atlantic ice-making/storage (13% of work-activity resources)	Second year of five-year program to increase ice-making and storage capability in the Atlantic fisheries.
Special capital recovery projects (11% of work-activity resources)	Complete construction of bait and saltfish facilities in Quebec.

The program has recently assisted in the development of the new automated self-hauling rope reel, automated longline systems and inshore vessel holding and handling systems in the Atlantic Region. Golden Caviar, a new fishery product developed in the Western Region, won the Gordon Royal Maybee Award in 1983. The caviar adds about 30% to the value of the whitefish catch, creates seasonal employment in the processing sector and has turned a formerly discarded by-product into a valuable food.

Fisheries Assistance: The performance of this work-activity can best be described by reference to its four functions:

Fisheries Prices Support Board (FPSB): Programs are initiated only where needed to compensate for sudden price declines or other adverse events beyond the control of the industry. A major factor in the FPSB is to ensure the stability of earnings for the harvesting and processing sectors. Purchases of fishery products for international food aid programs provide an outlet for catches and production which could either find no buyers or stay in storage for many months, accumulating higher costs and deteriorating in quality. Thus, canned mackerel is purchased from processors for resale to CIDA to help meet its food fish requirements in international food aid and development programs. Total purchases are expected to amount to $3.5 million, all of which will be recouped through sales to CIDA.

Fishing Vessel Assistance Plan: In 1983-84, funding was provided to assist in the construction, modification and/or conversion of 810 vessels. Over the past five years, funding has been provided for 2,650 fishing vessels. This program has had considerable effect on fishing communities and fishermen in terms of both job creation and the ability of fishermen to replace their vessels. It is estimated that funding will be provided for some 600 to 800 vessels in 1985-86.

Fishing Vessel Insurance Plan: The Fishing Vessel Insurance Plan insures approximately 20% of the registered fishing vessels in Canada while private insurance companies insure approximately 12%, primarily the more expensive offshore fleet. The Department plans to privatize this plan by April 1986.

Fisheries Improvement Loans Act: Under this program, loans totalling $16 million were guaranteed in 1983-84. Guarantees with lenders historically have claims of 0.75% of amounts guaranteed. With the recent downturn in the economy, claims have increased to over 5% of amounts guaranteed. Approximately 1% of 80,000 registered Canadian fishermen take advantage of this program annually.

Small Craft Harbours: Standards relating to the condition of the harbour facilities and the level of services provided have now been established in Departmental Guidelines on Accommodation. Work in 1985-86 will finalize the review of all harbour facilities and operations for two principal concerns; the need for harbour facilities and a determination of the level of service to be provided. Results of these examinations will be used to allocate the resources for harbour upgrading, reconstruction, and operations and maintenance. In 1985-86, the Department will be increasing berthage fees in an attempt to recover part of the management costs.

Approximately 85% of the expenditures are spent on commercial fishing harbours, with the remaining 15% being spent on recreational harbours, primarily in Ontario, British Columbia and Quebec. Figure 27 illustrates Small Craft Harbours expenditures by fisheries regions.

Figure 27: Small Craft Harbours Expenditures by Fisheries Regions ($000)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Pacific	7,091	13,184	17,613
Western	785	715	807
Ontario	3,289	19,678	17,607
Quebec	18,777	32,071	16,875
Gulf	9,900	27,053	23,569
Scotia-Fundy	6,575	23,968	19,497
Newfoundland	6,184	11,537	10,918
Headquarters	7,369	2,798	1,648
	59,970	131,004	108,534

It should be noted that resource levels, particularly during the period from 1983-84 to 1985-86, have been enhanced by special economic recovery and job creation programs. For example, in 1984-85, the Department anticipates it will spend over $100 million through special program funds to maintain and develop harbours.

Information on the effectiveness of this work-activity will show the vessels' utilization of departmental harbours complying with minimum standards for both physical condition and the level of service and will be reported in the 1986-87 Expenditure Plan.

Major capital projects for this work-activity are shown on page 62 of this Expenditure Plan.

E. Marketing and International Fisheries

Objective

To increase domestic and international sales for Canadian fish and fish products, maximizing the financial returns from the marketplace and preparing and negotiating Canadian fisheries positions in the international arena to ensure the protection and maintenance of Canadian interests.

Resource Summary

The Marketing and International Fisheries Activity represents approximately 2% of the 1985-86 total Program expenditures and 1% of the total person-years.

Figure 28: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual* 1983-84

	11,667	61	18,118	52	12,178

*Figures are not available by work-activities.

Of the total expenditures, 26% are personnel-related, 73% are for other operating costs and 1% is for capital. All personnel under this Activity are located at headquarters.

Description

This activity comprises two work-activities: Marketing and International Fisheries.

Marketing: This work-activity has three functions:

Promotions: Strategies are developed for promotion and advertising on the basis of extensive consumer research, market trends, and industry and trade consultation. Promotional programs are designed to improve the image of Canadian fish and seafood products and to increase fish consumption and market returns to the industry.

Marketing Programs and Extension Services: The Department develops and implements pilot projects and programs designed to improve market performance, product competitiveness and returns in the fishing industry.

Market Intelligence and Planning: A variety of services are provided to enhance the capability of the industry and government to make better marketing decisions based on more accurate, timely and relevant market intelligence.

International Fisheries: Work is carried on in the following areas:

Atlantic and Pacific Relations: These functions are accountable for policies, strategies and programs aimed at developing and protecting Canada's interests through international fisheries agreements, as well as boundary delineation. They manage fisheries' relations with countries bordering on and near the North Atlantic Ocean and Pacific Ocean. To achieve national fisheries conservation and development objectives, these functions deal with lowering of tariffs and removal of non-tariff barriers, expansion of access to foreign markets, and protection of existing fish stocks and markets.

Aid and Technical Assistance: This area is accountable for policies, strategies and programs, in cooperation with other departments and agencies such as CIDA, relating to technological development of Third-World fisheries, promotion of new commercial markets in South East Asia and Africa and the provision of food and technical aid through international agencies.

International Commissions: The Department participates in nine international fisheries scientific and conservation commissions, which are non-discretionary obligations on behalf of Canada.

Performance Information/Resource Justification

Marketing: This work-activity is project-oriented and its performance is best assessed in terms of forecast outputs. Figure 29 identifies output highlights for 1985-86.

Figure 29: Marketing Output Highlights

Project Category	Output Highlights 1985-86
Promotions (60% of work-activity resources)	Develop, produce and distribute promotional materials (e.g. recipe booklets, posters, food photography), including development of two publications and reprinting of six.
	Coordinate industry and government participation in four domestic and 10 international shows, exhibitions and missions.
	Generic advertising program aimed at consumers, trade and industry to increase awareness and sales of fish and seafood products in the domestic market.
	Implement Neptune Awards for exemplary merchandising by the retail an food service trade.
Market intelligence and planning (25% of work-activity resources)	Four market assessment trade missions, to Japan, Denmark, France and the Caribbean.
	Develop and implement species marketing plans for cod, herring and capelin.
Programs and extension services (15% of work-activity resources)	Install Mico-Plan systems, micro-computer-based costing and planning systems, in 15 fish plants across Canada.

International Fisheries: This work-activity is primarily concerned with various international negotiations. Highlights of the forecast outputs for 1985-86 are shown in Figure 30.

Figure 30: International Fisheries Output Highlights

Project Category	Output Highlights 1985-86
Atlantic relations (4% of work-activity resources)	Establish fisheries agreements with bilateral partners (Eastern and and Western Europe) involving market expansion, improvement in market access and cooperation on conservation.
	Improve conservation and market positions with the U.S. on east coast (Gulf of Maine) fisheries issues and improve position with France on boundary and fisheries issues.
Pacific relations (5% of work-activity resources)	Develop strategies affecting Canada's fisheries interests with respect to Pacific and Arctic coasts boundary areas under dispute with the U.S.
	Expand South American markets for Canadian fish products.
	Expand markets and improve access for Canadian products to Japanese markets.
Aid and technical assistance (1% of work-activity resources)	Establish new commercial markets in South East Asia and Africa.
	Increase Canada's fish contribution to the Third World Food Aid program.
International commissions (90% of work-activity resources)	Implement Canada's commitments to nine international fisheries commissions and other multilateral institutions.

International negotiations carried out by this work-activity result in the continued maintenance of markets for Canadian fish products and the ongoing cooperation of bilateral fisheries partners in conservation measures. Over the past three years, the Portuguese market has expanded from minimal trade to a $50 million market. New markets have been developed in Cuba ($1.5 million), and the German Democratic Republic ($2.0 million). In other cases, such as Japan and the European Economic Community (EEC), agreements are designed to expand market access for well-developed markets (in excess of $200 million each).

F. Ocean Science and Surveys

Objective

The objective of the Ocean Science and Surveys Activity is to promote and facilitate the safe use of Canada's navigable waters and to provide information and advice contributing to the environmentally-acceptable utilization of marine renewable and non-renewable resources, and to ensure the effective coordination of the policies and programs of the Government of Canada with respect to ocean science and technology.

Resource Summary

The Ocean Science and Surveys Activity represents approximately 20% of the total 1985-86 Program expenditures and 22% of the total person-years.

Figure 31: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual* 1983-84
	$	P-Y	$	P-Y	$
Hydrography	41,440	541	43,024	542	
Oceanography	50,432	584	48,048	584	
Administration	33,985	264	44,126	274	
	125,857	1,389	135,198	1,400	96,943

*Figures are not available by work-activities.

Of the total expenditures, 47% are personnel-related, 32% are for operating costs and 21% are for capital expenditures. The Department presently administers two major institutes and nine major vessels within the Ocean Sciences and Surveys Activity. This activity will also share the new institute presently under construction in Ste. Flavie, Quebec with the Atlantic Fishery Management.

Description

This activity comprises three work-activities: Hydrography, Oceanography and Administration.

Hydrography: Hydrographic endeavours have been organized as a separate entity, called the Canadian Hydrographic Service (CHS), since 1883.

The major tasks undertaken by the Hydrography service include:

- the preparation, maintenance and distribution of corrected Canadian navigation charts, geoscience maps, and related navigational publications; Sailing Directions; Small Craft Guides; tide, current and water-level tables; and Notices to Mariners;

- hydrographic surveys which are carried out in Canada's navigable waters and the processing of data collected to produce charts, and related publications;

- the measurement of tides, currents and water levels, and the processing of data to produce tide and current tables, current atlases and water level bulletins in cooperation with the Department of the Environment;

- research and development, primarily through contracts with industry, for improved surveying, positioning and charting methodology and equipment, and the transfer of the resulting technology to Canadian industry;

- the provision of data, information and expertise relevant to the delineation of marine boundaries; and

- the provision of ships, positioning data and bathymetric measurements, and the subsequent production of geoscience maps, providing bathymetric, magnetic, gravimetric, geomorphological and surficial geological information, through a long-standing Memorandum of Understanding with the Department of Energy, Mines and Resources.

Oceanography: Increased knowledge and understanding of ocean properties, processes and phenomena are obtained through continuing research programs in physical and chemical oceanography and marine ecology. Oceanographic research addresses existing and potential problems in such areas as fishery management, defence, shore-based and offshore industrial developments, marine pollution control, marine transportation, and climate prediction. The research is concerned with coastal waters, continental shelves and the deep oceans, with a particular concern for Arctic waters. While it concentrates on Canadian waters or international waters of Canadian interest, there is also participation in international programs. The major tasks of the Oceanography work-activity include:

- provision of science services such as: the acquisition, recording and storing of all oceanographic, tidal and water level data collected in Canadian waters; the processing and provision of oceanographic data and information products as a national service; the publication of scientific papers and reports; and the provision of scientific advice and expertise to the marine community;

- research in physical oceanography, encompassing the study of the physical properties, processes and phenomena in marine waters;

- research in chemical oceanography, including the study of the flux, distribution and behaviour of organic and inorganic materials from natural and man-made sources;

- research in marine ecology, including the study of marine ecosystems and their relationship with the physical and chemical environment;

- technology development and transfer, involving development of methods, techniques and instrumentation for ocean sciences, and the transfer of ocean technology to the Canadian business sector and developing countries;

- participation in ocean science and technology programs in domestic and international organizations concerned with ocean sciences and policies; and

- the provision of grants and ship and facility support on a negotiated cost recovery basis for ocean-related research and research training in Canadian universities, and the provision of ship and facility support to other interested government departments and agencies.

Administration: This work-activity provides executive and general management and incorporates program coordination and planning at headquarters as well as regional management and support services. Costs associated with the operation of office buildings and research facilities, the capital costs of vessels and buildings acquired by the Department for use within the activity are included. The operating costs of ships and other field support are part of the Hydrography and Oceanography work-activities.

Performance Information/Resource Justification

This activity provides support to various economic and scientific interests, such as fisheries, the environment, energy, defence and marine transportation.

Hydrography: Several factors have been identified as indicators of the effectiveness of the Hydrography activity in meeting its objectives:

- the provision of high quality charts and navigation publications have resulted in fewer marine accidents. Potential navigational problems in coastal channels and harbour developments are identified;

- the provision of hydrographic and navigational information meets the needs of fishermen, boaters and defence;

- offshore surveys with the Department of Energy, Mines and Resources provide resource developers and geoscientists with bathymetric, geological and geophysical data, and assist in the delineation of marine boundaries; and

- major improvements in both surveying and chart production have improved the quality of survey and cartographic services.

Highlights of hydrography outputs for 1985-86 are provided in Figure 32.

Figure 32: Hydrography Output Highlights

Task	Output Highlights 1985-86
Navigational charts (note 1):	New 25 New editions 94 Reprints 120
Geoscience maps*:	5 natural resource maps (1:250,000). 22 sheets of regional resource maps series. 3 marine science papers. Maintenance of digital bathymetric data base.
Sailing directions:	6 English, 7 French editions.
Notices to mariners**: (34% of work-activity resources)	600
Field surveys:	The annual survey program covers approximately 20,000 km^2 (see note 2).
Tides, currents, water Level measurements: (57% of work-activity resources)	Maintenance and data collection for 120 permanent gauges, data collection for 25 temporary gauges.
Research and development (9% of work-activity resources)	Programs concerned with improvements in both surveying and chart production (see note 3).

* Jointly with the Department of Energy, Mines and Resources
** Jointly with the Canadian Coast Guard, Transport Canada.

Note 1: A new edition requires the replacement of previous charts; a reprint does not.

Note 2: The Canadian Hydrographic Service maintains an annual survey program. The areas to be surveyed in 1985-86 are:

- Atlantic Region: Eastern shore, Nova Scotia; Pt. Lepreau, New Brunswick; North West Coast, New foundland; Labrador Coast and Hudson Strait; Jones Sound; and Wellington Channel.
- Quebec Region: Iles-de-la-Madeleine; and North Shore of Gulf of St. Lawrence.
- Central Region: Gulf of Boothia and Eastern Hudson Bay; Lake Erie Harbours; North Channel, Lake Huron, and Upper St. Lawrence.
- Pacific Region: Mackenzie River; West Coast, Queen Charlotte Islands; Dolphin and Union Strait; Tofino Inlet, Vancouver Island; and Loran-C calibration of inshore charts.

Note 3: DOLPHIN, the new remotely-controlled semi-submersible hydrographic vessel, will begin normal production operations. The new laser hydrography system will be used under normal operating conditions in Arctic surveying and the Global Positioning System will begin to be used on survey vessels and in calibrating the Loran-C system.

The complete delineation of Canada's navigable waters requires about 1,000 charts. Approximately 50% of southern waters are charted to modern standards and only 18% of northern waters are charted at all. Currently the situation in both areas is improving at about 3% annually. Because of the requirement to convert all charts to the metric system while maintaining those charts still in the imperial system, the present capacity to produce new charts or editions is about 25 per year. This implies that, on average, a new chart or new edition will be prepared once every 40 years. If economic developments and the use of deeper draught shipping require updating charts more frequently in certain areas, other areas will not be charted adequately for much longer periods of time. The present status of Canadian charting is shown in Figure 33.

Figure 33: Status of Surveys

Priorities for hydrographic surveys and chart production are based on such factors as the numbers of requests from non-governmental users, vessel traffic in given areas, the adequacy and accuracy of existing data, and the stability of the ocean bottom. There are four priority

classes: urgent information to ensure safety and aid commerce; revisory surveys and cyclic chart revisions; future economic development, defence and political requirements; and systematic surveys to update charts to modern standards. An independent assessment has indicated that CHS has widespread support and is satisfying the needs of its clients in all sectors although CHS is not able to respond quickly enough to specific requests.

Oceanography: Effectiveness in Oceanography can be measured by the quality of research and the provision of adequate scientific data, information and advice to government and the private sector. The results of this work-activity are described below:

- there is an increased understanding of ocean processes and phenomena and of the influence of physical and chemical factors on biological productivity and the food chain, including pollution effects, through oceanographic research and data. Canada's scientific reputation has been enhanced and a pool of expertise has been created; this enables Canada to engage in international action on marine scientific problems and to influence international proceedings and negotiations, regulations and standards;

- both the government and the private sector are provided with data, information and advice on sea states, such as wave climate, currents, sea ice, and iceberg predictions; governments and industrial developers are advised of the environmental impact of proposed onshore and offshore developments and dredging, and ocean dumping activities; as well, scientists and engineers are provided with data and information required for the design and operation of safe coastal and offshore facilities; and

- essential facilities, in particular ship support, are provided for use by other government departments and agencies and to university researchers. Ocean-related research and training, in Canadian universities and in the Department's own laboratories, are supported through subventions and post-doctorate fellowships. Assistance in the development of an increasingly internationally-competitive ocean industry in Canada is provided through research and development, joint development projects, government orders for equipment and systems, and scientific advice and assistance.

The scientific and program rationale and planned milestones are documented for each of the several hundred projects. These endeavours are subject to internal annual review, periodical peer review, and regular scheduled program evaluation studies.

Highlights of forecasted outputs of the three research disciplines, physical and chemical oceanography and marine ecology, as well as science service and support to others for 1985-86, are illustrated in Figure 34.

Figure 34: Oceanography Output Highlights

Function	Output Highlights 1985-86
Physical oceanography (34% of work-activity resources)	Complete large-scale heat budget calculations in North Atlantic/Labrador Sea. Conduct long-term current studies of Labrador Shelf and Slope. Conduct preliminary description of currents and water properties off the west coast of Queen Charlotte Islands. Conduct studies of water circulation and of river plumes in Hudson's Bay. Operate a National Wave Climate study. Conduct studies of large scale ocean circulation in relation to atmospheric behaviour. Conduct study of dynamics of Arctic Ocean.
Chemical oceanography (10% of work-activity resources)	Assess chemical conditions in northern Hudson's Bay and Strait. Complete field studies on cadmium exchange among dissolved, particulate and biological phases. Complete a chemical model of Alice Arm and Kitimat Arm concerned with the interaction of pollutants and sedimentary processes. Assess chemical contamination in the Gulf of St. Lawrence.
Marine ecology (21% of work-activity resources)	Complete study of marine invertebrate detoxification mechanisms and of sub-lethal bioassays of pollution effects on fish. Conduct laboratory studies of zooplankton behaviour and physiology to compare feeding rate, metabolism and motility to field-determined population growth. Conduct study of the effect of oceanographic parameters on the survival of fish larvae. Publish studies on Arctic zooplankton.
Science services (15% of work-activity resources)	Produce standard products (tables, atlases). Conduct special analyses from computerized bases of wave, tide, current and water level data, physical and chemical oceanographic data. Archive all industry-supplied oceanographic data and respond to 800-900 requests per year. Conduct full operational use of the image analysis facility for processing satellite and other oceanographic data. Adopt the Seabed II Deep Ocean Mapping System as fully operational equipment.
Support to others (20% of work-activity resources)	Provision of ship-time and ancillary services to other Departments and to university researchers.

Departmental scientists have recently shown that picoplankton (bacteria-sized organisms which were largely unknown before 1979) account for about 50% of the plant production in the ocean. This breakthrough changes estimates of world ocean productivity, potential fish production and the influence of the ocean on the global carbon dioxide cycle.

Progress has also been made relating to the CO_2-climate problem. In 1983, measurements showed that in one of the peak periods, lasting about three weeks, 10 to 20% of daily surface plant production was precipitated to the deep ocean. Generally, global carbon studies have assumed a 1% rate of carbon loss from surface water. These results

suggest that the precipitation process is very efficient and/or productivity has been underestimated in the past. This is an important finding on the global study of the CO_2-climate problem.

The Department has contributed significantly to the support and development of government regulatory functions and environmental assessment and review process for several gas and oil developments, and nuclear power stations. The technical and policy positions presented by the Department have been strongly reflected in the conclusions and recommendations of the review panels. Timely acquisition of the knowledge relevant to Arctic and offshore exploration has been achieved by a shift in research priorities and by the use of supplementary funding from other programs and agencies, such as the National Energy Program and Northern Oil and Gas Activity Program.

Administration: Figure 35 shows the ratio of Administration person-years to the activity total.

Figure 35: Relationship of Administration Person-Year Requirements to Total Activity Person-Years

	Forecast 1985-86	Forecast 1984-85
Total activity	1,389	1,400
Administration	264	274
Percentage of total	19	20

G. Corporate Administration

Objective

The objective of the Corporate Administration Activity is to provide management direction, policy and planning coordination, and corporate administrative services for the Program.

Resource Summary

The Corporate Administration Activity accounts for approximately 6% of the total 1985-86 Program expenditures and 6% of the total person-years.

Figure 36: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84
	$	P-Y	$	P-Y	$
Corporate Administration	35,038	378	41,153	387	57,642

Approximately 45% of this activity's total expenses relate to personnel costs, 50% to operating costs and 5% to capital expenditures.

Description

Corporate Administration provides executive management services to the Program as well as corporate administrative and support services. The following operations are included in this activity: the offices of the Minister, Deputy Minister and Associate Deputy Minister; office of the Assistant Deputy Minister, Finance and Administration, together with corporate finance, planning, information technology and systems and administrative services; office of the Assistant Deputy Minister, Policy and Program Planning, together with strategic policy and planning, federal/provincial relations, program planning, and program evaluation; communications, personnel, internal audit, legal and translation services; and the Chairman of the Fisheries and Oceans Research Advisory Council. Regional administrative services are not included here, but are under the Administration work-activity within each activity.

Performance Information/Resource Justification

Figures 37 and 38 show the ratio of Corporate Administration expenditures and person-years to the Program's total.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 41 summarizes the Program's capital by activity.

Figure 41: Capital Summary by Activity ($000)

Contribution to the Town of Fort Frances, Ontario to assist in the defrayal of the capital costs of rehabilitating a wharf	—	---	30,000
Contribution towards the development of Transboundary River Fisheries	—	---	245,000
(S) Liabilities under the Fisheries Loans Act	3,000,000	4,000,000	3,960,000
	22,155,250	39,389,515	26,136,000
Ocean Science and Surveys			
Contribution to the Auto-Carto Six conference on computer assisted cartography	—	---	10,000
Corporate Administration			
Contribution to the Canadian Science Writer's Association to defray the cost of an annual award for science writing in the area of science and natural resources	1,500	1,500	1,000
Contribution for the Fisheries Resource Employment Development for Youth		4,434,885	
Total contributions	22,164,750	44,716 000	26,562,000
Total grants and contributions	22,891,750	50,550,000	27,869,000

B. Cost Analysis

The 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered when describing the Program on a full-cost basis. Also to be taken into account are any revenues generated by the Program that are credited directly to the Consolidated Revenue Fund. Other costs shown consist of the cost of accommodation services provided by the Department of Public Works ($12,620,000) and other services provided without charge by other departments ($462,000) but do not include accommodation provided without charge by this Department.

Figure 44: Net Operating Cost of Program by Acitivity for the Year 1985-86 ($000)

	1985-86 Operating Costs	Add Other Costs	Total Cost	Deduct Revenue	1985-86 Net Cost	1984-85 Forecast
Atlantic Fishery Management	170,075	4,551	174,626	9,986	164,640	171,319
Pacific and Yukon Fishery Management	106,289	4,383	110,672	7,318	103,354	109,746

Services to the Fishing Industry	161,583	1,282	162,865	14,835*	148,030	285,424
Marketing and International Fisheries	11,667	1,010	12,677	---	12,677	18,313
Ocean Science and Surveys	125,857	112	125,969	3,846	122,123	138,128
Corporate Administration	35,038	1,113	36,151	30	36,121	42,068
	632,624	13,082	645,706	36,140	609,566	789,956

*Includes $3,500K - Revenue credited to the Vote.

C. Revenue Analysis

Figure 45: Revenue by Class ($000)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Revenue credited to the Vote			
Sale of fish products by the Fisheries Prices Support Board	3,500	3,500	957
	3,500	3,500	957
Revenue credited to Consolidated Revenue Fund			
Licences and permits	11,408	9,595	8,782
Return on investment	3,400	3,200	3,083
Small craft harbours revenue	4,202	3,038	2,501
Sportfish licences	2,800	1,700	1,662
Sale of bait, fish and fish eggs	1,840	1,535	1,579
Sale of charts and publications	1,639	1,250	1,194
Fines and forfeitures	835	749	804
Rental of insulated containers	1,000	600	815
Refund of previous years' expenditures	133	291	1,602
Rental of land, buildings and equipment	370	335	316
Sale of sealskins	30	20	15
Other service and service fees	91	91	121
Charges for Oceanographic Services	75	---	---
Import inspection fees	1,000	---	---
Cost recovery of university ship time	2,000	---	---
Sale of land and buildings	1,800	---	---
Miscellaneous	17	17	210
	32,640	22,421	22,684
Total revenue	36,140	25,921	23,641

As part of the ongoing attempt to recover a significant portion of the management costs, the Department will be increasing berthage fees and foreign license fees; and will be initiating research services fees and inspection fees on imported products.

D. Fisheries and Oceans' Fleet

Fisheries and Oceans operates an extensive marine fleet made up of its own vessels and chartered vessels. The vessels are used for fisheries research, fisheries surveillance, oceanographic research, hydrographic surveys, and also the provision of platforms in support of the programs of other departments, agencies and institutions. Included is the provision of a search and rescue capability. The total cost of the marine fleet is $43 million and 1,100 person-years with an additional $21 million in vessel charters.

There are approximately 242 vessels in the fleet of Fisheries and Oceans. Figure 46 shows particulars of the major ships in the fleet.

Foreign Investment Review Agency

1985–86 Estimates

Part III

Expenditure Plan

1783

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Foreign Investment Review Agency

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the proposed Investment Canada program as well as information on the present Foreign Investment Review Agency program. The overview of the proposed Investment Canada program includes a general description, information on its background and objectives and a planning perspective. The information on the Foreign Investment Review Agency program includes a brief description and background as well as performance information. Section II provides further information on costs and resources as well as special analyses.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $6,421,083 in support of the Foreign Investment Review Agency in 1985-86. The remaining expenditures, estimated at $763,292 for contributions to employee benefit plans will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

On December 7, 1984, the Government tabled Bill C-15, the Investment Canada Act, in the House of Commons. The proposed legislation would establish a new Agency, Investment Canada, which is intended to encourage and facilitate investment in Canada and to review larger acquisitions by non-Canadians of Canadian businesses (see page 8). On promulgation of the Investment Canada Act, the Foreign Investment Review Act would be repealed.

As a result of this important new initiative by the government, the Program would undergo radical changes in 1985-86. The new legislation would require a redefinition of the existing Program in response to a different mandate. It would be necessary to develop and implement new policies and procedures to effectively carry out its new responsibilities and the current organization structure would be changed to meet the needs imposed by the new legislation.

B. Financial Summary

Until such time as the legislation is enacted and the Program specifically defined, it is not possible to develop detailed resourcing requirements. Consequently, current resourcing plans provide for funding to March 31, 1985 based on the forecasted level of ongoing FIRA activities and the continuation of funding at this level for 1985-86. Any necessary adjustment to resourcing requirements is expected to be made through the normal Supplementary Estimates process when more detailed information is available. Figure 1 summarizes the current financial requirements.

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Administration	7,184	6,955	229
Person-years	136	136	-

* There has been no significant change from the 1984-85 Estimates. The 1984-85 forecast is $10,000 less than the 1984-85 Estimates of $6,965,000 (Extracts from Part II of the Estimates, page 4).

Explanation of Change: The increase of $229,000 or 3.3% in financial resources requested for 1985-86 is made up of the following major items:

	($000)
• an increase of 3.9% in salary costs	217
• an increase in statutory payments to Employee Benefit plans	81
• a decrease in operating costs	(69)

C. Planning Perspective

1. Environment

As part of its strategy to help generate economic renewal in Canada, the Government announced in the Speech from the Throne on November 5, 1984 that "initiatives will be taken to stimulate both domestic and foreign investment". The Government is of the view that there are benefits to Canada from Canadian and non-Canadian investment and that all steps should be taken to encourage and facilitate the flow of Canadian and non-Canadian capital to create job opportunities, to attract specialized technology and know-how, and access to worldwide marketing. While Canada is fundamentally attractive to non-Canadian investors, in recent years, its reputation as a host to international investment has been called into serious question. The Foreign Investment Review Act has been cited as a major irritant that has coloured the international investment community's perceptions of Canada as a place to do business.

Bill C-15, the Investment Canada Act, represents a major step by the Government to change those perceptions. The new Bill reflects a new attitude. Unlike the Foreign Investment Review Act, Bill C-15 recognizes the positive contribution that non-Canadian capital can make to Canada.

2. Introduction to Investment Canada Proposal

Background: On December 7, 1984 the Government tabled Bill C-15, the Investment Canada Act, in the House of Commons. This Bill reflects the Government's intention to establish a climate that will encourage investment in Canada by both Canadian and non-Canadian investors. The Bill provides for the establishment of a new agency, Investment Canada, to help to carry out the Government's objective in this regard.

In concert with the private sector and provincial governments, Investment Canada would work with trade services in Canada and abroad to encourage and facilitate investment in Canada. Using this network of contacts and resources in the public and private sectors, the Agency would identify investment opportunities

and help investors to transform these opportunities into jobs, new technology and real economic growth.

The new legislation also recognizes the contribution that small and medium-sized business can make in providing employment, establishing new businesses and markets and introducing new technology and products. It is anticipated that Investment Canada would have a special responsibility to encourage this kind of investment.

While the government intends to retain the authority to ensure that major acquisitions by non-Canadians are of benefit to the economy, the process by which such acquisitions are reviewed would be dramatically altered. As well, although Investment Canada would continue to review important acquisitions, the total number of investments subject to review would be substantially reduced and the process would be faster and simpler. The proposed changes would:

- eliminate from review almost all investments to establish new business in Canada;
- eliminate from review most acquisitions of businesses in Canada by non-Canadians except for major acquisitions that can have an important impact on the economic, industrial or cultural interests of Canada;
- provide the authority to review smaller acquisitions and the establishment of new businesses in culturally sensitive sectors such as book publishing, film production and distribution;
- recognize the difference between acquisitions of businesses in Canada where the majority of assets in the transaction are located in Canada, and those where the Canadian assets are only part of a larger transaction which occurs outside Canada; and
- ensure speedy decisions on proposals that require review by establishing firm deadlines, by simplifying the decision-making process and by providing advance consultation to potential investors.

Program Objective: Some general statements of the nature of the objective of the proposed new Program are as follows:

- to contribute to economic growth and employment opportunities in Canada by encouraging and facilitating investment in Canada by Canadians and non-Canadians and by ensuring that important new investment by non-Canadians is of net benefit to Canada;
- to increase the awareness and understanding of the objectives of Parliament and the Government with respect to investment in Canada by Canadians and non-Canadians;

- to encourage and assist Canadian businesses to exploit opportunities for investment and technological transfer;
- to provide investment information and other services to facilitate growth in the level of economic activity in Canada;
- to encourage and assist non-Canadian investors in the development of investment proposals, compatible with the interests of Canada;
- to ensure that non-Canadian investors and their proposals are dealt with courteously, fairly, adequately and expeditiously;
- to contribute to and be in concert with relevant policies and objectives of the Government; and
- to ensure a high standard of service to the Minister, to Parliament and to all other persons who have occasion to deal with the Agency.

Program Description: In carrying out Investment Canada's new positive mandate to encourage and facilitate new business investment, it is anticipated that the new Agency would work with Canadian posts abroad and industrial regional offices across Canada and would operate in concert with provincial governments and the private sector. Through this network it would serve as the focal point for the Government's effort to identify investment opportunities, to transfer technology and to put Canadian businesses in need of capital in touch with investors seeking opportunities to invest in Canada. It is also anticipated that it would offer information and other investment services and provide tools to assist others to promote Canadian investment interests at home and abroad.

As regards the review process envisioned in Bill C-15, it is estimated that only about 10% by number and two-thirds by asset size of the investments by non-Canadians that are currently reviewable under the Foreign Investment Review Act would be reviewable under the Investment Canada Act. All other non-Canadian investors would be required only to notify the Government of their investment intentions.

3. Comparison of the FIR Act and the Investment Canada Bill

A comparison of the key features of the existing Foreign Investment Review Act and the current proposals outlined in Bill C-15 is described in Figure 2.

Figure 2: Comparison of FIR Act and Investment Canada Bill

Key Features	Existing FIR Act	Investment Canada Bill
Purpose	Level of foreign control a matter of national concern	Investment by Canadians and non-Canadians presumed to be of benefit to Canada
Scope of Review		
. New Businesses	All	Not reviewed
. Direct Acquisitions	All	Reviewed if $5M or more
. Indirect Acquisitions	All	Reviewed if $50M or more, or $5M or more if Canadian subsidiary is more than 50% of total transaction
Scope of Notification	No separate provision as all investment reviewed	All new businesses and acquisitions below thresholds indicated above
Reserve Power to Review	None required	Any investment regardless of size in prescribed culturally sensitive sectors
Benefit Test	Significant benefit to Canada	Net benefit to Canada
Assessment Factors	Impact on: . economic activity . Canadian participation . efficiency and technology . competition . compatibility with federal and provincial economic and industrial policies	Impact on: . economic activity . Canadian participation . efficiency and technology . competition . compatibility with federal and provincial economic and industrial policies . compatibility with cultural policy . international competitiveness
Review Process		
. Consultation with	. Provinces affected . Departments affected	. Provinces affected . Departments affected
. Cabinet	In sensitive cases	In sensitive cases
. Decision by	Governor in Council	Minister
. Time frame	60 days with unlimited extension by Government	45 days with extension beyond 75 days only with agreement of investor
Definition of Foreign Investor	Complex rules based on control-in-fact with presumptions biased against investor. No incentive for investors to Canadianize.	Simpler rules which take account of extent of Canadian ownership and employing more balanced presumptions. Modest incentive for investors to Canadianize.
Penalties	Criminal penalties	Civil penalties except for breach of confidentiality
Positive Role	None	Specific mandate to: . encourage investment for growth . provide information services . advise on opportunities and contacts

D. Summary of FIRA Operations

1. Legal Mandate

The Foreign Investment Review Act, which came into force in 1974, was enacted by Parliament to provide a mechanism to screen certain foreign direct investment proposals to determine whether or not these investments are likely to be of significant benefit to Canada. The Act applies to two, and only two, forms of foreign investments:

- the acquisition of control of a Canadian business enterprise by foreign individuals, corporations, governments, or groups containing foreign members, through the acquisition of shares or of the property used in carrying on the business; and
- the establishment of a new business in Canada either by foreign persons who do not already have an existing business in Canada, or by foreign persons who have an existing business in Canada, if the new business or expansion is unrelated to the existing business.

Section 7(1) of the FIR Act provides for the establishment of an agency, the Foreign Investment Review Agency, to advise and assist the Minister responsible for the administration of the Act. The responsible Minister is the Minister of Regional Industrial Expansion.

2. Program Objective

The objective of the Program is "to ensure that acquisitions of control of Canadian business enterprises and the establishment of new or unrelated businesses by non-Canadians are, or are likely to be, of significant benefit to Canada".

3. Program Description

The Program provides for the assessment of proposals by non-Canadians regarding acquisition of control of Canadian business enterprises; the establishment of new businesses and expansion into unrelated businesses in Canada; negotiation of undertakings and the co-ordination and development with provincial governments and other federal departments of recommendations as to whether such proposals provide significant benefits to Canada; the provision of legal and administrative support to assist the assessment process; preparation of ministerial rulings as required by the statute; the performance of monitoring, investigatory and enforcement measures to ensure compliance with the legislation; and the provision of research and analytical support needed to administer the statute.

When a notice outlining an investment proposal is received by the Agency, it is examined and evaluated on the assessment factors outlined in the Act. The notice is also c[illegible]ated to the province or provinces significantly affected by

the proposal for their views and comments. Once all the necessary information has been assembled, the case is then referred to the Minister, together with an assessment by the Agency of the perceived effects of the investment. The Minister then decides whether or not to recommend to the Governor in Council that the investment be allowed and the applicant is informed accordingly. Following allowance or disallowance, the Agency monitors whether or not foreign investors are acting in a way which is consistent with the provisions of the FIR Act.

4. Program Organization for Delivery

Activity Structure: The current FIRA Program consists of one activity, Administration, which is broken down into five sub-activities: determining whether or not proposed foreign investments are reviewable or non-reviewable under the FIR Act; assessing whether or not reviewable investment proposals are or are not likely to be of significant benefit to Canada; monitoring compliance with the FIR Act; policy development and research; and administration.

Figure 3: Activity Structure

Organization Structure: The Foreign Investment Review Agency is located entirely in Ottawa. It is headed by a chief executive officer (Commissioner) who is appointed by the Governor in Council and is responsible to the Minister for the work of the Agency. The Agency has four operational units: Compliance Branch; Assessment Bureau; the Policy, Research and Communications Branch; and the Personnel and Administration Division.

5. Program Effectiveness

The Foreign Investment Review Agency is concerned mainly with its effectiveness in dealing with foreign investors, the quality of advice it provides to the Minister on investment proposals and its efficiency in dealing with foreign investment applications. Each investment proposal allowed by the government is expected

to yield significant benefit in terms of the industrial and economic development of Canada. Investment proposals which are not likely to be beneficial are refused. The Agency does not attempt to measure the differences in economic development that occur by virtue of the review process compared to the effects, if any, that would occur in the absence of the FIR Act and related process.

Planned new investment and employment are the only readily quantifiable benefits associated with foreign investment proposals under the Act. Though great care must be taken in using or interpreting these figures - one large case during a year can distort the figures - they do provide some measure of the benefits likely to result from allowance under the Act. Figures 4 and 5 provide a detailed breakdown of planned investment and employment benefits resulting from allowed cases for the fiscal years 1981-82, 1982-83 and 1983-84.

Figure 4: Comparison of Planned Investment Resulting from Allowed Cases ($ million)

	Actual 1983-84	Actual 1982-83	Actual 1981-82
Administration	1,737.6	1,514.5	704.9
New businesses	2,395.9	1,531.7	904.9
Total	4,133.5	3,046.2	1,609.8

Figure 5: Comparison of Planned Employment Resulting from Allowed Cases (number of jobs) for 1981-82, 1982-83, and 1983-84

	1983-84			1982-83			1981-82		
	Jobs Saved	New Jobs	Total Jobs	Jobs Saved	New Jobs	Total Jobs	Jobs Saved	New Jobs	Total Jobs
Acquisitions	1,927	10,234	12,161	5,670	7,822	13,492	3,521	9,284	12,805
New businesses	-	11,928	11,928	-	17,723	17,723	-	6,620	6,620
	1,927	22,162	24,089	5,670	25,545	31,215	3,521	15,904	19,425

Fiscal year 1982-83 was a record year for new investment and employment benefits with planned new investment up 89 percent and saved or planned jobs up 61 percent. In 1983-84 planned new investment continued to increase; it rose over 35 percent to $4.1 billion. Both acquisitions and especially new business proposals contributed to the increase; planned new investment rose over 14 percent in the former and 56 percent in the latter. Though the total number of jobs planned and saved reached 24,089, it was, nonetheless, 23 percent less than the record 31,215 jobs recorded in 1982-83. There was, however, a 31 percent increase in the number of new jobs planned in acquisition cases.

Further details of operations under the Act are contained in the Agency's Annual Report which was tabled in Parliament in November 1984.

6. Performance Information/Resource Justification

Following the introduction in mid 1982 of changes streamlining the review process, a large number of cases which were in the Agency became eligible for review as small business proposals. This, together with a concentrated effort made to resolve outstanding cases, resulted in a higher than usual number of cases being decided by the Governor in Council during the 1982-83 fiscal year. In 1983-84 the number of applications resolved, while 9.3% below that of 1982-83, was nevertheless 25.5% above the 1981-82 level. It is forecast that a further rise of 5.8% is likely to occur in 1984-85.

Over 80% of all reviewable investments are now being processed through to a final decision in less than 60 days. Many are decided in about half that amount of time. By contrast, only 55% of all investments reviewed in the year prior to the introduction of the new measures were dealt with in less than 60 days.

Figure 6 provides information on the actual and projected status of all applications by fiscal year.

Figure 6: Status of Applications

	Forecast 1984-85	Actual 1983-84	Actual 1982-83	Actual 1981-82
Applications carried forward	193	223	426	456
Applications received	1,000	1,010	943	799
Total applications	1,193	1,233	1,369	1,255
Governor-in-council decisions (G.I.C.)	975	885	984	594
Applications withdrawn prior to G.I.C. dec.	66	76	95	125
Certified applications resolved	1,041	961	1,079	719

Note: The person-year column displays the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

The 1985-86 Estimates include only authorities to be voted and statutory items. The cost of accommodation provided free of charge by Public Works ($726,374) and services provided without charge by other departments ($127,000) make up the total cost of the Program.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Grain Transportation Agency

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $2,820,000 in 1985-86 in support of the Grain Transportation Agency Administrator Program. The remaining expenditures, estimated at $193,000 for pensions and other employee benefits, will be made under existing statutory authority.

1811

Section I
Program Overview

A. Highlights

The Grain Transportation Agency is a newly created organization under the Western Grain Transportation Act (WGTA). The Agency takes over functions related to the movement of grain to export and domestic positions that were previously performed by the Grain Transportation Authority, a temporary body established in late 1979 (see page 8). The new Agency is headed by an Administrator, a position created by the WGTA.

Highlights of the Grain Transportation Agency's plans for its operations during 1985-86 are:

- the Agency will pursue its objectives with a budget of $3 million and a staff of 34 persons (see page 7);

- during 1985 the Minister will initiate a thorough review of the WGTA legislation; the Agency will have a major input to the review process with respect to those sections of the Act which relate to performance objectives (see page 13);

- key areas of emphasis to be undertaken by the Agency, some of which began in 1984-85 but will carry through the 1985-86 fiscal year, include (see pages 14 and 15):

  - preparation of a set of recommendations on the legal basis for car allocation functions;
  - development of car allocation procedures for specialty crops;
  - preparation and execution of operating agreements with the railways on government-owned hopper cars and development of procedures for monitoring their use;
  - identification of lists of potential projects to improve efficiency in the grain handling and transportation system and, where possible, commencement of work on study and/or implementation;
  - development of a notional system of performance objectives with awards and sanctions as specified in the WGTA;
  - preparation of a complete report on the performance objective system, and on such other matters under the Agency's jurisdiction as may be required, for the 1985 Review.

B. Financial Summary

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Grain Transportation Agency Administrator	3,013	2,220	793
Authorized person-years	34	26	8

* There is no change from 1984-85 Supplementary Estimates. The Agency was designated a department effective July 1, 1984 and funding for the nine-month period to March 31, 1985 was requested in 1984-85 Supplementary Estimates. The first quarter of that fiscal year was funded by Transport Canada Surface Administration and the Canadian Transport Commission.

Explanation of Change: The financial requirements for 1985-86 are $.8 million or 36% higher than the 1984-85 forecast expenditures. The increase is due primarily to:

	($000)
• 12 months of operation rather than 9 as in 1984-85	600
• contributions to employee benefit plans not required for 1984-85	193
• accommodation charges paid by Public Works in 1984-85	120
• decreased capital requirements	(130)

The change in person-years is the result of 12 months of operation in 1985-86 compared to 9 the previous year. The authorized person-years for 1984-85 are therefore 75% of a full year.

C. Background

1. Introduction

The Grain Transportation Agency (GTA) was created with the passage of the Western Grain Transportation Act (WGTA) in November, 1983. The Agency supercedes the Grain Transportation Authority, which was established in 1979.

The Grain Transportation Agency is charged with the development, co-ordination and management of specific aspects of the grain handling and transportation system.

The Agency, under the direction of the Administrator, is responsible for promoting transportation system efficiencies, monitoring railway performance relative to grain, allocating grain cars in co-operation with the Canadian Wheat Board and the Canadian Grain Commission, and generally co-ordinating the handling and transportation of grain.

The first full year of operation for the new Agency will be 1985-86.

2. Legal Mandate

The Western Grain Transportation Act contains provisions for the establishment of a Grain Transportation Agency Administrator and sets out the powers of the Administrator. The legal mandate thus provided by the Act became effective March 1, 1984 with the appointment of the GTA's first Administrator.

Specific authority for the GTA's car allocation activities is derived from the Canada Grain Act.

3. Program Objective

The objective of the Program is to ensure that, for specified aspects of the grain handling and transportation system, western grain moves to domestic and export positions in a prompt, efficient and orderly manner.

4. Program Description

The Grain Transportation Agency is responsible for the development, co-ordination and management of specific aspects of the grain handling and transportation system which includes: the primary elevator system; railway transportation; the terminal elevator system; and the transfer elevator system of the St. Lawrence River and the Maritimes. The responsibilities of the Canadian Grain Commission respecting the handling of grain in elevators and of the Canadian Wheat Board respecting the purchasing and selling of grain are, however, not restricted by the duties and functions of the GTA. Specific responsibilities of the GTA include:

Car Allocation: Car allocation has been a primary responsibility of the GTA since March, 1980. It involves the weekly determination of the number of railway grain cars required and available to move western grains to export and domestic destinations, and the subsequent division of those cars by destination, grain, shipper, shipping block or train run, and delivery point. Although there is a shared responsibility for allocation with other agencies, the GTA is designated with primary responsibility for determining on a weekly basis the need for railway cars to meet sales, determining in weekly negotiation with the railways, the number of cars available, reconciling, in the negotiation process, any differences between car requirements and car availability, and finally allocating cars between Canadian Wheat Board and non-Board grains and among shippers of non-Board grains. Grain cars available for allocation including both boxcars and government and railway owned hoppers total approximately 30,000. The weekly allocation process is illustrated on page 18.

Co-ordination: The GTA has a responsibility for overall co-ordination of grain movement, working with the railways, the elevator companies, the marketing organizations and the other regulatory agencies to ensure that grain movement occurs in an orderly way. This overall co-ordination involves identifying potential bottlenecks and working in a facilitating, expediting, and mediating role with system participants to ensure resolution of difficulties which could impede grain movement.

In addition to the general co-ordination, the Agency also has specific co-ordinating responsibilities at Vancouver and Thunder Bay. GTA offices in these port locations work with railways, terminal elevator managers, and port authorities to expedite grain movement through these very congested locations. These offices will be required to take greater responsibility in the marine interface as well.

Efficiency Measures: With producer objectives in mind, the GTA has the responsibility to identify, assess, promote and, if possible, implement measures to improve the efficiency of the grain handling and transportation system. Areas for further study will include branch line and elevator configuration, truck versus rail operations, and rail car management techniques. Options will be analyzed; proposals will be developed; the adoption of feasible measures will be promoted; and accepted proposals will be implemented.

Performance Objectives: The GTA is required to develop and implement procedures for setting performance targets for the railways and other system participants including elevator companies and marketing organizations. Means will be developed for measuring performance against the targets, and systems of awards and sanctions will be developed to reward or penalize participants for their success or failure in meeting targets assigned to them. Until the end of the 1985-86 crop year the systems will be notional; that is, they will be applied in theory only, to determine what is workable. If a practical system can be developed, it will come into force following Parliamentary approval. The GTA would then monitor and administer the system on an on-going basis.

Transportation Administration: The Administrator is responsible for a number of transportation administration tasks, such as:

- railway operating agreements - to review and renegotiate agreements for existing and new cars;
- grain car purchases - to prepare agreements and study purchase requirements;
- alternative use of grain fleet - to monitor capacity and develop regulations regarding use of the grain fleet for other purposes;
- reciprocal and interchange agreements - to assess the need for and negotiate agreements in conjunction with the railways;
- government hopper cars - to monitor and administer use of cars to ensure they are used efficiently and in accordance with operating agreements; also, to determine policies and procedures for alternative uses;
- trucking agreements - to negotiate and administer agreements for the movement of grain by motor vehicle; and
- investment plans - to review railway investment plans relative to grain and advise the Minister and the Canadian Transport Commission as to their adequacy with respect to system requirements.

Secretariat Function: Because of the inter-relationships between the GTA and the Senior Grain Transportation Committee (SGTC, see page 11) on matters affecting the transportation, handling and shipment of grain, the Agency, at the Committee's request, acts as Secretariat to the SGTC. In addition to providing administrative support, GTA staff provide technical research on such issues as efficiency, performance objectives, car allocation, etc.

Due to the developmental nature of many of the GTA responsibilities, the requirement for system planning and development is increased. As well, staff efforts to analyze industry data, develop information systems, and distribute information throughout the industry are being expanded.

Overall, the GTA endeavours to secure the co-operation and participation of all segments of the transportation and handling industry. Contact and liaison are maintained at senior levels. Co-ordination is achieved through the monitoring of key operating indicators, followed by appropriate action.

A significant public information function is carried out through reports to the industry, to producers and to the general public on grain handling and transportation issues and performance.

5. Program Organization for Delivery

Activity Structure: The Grain Transportation Agency has one Activity which is synonymous with the Program.

Organization Structure: The Grain Transportation Agency reports to Parliament through the Minister of Transport.

The Grain Transportation Agency's offices are located in Winnipeg, Thunder Bay and Vancouver. The Administrator is located in the Winnipeg Head Office and is responsible for fulfilling the Program's objective. The Deputy Administrator takes executive responsibility for directing the day-to-day activities of the Agency. The Agency is supported by an Executive Director of Operations with a staff of 13, an Executive Director, Planning, Development and Evaluation with a staff of 9, and a Director, Finance and Administration with a staff of 4. These officers are responsible for the functions displayed in Figure 2. The offices in Thunder Bay and Vancouver deal with Port Co-ordination and are part of the Operations structure.

A Senior Grain Transportation Committee (SGTC) was established under the WGTA to advise the Minister and the Administrator on any matter affecting the transportation, handling and shipping of grain including performance objectives, measures to improve capacity and efficiency, and allocation of railway cars for grain movement. The Committee is made up of senior representatives from all facets of the grain trade.

Figure 2: Organization Structure and Functions

Executive Director, Operations	Executive Director, Planning, Development and Evaluation	Director, Finance and Administration

D. Planning Perspective

1. Environment

The Agency operates in an extremely sensitive environment. It occupies a central role in the grain industry, and the Administrator and Agency staff must respond to a wide variety of forces within the industry. Among those are:

Production and Marketing Levels: Production of the six principal crops (wheat, barley, oats, canola, rye, and flaxseed) is currently running in the 42 million tonne (m.t.) range. Grain movement is generally in the 32 m.t. range. This movement is comprised of the six major grains and one to two m.t. of "minor statutory" grains (e.g., corn, buckwheat, sunflower, etc.). In any given year, the actual production and movement can vary, plus or minus, up to five m.t. from these figures depending on production and marketing experiences, which in turn are influenced most heavily by weather and worldwide supply and demand. Continued growth can be expected to take production up to about 46 to 47 m.t., and movement to 35 to 36 m.t. by the end of the decade.

Commercial Forces: The Agency is privy to confidential grain sales information from both the Canadian Wheat Board and private grain interests. Commercial confidentiality is a much more critical issue in the grain industry, where prices can change on an hourly basis, than in other industries.

Industry Structure: The Canadian grain industry is unique in its amalgam of private and public marketing organizations, private entrepreneurs and co-operatives in the grain handling sector, and free market and regulatory situations in marketing, handling and transportation. The Agency's role is at the centre of this very mixed industry.

Socio-political Environment: Grain industry organizations such as the Canadian Wheat Board, the Canadian Grain Commission, elevator companies and a myriad of producer groups are the expression of deeply held political and social beliefs of western Canada's farmers. The farm community, and the management and directing boards of these organizations often hold divergent views: left vs. right; private vs. co-operative; state vs. open marketing methods. The Agency's role requires it to balance these different perspectives and to play a neutral role in implementing the policies of the WGTA.

Economic Climate (Domestic and International): The Agency is affected by events in the economic scene, both domestically and internationally. Interest rates, world trade, supply of and demand for grains and foodstuffs all effect the movement of western Canadian grain, and as a result, the Agency responsibilities.

2. Initiatives

In 1985-86 the GTA will pursue a number of significant initiatives including: car allocation for specialty crops; preparation and execution of grain car operation

agreements; efficiency measures; monitoring use of government hopper cars; and participation in the 1985 review process of the WGTA.

The comprehensive review, to be carried out by the Minister in consultation with such system participants and other persons as deemed appropriate, will review the operation of the Act and its effects on the transportation, shipping and handling of grain. This is to include an evaluation of the advisability of implementing a system of awards and sactions for any system participants by regulations under Section 21.

These initiatives, which are each described elsewhere in the document, are a result of the expanded mandate provided under the WGTA. They reflect the developmental emphasis of the GTA in its first few years of operation.

3. Program Effectiveness

There are a number of key indicators in the areas of promptness, efficiency and orderliness that will help in measuring program effectiveness on an ongoing basis.

Promptness: The Agency's role in ensuring that grain movement is prompt will lie in the performance objectives system. The "targets" or "objectives" which are expected to be established by the Agency will reflect the need to put grain in position to meet sales commitments.

The Agency will publish the "targets" in advance of requirements. The measure of success will be the degree to which each system participant's "target" is met.

Efficiency: The GTA has a legislated responsibility to improve efficiency in the grain handling and transportation system. This will generally be approached on a project-by-project basis; certain broad efficiency objectives, however, will also be defined.

The measurement of sucess in achieving this objective will be the documentation of dollar savings and/or measurable performance improvement related to specific projects. In addition, certain key indicators are monitored on an ongoing basis. Two of these are car cycles, and number of days that stocks remain in store. Both are sensitive to everyday operating conditions and the impact of a particular efficiency initiative would require specific measurement.

Orderliness: The process of car allocation entails not only the allocative aspect of ensuring fair and equitable access to transportation but also a logistical aspect ensuring that the right grain moves to the right place at the right time. While clearly related to "promptness", it is also important to ensure that the grain moves in an orderly fashion as well. Every allocation decision is also, inseparably, a logistical decision as well.

Certain key indicators, which are measured on an ongoing basis, indicate the degree to which orderly movement is being achieved. The three most important indicators are stocks in store by specific grain type, number of loaded grain cars, and lead time to vessels.

4. Performance Information/Resource Justification

Operations: As depicted in Figure 2 there are a number of functions involved within the Operations sphere. Chief among those, in terms of plans and resources for 1985-86, are the following:

Car Allocation: The GTA continually reviews its railway car allocation procedures for all grains to improve the ability to match car arrivals with vessels, to control stock levels, and to ensure that cars are allocated to all users on an impartial basis. The two performance indicators therefore are the degree to which access is fair and equitable, and the level of co-ordination. Feedback from system participants would be forthcoming if allocations were less than impartial, and allocation audits provide assurance of week to week consistency and accuracy.

In addition, there is an ongoing effort to identify problems in various sectors of the industry that could impact on car allocation decisions. Car allocation staff, with the assistance of Planning and Evaluation, will review the car allocation process for specialty crops for which the WGTA extends new statutory rates. Also, a set of recommendations on the legal basis for car allocation functions will be prepared. Resource requirements for all car allocation functions are three person-years.

Co-ordination: The general co-ordination function of the GTA requires constant monitoring of and liaison with system participants at all levels. The objective is to maintain good relationships and prevent problems from occurring. The Port Co-ordination function has been in place for 10 years under the CTC. During 1985-86 the integration of the Port Co-ordination offices at Thunder Bay and Vancouver will be completed, including a rationalization of the management (data) information linkages and services. The role of these offices in marine co-ordination will be defined and implemented. Eight person-years are involved in Port Co-ordination responsibilities.

Hopper Car Control: In order to have the government-owned hopper car fleet under the effective control of the GTA, first, ownership of the cars will be transferred to the GTA as provided for under the WGTA, and then, formal operating agreements with the railways to cover all cars will be negotiated. The preparation, negotiation and execution of the agreements will involve two person-years.

The GTA is also responsible for informing Canadian grain producers, grain handling and transportation industry and agricultural organizations on provisions, implications and applications of the WGTA through news releases, reports, brochures, etc.

Planning, Development and Evaluation: This group is responsible for planning much of the newly mandated workload of the Agency. This includes development of information systems, efficiency measures, and a plan for performance objectives as described below together with participating in evaluations and modifications of operational functions.

Efficiency Measures: The Agency will develop measures to improve efficiency in the industry and, in co-operation with the Senior Grain Transportation Committee, act to see that such measures are thoroughly studied and, where feasible, implemented. The Agency has a long-term objective to reduce the annual operating costs of the overall transportation and handling system by $100 million. It is expected that savings through reduced car cycles, specific changes in system configuration, and savings in government programs (e.g., branch-line subsidies) will be obtained at an average rate of $20 million per annum. Resource requirements are three person-years and $250,000 for contract work.

Information Systems: Management information systems will be developed to further enable the Agency and other system participants to utilize compatible statistical and data processing systems for use in meeting their planning, operational and evaluating requirements. These development responsibilities will require four person-years.

Performance Objectives: The Agency will develop and implement a plan of performance objectives and a notional scheme of sanctions and awards pursuant to these performance objectives, as specified under Section 18 of the WGTA. Resource requirements will be three person-years and $100,000 for contract work.

Secretariat to the Senior Grain Transportation Committee: The GTA provides research support to the Senior Grain Transportation Committee. GTA staff also provide public information support by drafting the four public reports that are required under the WGTA. Resources wil be drawn from other areas as required.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 3: Expenditures by Object ($000)

	Estimates 1985-86	Forecast* 1984-85
Personnel		
Salaries and wages	1,382	1,000
Other personnel costs	15	
Contributions to employee benefit plans	193	
	1,590	1,000
Goods and services		
Transportation and communications	321	233
Information	170	104
Professional and special services	539	419
Rentals	175	131
Purchased repair and upkeep	15	31
Utilities, materials and supplies	110	83
All other expenditures	5	4
	1,335	1,005
Total operating	2,925	2,005
Capital	85	215
Transfer payments	3	
Total expenditures	3,013	2,220

* The Agency was designated a department effective July 1, 1984 and funding for the nine-month period to March 31, 1985 was requested in 1984-85 Supplementary Estimates. The first quarter of that fiscal year was funded by Transport Canada Surface Administration and the Canadian Transport Commission.

2. Personnel Expenditures

Figure 4 displays the number of person-years and average salary of each category of employees.

Figure 4: Authorized Person-Years and Salary Provision

	Authorized Person-Years		Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85*		
Administrator	1	1		
Management	4	3	50,350 - 96,300	62,728
Scientific and Professional	5	4	13,609 - 88,120	46,503
Administrative and Foreign Service	12	9	12,766 - 66,252	41,726
Administrative Support	12	9	12,636 - 37,130	22,104

* The Agency was designated a department effective July 1, 1984 and person-years for the nine-month period to March 31, 1985 were requested in 1984-85 Supplementary Estimates. The authorized person-years for 1984-85 are therefore 75% of a full year.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Health and Welfare Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are nine chapters in this document. The first provides an introduction to the Department. The other eight present the Expenditure Plans for the Department's programs.

Each chapter begins with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents.

Each Program Expenditure Plan is divided into three sections. Each provides increasing levels of detail. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analysis that the reader may require to understand the program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program. Within each Program Expenditure Plan, a schedule of Financial Requirements provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Health Protection Program	5-1
Income Security Program	6-1
Fitness & Amateur Sport Program	7-1
XV Olympic Winter Games Program	8-1
Departmental Administration Program	9-1

Departmental Summary

Role and Responsibilities

The Department of National Health and Welfare is responsible for matters related to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Parliament of Canada has jurisdiction. These responsibilities include but are not limited to administration of legislation relating to the health, social security, and welfare of the people of Canada; investigation and research into public health and welfare; supervision of health facilities on all forms of transportation; information services relating to health conditions and practices; health services for federal government employees, immigrants, civil aviation personnel, seamen, Indian and Inuit peoples, and residents of the Yukon and Northwest Territories; public health matters affecting boundary waters and other cross-jurisdictional health questions with the United States; cooperation and coordination with provincial governments on matters of health, social security and welfare; and collection, publication and distribution of information relating to public health.

Additional responsibilities for specific health and welfare matters have been assigned to the Department through other acts, regulations, and orders. These authorities are outlined in each Program Expenditure Plan which follows.

A significant amount of departmental activity involves collaboration with provincial and territorial authorities in efforts to preserve and improve the health and social well-being of all Canadians. The need for joint activity in certain areas arises from the constitutional division of responsibilities and the existence of federal programs which assist provinces and territories to maintain their own health and social service programs.

Departmental responsibilities focus on the following objective areas: income security for individuals and families; essential social services, particularly for socially and economically disadvantaged Canadians; universal access for all Canadians to quality health services; protection against disease and environmental hazards; promotion of healthy lifestyles; excellence in amateur sport; and support of the planning and staging of the XV Olympic Winter Games.

The major strategies through which the Department carries out its responsibilities are: transfers to individuals, transfers to provincial and territorial governments, regulation and surveillance, research, direct service to specific groups, advice, consultation, information and promotion.

Program Structure

Two changes have taken place in the program structure of the department. The Health and Social Services program has been divided into two programs - the Health Services and Promotion Program and the Social Services Program. The other change is to establish the XV Olympic Winter Games as a distinct program rather than as a part of the Departmental Administration Program. These changes have been made to better reflect the manner in which the programs are managed.

The Department of National Health and Welfare is now composed of eight programs:

- Health Services and Promotion;
- Social Services;
- Medical Services;
- Health Protection;
- Income Security;
- Fitness and Amateur Sport;
- XV Olympic Winter Games;
- Departmental Administration.

Seven of the eight programs correspond to distinct branches within the department: Health Services and Promotion, Social Services Programs, Medical Services, Health Protection, Income Security Programs, Fitness and Amateur Sport and Government of Canada Office for the 1988 Olympic Winter Games. The Departmental Administration Programs consists of three Branches, each headed by an Assistant Deputy Minister.

The Program and Organization structures are outlined in the following diagram:

Figure 1: Program and Organization Structures

*The Minister of State for Fitness and Amateur Sport is responsible for assisting the Minister of National Health and Welfare in relation to the Fitness and Amateur Sport Program and federal participation in preparations for the 1988 Olympic Winter Games in Calgary.

Program Descriptions

Health Services and Promotion: This program provides financial and technical support to the provinces and territories for insured health care services and certain extended health care services. The program also promotes the adoption and maintenance of healthy lifestyles and fosters public health research.

Social Services: This program supports the provision of social assistance and services to persons whose economic circumstances are inadequate to meet their basic needs or whose social circumstances expose them to the risk of poverty, isolation or dependency.

Medical Services: This program provides health services to several client groups. The major activities are directed towards registered Indians and Inuit throughout Canada and all residents of the Yukon and Northwest Territories. A variety of health services are also provided to immigrants and temporary residents, international travellers, federal public servants, civil aviation personnel, the physically handicapped and disaster victims.

Health Protection: This program endeavours to eliminate health hazards associated with the natural and man-made environments that lead to illness and untimely death. Principal activities include: assessment and control of the quality and safety of food and safety and effectiveness of drugs and medical devices; the identification and assessment of environmental hazards; the surveillance of diseases; and the provision of specialized laboratory services.

Income Security: This program is responsible for maintaining and improving the income security of the people of Canada. It administers three major income security programs: the Canada Pension Plan, Old Age Security and Family Allowances.

Fitness and Amateur Sport: This program contributes to the increased fitness of Canadians and the promotion of excellence in domestic and international amateur sport by Canadians.

XV Olympic Winter Games: This program contributes to the successful planning and staging of XV Olympic Winter Games by providing direct funding, participation on various Boards and coordination of all federal services.

Departmental Administration: This program provides executive direction and management services to the Department.

Departmental Spending Plan

A summary of the department spending plan is shown below.

Figure 2: Financial Summary by Program ($000)

	Estimates 1985-86	Forecast 1984-85	Change $	%
Health Services and Promotion	6,580,073	6,155,937	394,136	6.2
Social Services	4,043,664	3,776,796	266,868	7.1
Medical Services	390,233	382,839	7,394	1.9
Health Protection	115,583	114,351	1,232	1.1
Income Security	15,087,110	13,919,377	1,167,733	8.4
Fitness and Amateur Sport	62,436	105,001	(42,565)	(40.5)
XV Olympic Winter Games	49,891	45,908	3,983	8.7
Departmental Administration	44,156	43,790	366	0.8
Total budgetary	26,333,146	24,543,999	1,789,147	7.3

Statutory expenditures represent 96.7% of total departmental expenditures.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $48,598,000 for operating expenditures and grants and contributions to operate the Health Services and Promotion Program during the 1985-86 fiscal year. Statutory authority exists for the Program's expenditures on Health Care payments, which are estimated at $6,490,000,000 for 1985-86. Additionally, contributions to employee benefit plans of $1,475,000 will be made under existing statutory authority.

Financial Requirements by Authority

Vote (thousand of dollars)		1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

Over the next year Branch activities will be directed in the following areas (see page 2-14):

- Implementation and administration of the Canada Health Act including development of regulations.
- Advancement of National Health Research and Development Program (NHRDP) including targetting research to priority needs.
- Assistance to the provinces and territories in improving, enhancing and modifying their health care delivery services.
- Strengthening the thrust in health promotion and disease prevention as a means to moderate growing use of the health system.
- Developing a national blood policy in concert with interested provincial and national governmental and non-governmental bodies.
- Implementation of a Management Information System to improve program management.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

Activity	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Operating Costs				
Health Insurance	768	1,137	(369)	2-17
Health Services and Resources	6,519	6,338	181	2-22
Extramural Research	1,132	1,045	87	2-28
Health Promotion	12,249	12,158	91	2-32
Program Administration	2,680	2,782	(102)	2-39
	23,348	23,460	(112)	
Grants and Contributions				
Health Services and Resources	3,176	5,746	(2,570)	2-22
Extramural Research	19,309	18,077	1,232	2-28
Health Promotion	4,240	3,654	586	2-32
	26,725	27,477	(752)	
Statutory Payments				
Health Insurance	6,090,000	6,195,000*	105,000	2-17
	6,140,073	6,255,937	104,136	
Authorized Person-Years	276	286	(10)	

* Forecast expenditures for 1984-85 include prior years' adjustments, and deductions for extra-billing and user charges as provided for under the Canada Health Act.

The increase in the 1985-86 requirements over the 1984-85 forecast is made up of the following major items:

	($000)
• Operating Costs	
- Net decrease as a result of 1984-85 approved resources for the implementation of the Canada Health Act, which are not included in our 1985-86 requirements and restrain measures - partially offset by approved workload increases	(112)
• Grants and Contributions	
- Net decrease due to the deletion of items not required in 1985-86 and the elimination of a grant program - partially offset with increases in other programs	(752)
• Statutory Payments	
- Increases in Health Care payments as a result of formula adjustments	385,000
• Person-Years	
- Net reduction of 10 person-years due mainly to resources approved in 1984-85 for the implementation of the Canada Health Act which are not included in 1985-86 requirements.	

Figure 2: Gross Expenditures by Expense Category

B. Recent Performance

1. Highlights

- The program coordinated the preparation of the Canada Health Act legislation for the review and approval of the Minister and Cabinet Committees. Technical support was also provided to the Minister during its legislative review.

- Program thrusts in lifestyle improvement continued through its activities in smoking: Generation of Non-Smokers, and Time to Quit; alcohol: Dialogue on Drinking and National Training System; and Nutrition: Nutrition for Children, Nutrition Recommendation for Health Professionals and Industry, Canada's Food Guide Tear Sheet and Canada's Food Guide Handbook.

- The Secretariat of the Canadian Blood Committee became a component of the program.

- Health Services Productivity Improvement Program continued, the funding capabilities of the Grants to National Voluntary Health Organizations were expanded and involvement in human organ procurement and exchange (H.O.P.E. conference) became more active.

2. Review of Financial Performance

Figure 3: 1983-84 Financial Performance ($000)

	1983-84		
Activity	Actual	Main Estimates	Change
Operating Costs			
Health Insurance	1,644	719	925
Health Services and Resources	5,701	6,275	(574)
Extramural Research	949	1,021	(72)
Health Promotion	11,113	12,339	(1,226)
Program Administration	2,457	2,853	(396)
	21,864	23,207	(1,343)
Grants and Contributions			
Health Insurance	233	-	233
Health Services and Resources	3,977	1,591	2,386
Extramural Research	16,044	16,044	-
Health Promotion	3,944	4,240	(296)
	24,198	21,875	2,323
Statutory Payments			
Health Insurance	5,563,689	4,788,300	775,389
	5,609,751	4,833,382	776,369
Person-Years	279	290	(11)

The increase in 1983-84 actual expenditures over the 1983-84 Main Estimates is made up of the following major items:

	($000)
• **Operating Costs**	
- Additional resources required for the implementation of the Canada Health Act	1,068
- Lapses as a result of restraint measures and managerial efficiencies	(2,411)
• **Grants and Contributions**	
- Additional resources required for various grants and contributions programs	3,535
- Lapses as a result of restraint measures	(1,212)
• **Statutory Payments**	
- Increases in Health Care payments as a result of formula adjustments	775,389
• **Person-Years**	
- Lapse of 11 person-years as a result of restraint measures	

C. Background

1. Introduction

The Health Services and Promotion Program contributes to the achievement of two departmental objective areas: equity of access to adequate health care; and the promotion of healthy lifestyles.

Through its varied activities, the Program has established effective inter-relationships with the provinces and providers of health care services. Statutory payment mechanisms and cost-sharing arrangements require a co-operative environment with the provinces and territories. Important links are also maintained with other branches of Health and Welfare; with other federal departments; with professional and voluntary organizations at the national and international levels; and with the voluntary/private sector.

2. Legal Mandate

The mandate for the program is derived from the National Health and Welfare Act which governs all matters relating to the promotion and preservation of the health of the Canadian people. Administration of the following legislation and authorities is the responsibility of the program:

- Canada Health Act
- Federal-Provincial Fiscal Arrangements and Federal Post Secondary Education and Health Contributions Act 1977.

3. Program Objective

The objective of the Health Services and Promotion Program is to develop, promote and support measures designed to preserve and improve the health and well-being of Canadians. Within this broad objective, activities are designed to:

- Improve the quality, accessibility, delivery, and cost-effectiveness of community health, mental health, institutional and professional services and facilities.
- Ensure that all residents of Canada have reasonable access to insured hospital and medical care services on a pre-paid basis by assisting all provinces and territories to maintain health insurance programs and by assisting in the development of extended health care services.
- Help Canadians achieve healthy lifestyles.
- Support scientific activities relevant to the concerns and objectives of the Department and to provide for the training, placement and maintenance of needed research personnel in the areas of health services and public health.

- Provide overall direction to and coordination of program activities by providing policy advice and direction; planning, financial and administrative services.

4. Program Organization for Delivery

Activity Structure: Figure 4 displays the program's new structure. It now has five activities, increased from three in previous years when the program and Social Service program were combined. The new structure more accurately reflects the program's composition and allows for greater accountability and increased reporting capabilities.

Figure 4: Activity Structure

The Program is structured to provide direct and indirect support to the health services environment. Payments in direct support of the provincial and territorial health programs are administered through the Health Insurance Activity. Financial support for initiatives in the non-governmental sector constitutes the majority of expenditures in the Health Promotion and Extramural Research Activities. Indirect support is extended by all Activities within the program through its consultative, co-ordinative and informational services.

Health Promotion ensures a closer client relationship by maintaining regional operations in Halifax, Montreal, Toronto, Winnipeg and Vancouver. This accounts for 11.6 percent of the program's person-years with the balance required for functions within the National Capital Region.

The following chart displays the program organization structure by Directorate and states their respective resources.

Figure 5: Organization Structure and 1985-86 Resources ($000)

D. Planning Perspective

1. Environment

The following factors have significant implications for the Health Services and Promotion Program.

Demographic Trends: Although the Canadian population is not expected to grow very quickly over the next decade, changes will occur in its composition. The population over 65 years of age will rise to 3 million by 1991. This will represent 11.3 percent of the total population compared with 9.5 percent in 1980. Women will comprise an increased proportion within this population sector. At the same time, the number of people between the ages of 25 and 44 will also increase. Within this group, there will be a substantial rise in the number of mother-led families. These trends are expected to have significant impact on the need and demand for health care, particularly in light of the economic trends discussed below.

Federal-Provincial Relations: The dynamics of the federal-provincial working relationship have a critical influence on the Health Services and Promotion program. Constitutional authority for the provision of health services rests with the provinces. However, economic conditions and trends have significant impact not only at the provincial level, but also at the national and international levels. A comprehensive and co-ordinated response from both federal and provincial governments is therefore required to develop and maintain an adequate level and range of health services throughout Canada. Responsibility for the design and delivery of programs rests with each province, while the federal responsibility includes financial and consultative support. Federal-provincial mechanisms have been developed to enable close collaboration, and their effectiveness relies heavily upon a continued commitment to co-operate in this sector.

2. Initiatives 1985-86

The major initiatives for the Program during 1985-86 will be:

The Canada Health Act, which has been developed after two independent reviews of the program, the Health Services Review 1979 (the Hall Report) and the Parliamentary Task Force on Federal Provincial Fiscal Arrangements in 1981, and discussions and consultations with the provinces, was given Royal Assent on April 17, 1984.

The Act clarifies the program criteria and conditions for contributions and payments to the provinces in respect of insured health services (hospital and physician services) and extended health care services. A major activity for the Health Services and Promotion Program during 1985-86 will be comprised of the implementation of the Canada Health Act and the development of regulations and information systems to support the Act.

Advancement of National Health Research and Development Program (NHRDP) in support of scientific research and the training, placement and maintenance of research personnel. The Program operates on five priority themes:

- organization and delivery of health care;
- illness prevention and health promotion;
- environmental hazards;
- habilitation and rehabilitation; and
- the health of native peoples.

During 1985-86, NHRDP will add a new dimension to research funding by employing targetting (eg. the Elderly) across the five priority themes.

Provincial health care delivery services, their improvement, enhancement and modification is a major Branch activity. In 1985-86, co-operative liaison with provinces will result in the development of national guidelines and standards for health care services and facilities, and the Productivity Improvement Program will result in more cost-effective procedures and programs. National health care delivery is impacted by a national information exchange program consisting of consultation and advisory services; reports, studies and publications; conferences, symposia workshops and seminars, and by the granting of monies to health service organizations.

Health promotion and disease prevention through Branch activities in smoking, nutrition, alcohol and drug abuse to reduce the use of health services. Groups including children and youth, women, the elderly, and the disabled, have been targetted for special attention within these activities. Healthier lifestyles are promoted through informational programs, print materials, community programs and financial support to community groups, health agencies and voluntary organizations.

The Federal/Provincial Canadian Blood Committee in cooperation with the Canadian Red Cross Society will approach elements of the health and health related industries at provincial, national, and international levels, for input into a national blood policy.

Improved program management is a key 1985-86 activity. There is a need for a fully integrated financial and planning information system that is acceptable and manageable for Branch and Departmental purposes. Branch plans for 1985-86 call for full implementation of a Management Information System.

3. Update of Previously Reported Initiatives

- monitoring conditions of funding under the proposed Canada Health Act (for details please see page 2-20)
- promotion of Healthy Lifestyles (for details please see page 2-35)

4. Program Effectiveness

The Health Services and Promotion Program has a major impact on publicly provided services to Canadians. This Program touches all Canadians at one time or another through such activities as hospital and medical insurance, nursing homes, and homes for the aged.

There are however, two major constraints on the development of precise effectiveness measures for the Program. First, its major endeavours involve transfer payments which assist provincial/territorial governments to provide health services. Secondly, the Program represents a part of the much wider health system which includes: other federal initiatives providing health services, support for non-governmental involvement; provincial/territorial and municipal health services and policies other than those directly assisted by this program; and voluntary agencies providing health services in their communities.

Section II
Analysis by Activity

A. Health Insurance

To ensure that all residents of Canada have reasonable access to insured health care services on a pre-paid basis by assisting all provinces and territories to maintain health insurance programs and to develop extended health care services.

Resource Summary

Health Insurance accounts for approximately 99.2 percent of 1985-86 total program expenditures and 4.7 percent of the total person-years.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Costs	768	13	1,137	18	1,644	23
Contributions	6,490,000		6,105,000*		5,563,922	
	6,490,768	13	6,106,137	18	5,565,566	23

* Forecast expenditures for 1984-85 include prior years' adjustments, and deductions for extra-billing and user charges as provided for under the Canada Health Act.

	5,565,566	23	4,789,019	13	776,547	10

Major variances are explained in the program overview (page 2-10)

Description

This activity provides payments to Provinces and Territories in respect of the cost of insured health services, and certain extended health care services as provided under the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977; and monitors compliance of provincial and territorial health care insurance plans in relation to the program criteria and conditions of payment of the Canada Health Act, which received Royal Assent on April 17, 1984.

The insured health services supported by these contributions (consisting of both tax transfers and cash payments) include all medically necessary hospital and physician services, and those surgical-dental services which must be provided in a hospital. The extended health care services payments assist in the development of such services as nursing home intermediate care, adult residential care, the health aspects of home care and certain ambulatory care services.

Federal payments for insured health services are conditional on provincial programs meeting five program criteria (public administration, comprehensiveness, universality, portability, and accessibility), and on provinces meeting three conditions of payment.

The conditions of payment are:

- the provision of such information as the Minister may reasonably require to administer the Act;
- the recognition of federal contributions in public documents relating to the program; and
- that a province will not permit extra-billing and user charges in respect of insured health services (except user charges for certain long-term chronic care patients deemed to be permanent residents of an institution).

Payments for extended health care services are conditional only upon provinces meeting the conditions of payment relating to the provision of information and recognition of federal contributions.

The condition of payment relating to extra-billing and user charges came into effect on July 1, 1984, following the development of an interim regulatory framework in consultation with the provinces. Regulations with respect to the other conditions are presently under development in consultation with the provinces.

Performance Information/Resource Justification

The Minister of National Health and Welfare, under the Canada Health Act, is responsible to Parliament for ensuring that payments are made in respect of provincial health plans that meet national program conditions. This obligation, therefore, requires continued monitoring of the provincial plans, and extensive federal-provincial review and consultation.

Program staff therefore review provincial health legislation, regulations, and administrative procedures, program information and relevant data, including public reports regarding provincial plans. They also disseminate health insurance data and program information, provide secretariat services to federal-provincial advisory committees, sub-committees and working groups and provide expert advice on technical and policy issues.

This activity has the following direct and indirect impacts on the health care system:

- support of provincially administered health insurance plans that meet national program conditions;
- coverage provided for a comprehensive range of medically required insured hospital and medical care services;
- insured benefits made available to all eligible residents of a province on uniform terms and conditions;
- reasonable access provided to insured services without preclusion or impediment, financial or otherwise;
- portability of coverage and benefits;
- administration through a public authority on a non-profit basis;
- response to public requests for advice and information;
- support for the development of extended health care services; and
- collaboration of federal-provincial efforts and exchange of information in health care.

Recent Performance - 1983-84

During 1983-84, the staff responsible for this Activity

- **coordinated the preparation of the legislation in draft format for the review and approval of the Minister and Cabinet Committees;**

- **provided technical support to the Minister during the legislative review of the Act, which was tabled on December 12, 1983, and received Royal Assent on April 17, 1984. This support included the preparation of briefing material and analyses of policy options, as well as the review and analyses of briefs and submissions to the committees of both Houses of Parliament during their review of the bill;**

- **carried out the ongoing tasks related to monitoring and reviewing provincial health insurance programs with respect to the existing legislation; provided secretariat support to federal-provincial advisory committees and working groups; responded to an increased demand for information on health issues (stimulated by the public interest in the new legislation); and provided policy advice and briefs on general health issues to the Minister and Senior Management as required.**

B. Health Services and Resources

Objective

To improve the quality, accessibility, delivery, and cost effectiveness of community health, mental health, and institutional and professional services and facilities.

Resource Summary

Health Services and Resources for approximately 0.2 percent of 1985-86 total program expenditures and 26.4 percent of the total person-years.

Major variances are explained in the program overview (page 2-10)

Description

This activity provides assistance to provincial and federal health care services and national and international health organizations and provides secretariat support to the Canadian Blood Committee. There is a need for national guidelines and standards for institutional, professional, and community services and facilities. Health Services and Resources further assists the provinces in developing a certain degree of uniformity in the quality and quantity of health services and facilities in Canada and in improving the cost-effectiveness of procedures and programs. The development of services in the areas of prevention, intervention and rehabilitation is encouraged to reduce disability and prevent untimely deaths resulting from health disorders. As the provincial programs operate within a national environment, Health Services and Resources also provides a national program of information used by the health community at large.

The objective of Health Services and Resources is accomplished by undertaking the following:

- the development of guidelines and standards for health services and facilities;
- the development of innovative programs, strategies, systems and models of care and service delivery and facilities design;
- the provision of consultative and technical advisory services to international, federal, provincial and non-governmental entities and the public;
- the preparation of reports, studies, information bulletins, and publications;
- attendance at sponsoring conferences, workshops, seminars, and symposia; and
- the granting of monies to national voluntary health organisations.

Performance Information/Resource Justification

The relationship of results to resources is largely dependent on the development of cooperative mechanisms which ensure joint policy planning and development among the federal and provincial governments.

While many of the goals and initiatives originate from the Federal/Provincial Advisory Committee structure, a good proportion arise from continuing liaison with federal and provincial departments, professional associations, and other health organizations. This work is carried out in the areas of Mental Health, Community Health, Health Facilities Design, Health Manpower, Health Assessment, and Institutional and Professional Services.

Health Services activities have the following impacts on the health care system:

- **agreement among federal, provincial and non-governmental entities on priorities and courses of action;**
- **implementation of guidelines and standards by provinces, professionals and institutions;**
- **incorporation of technological and institutional design and program advancements by provinces, institutions, and professions;**
- **shifts in provincial health care service thrusts from curative to preventive services and from institutional to community programs;**
- **evaluation and dissemination of information on health technologies, health care services, health manpower, and the improvement of physical settings in which health care is provided;**
- **acquisition of new information for application in policy and program development; and**
- **continued and improved operation of National Voluntary Health Organizations.**

Recent Performance - 1983-84

Development of Guidelines and Standards

- Federal/Provincial Working Groups and Task Force were involved in the preparation and/or revision of clinical guidelines in the areas of occupational therapy, childhood hearing impairment, the health surveillance of workers, the treatment of obesity, the practice of dental hygiene and the clinical use of apheresis.

- A major, joint Federal/Provincial Hospital Productivity Improvement Program was initiated and encompassed such areas as National Workload Measurement Systems and Staffing Methodologies and Guidelines. In all, nineteen hospital departments are now in various stages of systems development.

- To guide the development of design guidelines for facilities for the elderly, in other than a hospital setting, an ad hoc federal/provincial interdisciplinary committee was established.

- The unique feature of this group whose activities are supported by the federal/provincial Deputy Ministers, is its three areas of participation: health services, social services and CMHC.

- Post-Occupancy Evaluation Methodologies - A prototype methodology for evaluating the design effectiveness of Emergency Departments (the first in the series) was developed. This is a valuable contribution because it examines both technical effectiveness and the impact of spatial layout and amount of space of staff functioning and patient comfort.

Innovative Programs and Strategies

- Pilot trials of a Child Health Record were started in Nova Scotia, Prince Edward Island and New Brunswick. In addition, the Record was issued to all babies born in Canadian Forces Hospitals in Lahr, West Germany and Cold Lake, Alberta. The Record is designed to provide a child's parent with a permanent record of significant health-related events in the child's life. The pilots are intended to investigate the feasibility of the Record.

Reports

The following reports were completed:

Physician Manpower in Canada 1980-2000; Mental Health Manpower (Supply and Requirements); Provincial Incentive Programs for Health Occupations based on geographical and functional shortages; Baccalaureate Training on Nursing; Enrolment and Graduation: Canadian Faculties of Medicine 1983-84; Survey of Post-M.D. Clinical Trainees (Interns and Residents) 1983; Relationship Between the Output of Canadian Medical Schools and the Size of the Physician Supply in Canada; Three reports on the

Optimum Energy Use in Hospital Processes - Dietary, Sterilization, Laundry and Energy Recovery from Sanitary Effluent; A National Cancer Survival Data System (Female Cancers); A working paper on The Utility and Uses of Cancer Survival Data; The Report of the Federal/Provincial Working Group on the Prevention and Control of High Blood Pressure; Rationalization of Graduate Training for Physicians in Community Medicine (the report of the March 1983 workshop); Canada's Mental Health/Santé mentale au Canada - highly acclaimed quarterly journal, reached over 100,000 people in the mental health field; Psycho-Social Impacts of Resource Development in Canada; Prevention Now Alzheimer's Family Manual; The Periodic Health Examination; Working Patterns of Rehabilitation Teams; The Impact of Customs Tariffs on the Cost of Providing Dental Care; A National Study on Dental Care Programs in Canada.

Studies

The following were supported and/or completed:

- **The first stage of the feasibility study for the Nova Scotia/Saskatchewan Cardiovascular Disease Project was completed**
- **The Financial Health of Canadian Hospitals (joint with C.H.A.)**
- **The Hospital of the Future (joint with C.H.A.)**
- **Surgical Treatment of Morbid Obesity**

Conferences, Workshops, Seminars and Symposia

The following were partially and/or fully supported and/or convened by the Department:

- **The Northeast Canadian-American Health Conference**
- **Annual federal/provincial conferences in nursing and dietetics**
- **Federal/Provincial Advisory Committees on Community Health and Health Manpower and their sub-committees and working groups**
- **Symposium "Research Findings Significant to Priority Setting in Mental Health Services"**
- **Symposium "Services for Children Affected by Separation and Divorce"**

- Colloquium on care of the disturbed elderly was held, co-sponsored with Canadian Psychiatric Association

- Design and Technology International Conference. The results of the deliberations of the participants, largely disabled persons, were published as the state-of-the-art manual to be used in planning of "barrier-free environments".

- Energy Audit and Workshop was conducted in 15 hospitals in Manitoba. The results indicated that an energy conservation potential ranging from 15 percent to 20 percent exists in all hospitals in Canada. This potential energy saving could be trapped by implementing a minor number of moderate cost retrofit measures.

- Regional workshops were supported by the Mental Health Division and work on epidemiology of mental retardation initiated with National Institute for Mental Retardation.

- National Seminar on Hospital Lighting.

Grants and Contributions

- Family Planning grants totalling $174,000 were awarded in order to continue projects funded in the previous fiscal year.

- Sustaining Grants to National Voluntary Health Organizations in the amount of $2,793,000 were awarded to 44 organizations to partially offset the operating costs of their national offices.

C. Extramural Research

Objective

To support scientific activities relevant to the concerns and objectives of the Department and to provide for the training, placement and maintenance of needed research personnel in the areas of health services and public health.

Resource Summary

Extramural Research accounts for approximately 0.3 percent of 1985-86 total program expenditures and 6.9 percent of the total person-years.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

	16,993	19	17,065	18	(72)	1

Major variances are explained in the program overview (page 2-10)

Description

Extramural Research: This activity is responsible for directing and managing the National Health Research and Development Program (NHRDP), which is the Department's major source of funding for health research performed extramurally. Any institution, corporation or society capable of conducting activities falling within the terms of reference of the NHRDP, with the exception of departments, agencies

and corporations of the Government of Canada, may apply for support under the Program. Applications from governments of provinces or municipalities or departments thereof may also be considered.

Particular emphasis is currently placed on research dealing with environmental health hazards, illness prevention and health promotion, the availability, accessibility and quality of health care, the health of Native peoples, and rehabilitation. Training and career awards are concentrated in research fields dealing with the health of populations, including epidemiology, biostatistics, medical sociology and health economics.

Performance Information/Resource Justification

Comprehensive Program Guides are prepared and circulated to recipients and potential applicants and funding competition are announced via newsletter.

Project proposals are first reviewed by program staff for completeness and conformity to the terms of reference of the NHRDP. All eligible proposals are then assessed by experts within the Department of National Health and Welfare for their relevance to Departmental objectives and programs. A review of the scientific significance of each is conducted by appropriate external appraisers. The final step in the review process is a thorough evaluation by one of a series of peer review committees comprising experts in methodology and subject matter. To be approved for funding, a proposal must be judged satisfactory against all review criteria. All applications, except those from national organizations, are sent to the health ministry in the province of origin for the opportunity to assess the relevance of the research to provincial needs and priorities.

Approximately one-third of the proposals received by the NHRDP are eventually funded, the majority after the applicants have agreed to changes recommended at one point or other in the review process, either to enhance the relevance of the work or to improve its scientific quality. Contribution agreements are entered into with successful applicants: on average, these cover three years of research; and all contain provisions for monitoring of progress, reporting of findings and use of funds, and communication with Departmental officials who have an interest in the project.

The communication of research outcomes also constitutes an important part of this activity (financed through the operating budget, not contributions). The objective is to ensure that all potential users of research findings - the Department, the provinces, the health professions, and others - have ready and timely access to results. In addition to publishing a biennial inventory of research, the NHRDP provides general access to all final project reports, and actively pursues direct exchanges between funded researchers and potential users of the information.

To support the long-term capacity of Canadian researchers to undertake research in areas of interest to Canadian health authorities, the NHRDP provides post-graduate research training fellowships, and career awards to scientists judged by their peers to be leaders in the conduct and generation of significant research. The NHRDP has also recently introduced the first national health research competition for young Canadians, with the collaboration of the Youth Science Foundation, to encourage greater awareness of, and participation in, the health research field.

Recent Performance - 1983-84

The majority of resources used by this activity are in the form of contributions (prior to April 1, 1982 in the form of both grants and contributions). Figure 14 presents the specific areas to which resources are directed, with the exception of 1985-86 for which allocations have not been completed.

Figure 14: Grants and Contributions ($000) - National Health Research and Development Program

	1985-86	1984-85	1983-84
Projects			
Environmental Health Hazards		2,285	2,276
Biological Determinants of Health		2,622	2,342
Health Consequences of Human Behaviour		1,309	925
Health Care Organization		7,629	6,946
Modification of Human Behaviour Patterns		722	600
		14,567	13,089
Awards			
Training		1,251	1,026

		3,423	2,835
Conferences		87	120
	19,309	18,077	16,044

In addition to being the only federal government funding agency in the domain of public health research, and research on the organisation, economics and operation of the national health care system, the NHRDP has assumed a leading role on such issues as rehabilitation, AIDS, UFFI, and occupational health.

The NHRDP celebrates its 10th anniversary of operation in the 1984-85 fiscal year.

In 1983-84, the NHRDP managed 342 research project contribution arrangements, 96 training awards, 65 career awards, and a variety of research conference awards. The total value of these in the year was $16,044,000. A sampling of these projects follows:

- A National Health Knowledge Survey Among Canadian School Children; A.J.C. King, Social Program Evaluation Group, Faculty of Education, Queens University at a cost of $141,950 over a one year period.

- Etiological Study of Malignant Melanoma in Western Canada; R.P. Gallagher, Division of Epidemiology and Biometry, Cancer Control Agency of British Columbia, at a cost of $85,450 over a two year period.

- Adult Day Care for the Elderly - An Evaluation; N.L. Chappel, Department of Social and Preventive Medicine, University of Manitoba, at a cost of $59,570 over a one year period.

- A Comparison of Influenza Vaccine and Amantadine in the Prevention of Influenza; Dr. F.Y. Aoki, Department of Medical Microbiology, University of Manitoba, at a cost of $85,100 over a three year period.

D. Health Promotion

Objective

To help Canadians achieve healthy lifestyles

Resource Summary

Health Promotion accounts for approximately 0.3 percent of 1985-86 total program expenditures and 40.9 percent of the total person-years.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Major variances are explained in the program overview (pages 2-10)

Description

Health Promotion: The concept of health implied in the Health Promotion activities is one of "physical, mental and social well-being". Attainment of this positive state of health by Canadians requires:

- creation of a general public interested in and informed about health and health issues;
- active citizen involvement in the improvement of their health status;
- active support for health promotion and disease prevention amongst health professionals;
- government and other organizational policies that support the aims of health promotion.

To improve the health status of Canadians, direct communication with the public has become the major health promotion effort of the Department and this Program. It is a key component of the Program to address social norms and the marketing and consumer product environment which exert a negative influence on the lifestyles of Canadians. Promotional activities encompass television, radio, newspaper and magazine advertising, distribution of printed materials offering practical health information and appearance at fairs and exhibitions. The five regional Health Promotion offices facilitate access to educational materials and increase public awareness of the Federal Health Promotion Program.

Of the issues or problems that figure prominently as factors in sickness and premature death, program priorities are concentrated on smoking, nutrition, alcohol and drug abuse. Certain groups have been given special attention because of the specific nature or the consequences of their health problems. These include special programs for children and youth, women, the elderly and the disabled.

Contribution payments are made to citizen groups and individuals, national health associations, organizations of health workers and occasionally provinces. Their purpose is to encourage self-help and citizen participation in health promotion, increase the commitment and skill of health workers, improve the quality of programs and stimulate experimentation and innovation. Contributions are used to produce information and education materials, to undertake training, to assist sponsors in strengthening their organizations and to support demonstration projects. Figure 18 in the recent performance section presents the specific areas to which resources are directed.

Health promotion uses four lines of action: public information, promoting public support for healthy lifestyles, encouraging self-help and citizen participation and placing greater emphasis on health promotion through health care programs.

Figure 17: Health Promotion Approach

Strategies or Lines of Action	Program Outputs
Informing and equipping the public to deal with lifestyle issues.	Production of information and educational material concerned with the health significance of lifestyle, the factors affecting lifestyle and material suggestions for change.
Promoting a social environment that supports healthy lifestyles.	Government advertising to promote health and policies to discourage commercial advertising that may lead to harmful consumptions.
Encouraging self-help and citizen participation in health promotion.	Contribution funding of community, regional and national groups to develop innovative health promotion projects.
Stimulating adoption of health, education, welfare and other policies and programs that support health promotion.	Goal-setting, projects, production of specialized materials, training demonstration projects in cooperation with provincial jurisdiction and voluntary agencies.

Performance Information/Resource Justification

Health Promotion: Health Promotion has established a system of monitoring the performance of its major programs. Tracking of program results and effectiveness enables validation of the Health Promotion approach and the Program priorities. Some of the key indicators of expected results are:

- population awareness of program messages;
- public demand for educational resources;
- communities and organizations that use educational resources offered by the Program;
- collaborative projects with non-government organizations;
- educational resources that reach the general public and selected groups and self-help groups such as parents, school children, senior citizens and health professionals;
- training of lay and health professionals in support of self-help groups;
- funding of contribution projects for self-help groups.

Recent Performance - 1983-84

Tobacco

Generation of Non-Smokers is a program to prevent young people from starting to smoke. In January 1983, after the first year of the advertising and promotion campaign, 51 percent of the target group of 12-17 year olds were aware of the campaign - a 35 percent increase over the previous year. One year later, 59 percent of the target audience recalled one of the commercials.

Time to Quit, a community based self-help program developed in cooperation with the Canadian Cancer Society, distributed 85,000 self-help booklets in the city of Winnipeg. Results indicate a two year decline of 6% in the prevalence of smoking in Winnipeg compared to 3% in the control city of Edmonton.

Alcohol

Dialogue on Drinking advertising focusses on 15-29 year olds. Fifty six percent indicated that they were aware of the program in February 1984, eight months after the first wave of advertising. There has been a 13 percent drop in the proportion reporting use of alcohol in the past month from one year earlier.

The National Training System is a collaborative Federal-Provincial program aimed at training staff of provincial and territorial drug agencies. An evaluation carried out by the Department in 1983 found that the NTS contributed significantly to the development of training capabilities in the provinces and territories. Since 1978, 43 courses based on materials developed by the program have been conducted and a total of 1,387 addictions' workers trained.

Drugs

The Cannabis Information Program distributed 1,250,000 copies of Stay Real and Straight Facts publications to health organisations, drug and law enforcement agencies. About 56 percent of the exposed target group recalled the Stay Real ads after less than a full year of exposure to the campaign.

Nutrition

Nutrition for Children, a series of films Bonjour, comment manges-vous? have been shown 7,200 times since their release in 1979. 375 copies have been sold to school boards. In addition, 500 French and English multi-media kits have been distributed over the past two years.

Nutrition Recommendations for Health Professionals and Industry. Since 1981-82, 5.1 million copies of Canada's Food Guide Tear Sheet and 256,000 copies of Canada's Food Guide Handbook have been distributed.

Child and Family Health

The Hospital Advocacy Kit on Breastfeeding was developed in 1983 as part of a broader program started in 1979. The kit consists of materials to be used in counselling mothers and forms the basis for in-service training in the area of breastfeeding. From 1981, 300,000 copies of the booklet have been given to mothers, 500,000 copies to physicians, nurses and the general public. There has been an increase in breastfeeding from 25 percent in the late sixties to 70 percent in 1982.

Women

It's Just Your Nerves is an educational resource on women and addictions. Over 70,000 copies of a new pamphlet, Women and Alcohol, were distributed in 1983-84. Two hundred and eighty women from health, social services and women's organizations were trained in the use of this resource.

Workplace

Corporate Challenge involved 15,000 employees in 1,041 companies to participate in full day events to promote healthy lifestyles last year.

Evalu*Life is a computerized risk assessment service designed to assist health professionals in counselling clients regarding health promotion. It was used by 350 health professionals in a variety of settings in 1983-84.

School Health

The Health Knowledge Survey is a survey of Canadian school children to determine their knowledge regarding health. Seven hundred copies of this report were distributed in 1983 to interested members of the public.

Five hundred copies of the Directory of Senior Professionals Promoting the Health Education of Children and Youth in Canada were distributed to health educators.

The Hole in the Fence is an educational resource for children between five and ten years. Approximately 36,000 storybooks have been sold, with an additional 5,000 distributed during pilot testing.

Salut Santé is a series of video cassettes providing health education in French to 10-16 year old students. The initial broadcast of the series was seen by an audience of 200,000 viewers.

Health Promotion Information

Health Education is a quarterly magazine for health professionals. 10,000 copies of each issue were distributed. About 70 percent of readers rated the magazine as useful.

The Close Up on Health Exhibit Program was shown at 10 major exhibitions across Canada and viewed by five million people. Some 34,000 people completed the "Operation-Lifestyle" questionnaire.

The Close Up on Health series is designed to increase the visibility of federal health promotion programs, practices and messages. In 1983-84 a tabloid was published in 206 weekly newspapers and 51 dailies. 575,000 leaflets were distributed in 830 supermarket and weekly columns distributed as fillers were published in 140 newspapers.

Production and Distribution of Health Promotion Products. During 1983-84, 7.5 million items were distributed in response to requests for both specific and general health promotion information.

Contributions

In 1983-84, the Health Promotion Contributions Program supported 152 projects with a total of $3.8 million. The projects funded were community based demonstrations, development of the education and training of mutual help and advocacy groups on health promotion issues. They were sponsored mainly by voluntary and citizen

organizations who work with disadvantaged groups more than a million disadvantaged Canadians received information to increase their awareness about healthy lifestyles as a result of the Program.

Figure 18 displays expenditures by target group and project type.

E. Program Administration

Objective

To provide overall direction to and coordination of program activities by providing policy advice and direction as well as financial and administrative services. This activity is also responsible for the development, improvement and implementation of planning systems.

Resource Summary

Program Administration accounts for approximately 0.04 percent of 1985-86 total program expenditures and 21.0 percent of the total person-years.

Figure 19: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Costs	2,680	58	2,782	64	2,457	56

Approximately 77.7 percent of the costs are personnel related. Other costs consist primarily of expenses for communications, materials, supplies and professional services.

	$	P-Y	$	P-Y	$	P-Y
Operating Costs	2,457	56	2,853	67	(396)	(11)

Major variances are explained in the program overview (pages 2-10)

Description/Resource Justification

This activity, although comprised of four separate functions, collectively provides policy advice and direction, and program delivery support to the Branch.

Office of the Assistant Deputy Minister is responsible for policy development and planning to ensure that objectives are met and policies effected as efficiently and effectively as possible. Advice is provided to senior departmental managers on policies and objectives of concern to the Branch and Department.

Financial Services: encompasses the provision of advice and services regarding the control of financial and human resources in accordance with the Financial Administration Act, and various central agency policies, guidelines and directives. Included in these services are commitment, budgetary and expenditure controls, delegation of authority, Departmental Financial Reporting System maintenance and verification, EDP consultative service, and financial reporting responsibilities.

Planning Services: involves the ongoing assessment of changing program requirements, environmental influence, central agency concerns and the effectiveness of existing programs. In light of these factors coordination of various program activities, policy direction and guidance is provided for strategic, operational, and work planning. Ongoing analysis of Branch programs and recommendations for program delivery improvements are also provided.

Administrative Services: facilitates Branch program delivery through the provision of direct support services and the management of all property and material. This encompasses Word Processing, Library and Record Services, Publication and Forms Management, Material Management, Property, Security and Safety Management and some staff (personnel) services.

Recent Performance 1983-84

In addition to the provision of required policy direction and program support services, the following results were achieved:

- **The Canada Health Act - provision of executive direction and support services was an essential element in the drafting of the Canada Health Act and in its preparation for the eventual tabling and passage.**

- **The Management Information System - A major innovation over the past year has been a requirement analysis, system development proposal and subsequent managerial approval of a management information system. When fully operational, the system will provide fully integrated planning and financial information and enable ongoing results/resources reporting.**

- **Planning System - A Branch planning system was developed and implemented to direct long range strategic, operational and work planning exercises. The design of the system also ensures the compilation of a data base that facilitates efficient responses to external information requests.**

- **Material Management Information System - The initial steps in the development of the system were attained. An analysis of Branch needs resulted in the establishment of preliminary requirements and the design of draft reporting formats.**

	6,516,725,000	6,132,477,000	5,587,886,886

*Payments under the Federal-Provincial Fiscal Arrangements and Post-Secondary Education and Health Contributions Act 1977.

B. Cost Analysis

Net Program Cost

The 1985-86 estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items must also be included when considering the actual costs of operating the Program.

Figure 24: Total Cost of Program for 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Total 1984-85
Total Cost of Program	6,540,073	1,127	6,541,200	6,157,083

The adjustments made to the estimated operating expenditures to arrive at a total cost include accommodation provided without charge by Public Works ($904,000) and other services provided without charge by other departments ($223,000).

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $113,867,000 for operating expenditures and grants and contributions to operate the Social Services Program during the 1985-86 fiscal year. Statutory authority exists for the Program's expenditures on Canada Assistance Plan payments, which are estimated at $3,928,400,000 for 1985-86. Additionally, contributions to employee benefit plans of $1,397,000 will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- The objective of the Social Services Program is to support the provision of social assistance and services to persons whose economic circumstances are inadequate to meet their basic needs or whose social circumstances expose them to the risk of poverty, isolation or dependency. The program supports the provision of assistance benefits, welfare services, comprehensive programs of vocational rehabilitation services, promotes and provides opportunities for research and the development of expertise in social welfare, innovation in social services and meaningful participation for retired Canadians in activities they choose and plan. Financial requirements for these efforts in 1985-86 will be approximately $4,044 million.

- The program provides financial support under the Canada Assistance Plan (CAP) for provincial and territorial social assistance and welfare services programs for 2.5 million socially and economically disadvantaged Canadians; and under the Vocational Rehabilitation of Disabled Persons Act (VRDP) financial support for provincial and territorial vocational rehabilitation programs provided to over 100,000 disabled persons. Financial requirements for contributions under CAP and VRDP are expected to be nearly $4,000 million in 1985-86, an increase of 7.7 percent over the prior year. This increase is due primarily to continuing high numbers of provincial social assistance cases. (see page 3-16)

- Through National Welfare Grants (NWG), support is provided to research, demonstration projects and the development of expertise in the social welfare area. Funds devoted to this activity reach a total of $3.5 million. Financial support is provided to 26 major national voluntary social service organizations for $3.4 million. (see page 3-29)

- Information and consultative services are provided to a wide range of organizations, professional and community groups as well as specialists on a number of social issues such as day care, family violence, child abuse and independent living. (see page 3-29)

- Financial and consultative support is made available to groups of senior citizens under New Horizons. These contributions

amount to $13 million and reach approximately 250,000 persons. (see page 3-32)

Specific goals for 1985-86 are:

Canada Assistance Plan:

- Determine the limits of CAP's mandate in those program areas where the mandates of other federal departments are involved, for example, Canadian Employment and Immigration Commission (CEIC) with respect to the employability of social assistance recipients; the Solicitor General with respect to young offenders.

- Clarify and resolve issues of provincial/federal concern as related to the agreements, guidelines and policies under the Vocational Rehabilitation of Disabled Persons Act.

- Promote the establishment of audit and settlement committees in provinces to enable the more timely settlement of claims under CAP and VRDP.

- Strengthen federal/provincial relations through: the Continuing Committee of Federal/Provincial/Territorial Officials reporting to Deputy Ministers of Social Services; orientation and problem solving exercises; preparation and updating of the policy and procedures manual and dissemination of cost-sharing guidelines.

Social Development:

- Provide technical assistance and funds to approximately 85 projects designed to support the development and improvement of social services, benefitting, in particular, disadvantaged Canadians.

- Support the operations of 26 national voluntary social service organizations.

- Help the development of expertise in the social welfare field through the granting of fellowships.

- Maintain the consultative and information services provided in the social services area.

New Horizons:

- Support the creation of approximately 2,000 projects by senior citizens, reaching about 250,000 persons.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Canada Assistance Plan	4,013,808	3,746,613	267,195	3-17
Social Development	10,782	9,997	785	3-28
New Horizons	17,397	17,438	(41)	3-32
Program Administration	1,677	2,748	(1,071)	3-35
Program Total	4,043,664	3,776,796	266,868	
Authorized Person-Years	283	282	1	

Explanation of Change: The increase of $266,868,000 in the 1985-86 requirements over the 1984-85 forecast is primarily made up of increases in statutory payments under the Canada Assistance Plan because of continuing high numbers of provincial social assistance cases.

B. Recent Performance

1. Highlights

All activities of the CAP Directorate in 1983-84 were in support of its main goal of maintaining the effective and efficient administration of CAP and VRDP. These included:

- sharing in the costs of provincial assistance and welfare services programs with respect to approximately 1,500 pieces of provincial law (acts, regulations, amendments), 5,360 homes for special care and 4,700 provincially approved agencies providing welfare services;

- liaising actively with other federal departments in order to deal more effectively with issues arising from interfaces with programs administered by other federal departments such as the Solicitor General;

- conducting several orientation and problem solving sessions with provinces as well as information sessions with a number of municipalities, voluntary organizations and federal departments;

- developing "Guidelines on Likelihood of Need" relating to the welfare services provisions of CAP;

- participating in the work of the Continuing Committee of Officials Reporting to Deputy Ministers by preparing discussion papers, status reports and policy statements on a range of cost-sharing issues under review;

- compiling major sections of the CAP Policy Manual dealing with assistance and financial policies;

- initiating a pilot project to establish a federal-provincial audit and settlement committee with British Columbia to put settlements on a more current basis and discussing the application of this approach with other provinces.

In 1983-84, National Welfare Grants funded 86 research and demonstration projects, the majority of which were aimed at the disabled, families in crisis and children and youth (see page 3-30). It also contributed to the development of expertise in the social welfare area by granting 16 fellowships. Through sustaining grants, it shared in the operational costs of 26 national voluntary social service organizations.

Social Services Development brought the National Clearinghouse on Family Violence to operational status in its efforts to reduce violence in the family. This included the production of several films and documents, and direct involvement in planning the Fifth International Congress on Child Abuse and Neglect. The National Day Care Information Centre worked toward the implementation of the recommendations for action of the Second Conference on Day Care. It produced statistical reports and publications related to the safe operation of day care centres. The Centre also worked closely with national advocacy groups to improve the provision of day care across Canada.

New Horizons increased the proportion of service-oriented projects by nearly 40 percent which was double its 1983-84 goal of a 20 percent increase. (see page 3-34) It reached more than a quarter of a million Canadians across the country, meeting all its operational goals.

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Canada Assistance Plan	3,383,349	3,214,102	169,247
Social Development	9,410	8,525	885
New Horizons	16,589	16,476	113
Program Administration*	2,514	2,852	(338)
Program Total	3,411,862	3,241,955	169,907
Authorized Person-Years	273	279	(6)

* The Main Estimates Figures have been restated to conform with the revised break-out by activity adopted for 1985-86. For further details see Section III, page 3-40.

The differences result mainly from the increased numbers of provincial social assistance cases cost-shared under the Canada Assistance Plan.

C. Background

1. Introduction

The focus of the Social Services Program is on persons whose economic circumstances are inadequate to meet their basic needs or whose social circumstances expose them to the risk of poverty, isolation or dependency. The role of the program is to support assistance and services for these people, primarily by sharing the cost of provincial and municipal programs directed to them, including programs of vocational rehabilitation for the disabled. Other methods of support are financial assistance to promote and maintain the participation of retired Canadians in the community, and financial support and advice for national voluntary and professional organizations as well as for research and training. Through these activities, the program makes an important contribution to Canada's social security system by ensuring the maintenance of a safety net for Canadians.

The program's principal links are with provincial and territorial governments who have responsibility for the delivery of social assistance and services, and with universities, voluntary organizations, and professional associations. Important links are also maintained with other branches of Health and Welfare such as the Income Security Programs Branch and the Health Services and Promotion Branch; other federal departments such as Employment and Immigration, Solicitor General, Justice, Indian and Northern Affairs, Finance, Secretary of State and Veterans Affairs.

2. Legal Mandate

The program draws its general mandate from the Department of National Health and Welfare Act which confers on the Minister responsibility for all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Parliament of Canada has jurisdiction. The Social Services Program includes the administration of the following legislation and authorities:

- Canada Assistance Plan (1966)
- Vocational Rehabilitation of Disabled Persons Act (1961)
- Young Offenders Agreements (with New Brunswick, Quebec, Ontario, British Columbia, and the Yukon).

3. Program Objective

The objective of the Social Services Program is to support the provision of social assistance and services to persons whose economic circumstances are inadequate to meet their basic needs or whose social circumstances expose them to the risk of poverty, isolation or dependency.

4. Program Organization for Delivery

In the Expenditure Plan for 1984-85, this Program was included in the Health and Social Services Program. For an explanation of the division into two programs see Section III, page 3-40.

The Social Services Program is under the direction of the Assistant Deputy Minister, Social Service Programs Branch and is divided into four activities: Canada Assistance Plan, Social Development, New Horizons and Program Administration. These activities correspond to the organizational structure of the program.

Figure 3 illustrates the resource allocation by organization structure within the Social Service Programs Branch.

Figure 3: Organization Structure and 1985-86 Resources

To ensure closer contact with their clients, certain activities have decentralized their operations: the Canada Assistance Plan has field offices in provincial capitals accounting for approximately 45 percent of its person-years; and New Horizons maintains regional offices accounting for 77 percent of its person-years. The remaining activities are administered from the National Capital Region.

Figure 4: Activity Structure

D. Planning Perspective

1. Environment

A number of factors have major implications for the Social Services Program:

- High levels of unemployment mean continuing high provincial social assistance caseloads. The number of cases as of March 1982 was 770,000 as compared to 1,000,000 cases as of March 1984. The most significant change in the welfare caseload is the large number who are capable of working, and who want to work but cannot find work.

- Provincial expenditures to maintain the current social assistance caseload have risen and in turn payments to the provinces under the Canada Assistance Plan have increased. CAP's expenditures for social assistance alone rose from $2.08 billion for 1982-83 to $2.47 billion for 1983-84.

- Most provinces have made modifications to existing social assistance or social services programs or have developed new initiatives to cope with the economic and social pressures placed on the income security system. The continuing challenge facing the Social Services Program is to provide federal support to the provinces and other social agencies during this particularly difficult period.

- An increased awareness of the needs of groups such as the disabled, single parent families, battered women and abused children has caused provinces to initiate or substantially expand programs for these groups. The number and proportion of the population over 65 years of age continues to be a growing factor. The grants and contribution programs continue to focus their efforts on these emerging priorities.

2. Update on Previously Reported Initiatives

The Canada Assistance Plan continued to work closely with provinces to provide federal support for social assistance programs during difficult

economic times. On-going federal-provincial consultation and specific problem-solving sessions assisted provinces in making fuller use of the cost-sharing provisions of CAP. Efforts also focused on liaison with other federal departments to coordinate federal support for specific provincial initiatives. Discussion of specific issues involved joint federal meetings with participation from provinces.

Initiatives to support day care services included the implementation of recommendations for action of the Second Conference on Day Care such as extensive consultation with national day care advocacy groups and the production of reports and publications on the operation of day care centres. To reduce violence in the family, the National Clearinghouse on Family Violence was brought to operational capacity, it produced films and documents, planned its participation in a major International Congress on Child Abuse and Neglect as well as a national day on child abuse.

During 1983-84 the National Welfare Grants (NWG) activity funded 86 research and demonstration projects, the majority directed toward disabled persons, families in crisis, children and youth. By granting 16 fellowships NWG contributed to the development of expertise in the social welfare area. Through sustaining grants, NWG shared in the operational costs of 26 national voluntary social service organizations.

New Horizons doubled its goal of supporting an increased proportion of service oriented projects. Over a quarter million aged Canadians were reached by this activity through the maintenance of over 75 percent of New Horizons staff in its regional offices.

3. Program Effectiveness

The Social Services Program has a major impact on provincial social assistance programs and on social service programs delivered by provincial, municipal and voluntary agencies.

- The Canada Assistance Plan and the Vocational Rehabilitation of Disabled Persons Act have been successful in supporting social welfare programs. This support has been a major factor in maintaining the social "safety net" for the poorest Canadians. These programs of last resort continue to support at any one time an estimated 2.5 million people or 10 percent of Canada's population. The VRDP program supports an estimated 100,00 disabled Canadians.

- In addition, the Program has insured the maintenance of viable, national voluntary organizations through its sustaining grants and encouraged research vital to major target groups by focusing over 80 percent of available support to research related to the disabled, elderly, single parent families and battered women.

- The Program has funded New Horizons projects involving over 250,000 elderly Canadians.

Section II
Analysis by Activity

A. Canada Assistance Plan

Objective

- To support the provision by provinces and territories of adequate assistance and institutional care programs for persons in need; and

- To support the provision by provinces and territories of welfare services programs which have as their object the lessening, removal or prevention of the causes and effects of poverty, child neglect or dependence on public assistance.

- To support the development by provinces and territories of comprehensive and coordinated programs of vocational rehabilitation for physically and mentally disabled persons.

Resource Summary

This activity accounts for approximately 99.3 percent of 1985-86 total program expenditures and 36.7 percent of the total person-years.

Approximately 99.9 percent, of the total activity expenditures are payments to the provinces for:

- social assistance and welfare services under the Canada Assistance Plan (including the related Young Offenders Agreements); and

- rehabilitation programs under the Vocational Rehabilitation of Disabled Persons Act.

The overall increase in expenditures over 1984-85 is primarily due to continuing high numbers of provincial social assistance cases.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Description

The Canada Assistance Plan activity comprises two components: the Canada Assistance Plan including the related Young Offenders Agreements and the Vocational Rehabilitation of Disabled Persons Act.

Canada Assistance Plan: The Canada Assistance Plan (CAP) shares 50 percent of the cost to the provinces of providing social assistance to persons in need; and welfare services to persons in need or likely to become in need if they do not receive such services.

The terms of cost-sharing are specified through the CAP Act, Regulations and agreements with each province and through program policies outlined in guidelines. The agreements include three schedules which list provincial legislation, homes for special care and provincially approved agencies that have been accepted by the federal government for cost-sharing under the Plan.

While the federal government specifies conditions for sharing, provincial governments are responsible for the design, comprehensiveness, and delivery of programs to the public. The level of the federal payment under CAP is influenced primarily by the following factors:

- the number of provincial social assistance cases;
- provincial program priorities (whether or not programs are designed to utilize CAP cost-sharing); and
- social assistance rate increases.

Conditions for cost-sharing assistance, which includes care in homes for special care and health care, are:

- financial assistance must be provided to persons in need (i.e., those who are found, on the basis of a needs test, to be unable to provide adequately for themselves and/or their dependents; or persons under the age of 21 years who are in the care, custody or supervision of a child welfare authority; or foster children);
- provinces must agree that a period of residence in the province or in Canada will not be required as a condition of eligibility for assistance; and
- provinces must establish, by law, a procedure for appeals from decisions with respect to social assistance.

Conditions for cost-sharing welfare services are:

- recipients of welfare services must be persons in need or persons likely to become in need;
- services must be provided directly by the province or by provincially approved non-profit agencies; and
- health care services and services relating wholly or mainly to education, correction and recreation are excluded from cost-sharing under CAP.

The Canada Assistance Plan contains provisions for cost-sharing of assistance, welfare services, and work activity projects.

Eighty percent of CAP expenditures fall under its assistance provisions, which include general assistance (the cash welfare payment), care in homes for special care, certain health care costs, and the majority of child welfare costs.

Of the remaining 20 percent, the major portion of expenditures is for federal support to provincial administration costs (i.e., costs of administering assistance and welfare services programs) and welfare services such as day care and homemaker services. The remaining costs are for child welfare expenditures not already included as assistance costs and for work activity projects.

Payments under CAP, by province and by program component, for the fiscal year 1983-84 are illustrated in Figure 6. The CAP program components are described below:

General Assistance: CAP shares in the cost of general assistance which is provided by each province to persons who are in need. Assistance includes the following basic requirements: food, shelter, clothing, fuel, utilities, household supplies, and personal requirements. Assistance may also include special needs such as items incidental to carrying on a trade or other employment; items necessary for safety, well-being or rehabilitation, including essential repairs or alterations to property, items required by disabled persons; and prescribed welfare services.

Homes for Special Care: CAP shares in the cost to the provinces of providing care in homes for special care, e.g., homes for the aged, nursing homes, child care facilities and hostels for battered women and children. (Since April 1, 1977, the major portion of federal costs related to long-term residential care for adults has been subsumed under the Extended Health Care Services Program of the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act);

Health Care: CAP shares in certain health care costs (e.g. drugs, dental care) if they are not covered under universal health care programs of the provinces or are not block funded under the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act; and

Child Welfare: The majority of the expenditures in this component relate to the costs of maintaining children in foster homes. These are shared as assistance costs. (Costs of care provided in facilities for children are included in the homes for special care component.) The remainder of the child welfare costs consist of welfare services. These include services for children who are in need of protection because of abuse and/or neglect; adoption services; and preventive services to children in their own homes.

Welfare Services: CAP shares in certain costs to the provinces of providing a range of welfare services to persons who are in need or likely to become in need. Welfare services include:

- day care services for children;
- homemakers, home support, and similar services to support individuals and families in emergency situations or as an aid to independent living in the community for the elderly and the disabled;
- casework, counselling, assessment and referral services, including child welfare services;
- adoption services;
- rehabilitation services including services to the chronically unemployed (e.g., life skills training, referral and job placement services) and services to meet the special needs of persons at risk of being socially isolated, with particular emphasis on the aged and the physically and mentally disabled;
- community development services designed to encourage and assist members of deprived communities to participate in improving the social and economic conditions of their community;
- consulting, research, and evaluation services with respect to welfare programs; and
- administrative services relating to the delivery of assistance and welfare services programs.

Work Activity Projects: CAP shares in the costs of work activity projects designed to assist people who, because of personal or environmental barriers, experience unusual difficulty in obtaining or holding employment. Projects are designed to improve participants' motivation and capacity to work, and prepare them for entry or return to employment or further vocational training.

Figure 6: Federal Payments to the Provinces and Territories Under the Canada Assistance Plan by Component During Fiscal Year 1983-84

Province	General Assistance	Homes for Special Care	Health Care	Child Welfare	Welfare Services	Work Activity Projects	Total
				($000's)			
Newfoundland	44 584	8 882	5 950	3 641	8 027	194	71 278

Alberta	200 660	35 755	-	34 494	54 864	247	326 020
British Columbia	384 856	29 122	19 583	7 104	90 043	486	531 194
Northwest Territories	4 844	1 641	111	628	2 929	-	10 153
Yukon	904	29	-	137	571	-	1 641
Total	2 470 860	389 719	97 291	174 205	505 303	5 523	3 642 901

* The federal contribution to Quebec for its eligible programs under CAP consists of cash payments in the amount of $1,043,753,500 through the Department of National Health and Welfare and the value of 5 tax abatement units in the amount of $355,300,000 through the Department of Finance.

Note: These amounts reflect the payments made to provinces for claims submitted during the fiscal year and may include costs incurred in previous years.

Young Offenders Agreements: Under the authority of the Appropriations Act, the Department has entered into agreements with New Brunswick, Quebec, Ontario, British Columbia and the Yukon to share in the costs which they incurred in providing certain care and services to "young offenders." Such costs would have been shareable under the Canada Assistance Plan if the "young offenders" had been in the care of the provincial child welfare authority both in fact and in law.

These agreements were approved in the interest of equity and were an interim measure pending the development of legislation to replace the Juvenile Delinquents Act. With the proclamation of the new Young Offenders Act on April 2, 1984, there is no cost-sharing under the Young Offenders Agreements of any new intake but sharing will continue in services provided to "young offenders" who were in care prior to the proclamation of the Young Offenders Act until such services are completed or the young persons come under the jurisdiction of the new Act. It is anticipated that these agreements will be phased out by 1988.

Figure 7 illustrates the distribution of federal payments to provinces under the Young Offenders Agreements.

Figure 7: Federal Payments to the Provinces and Territories Under the Young Offenders Agreements During Fiscal Year 1983-84

Province	Total ($000)
New Brunswick	768
Quebec	- *
Ontario	19,320
British Columbia	3,846
Yukon	399
Total	24,333

* Changes to provincial legislation in 1979 re-established eligibility for sharing in these costs under CAP.

Vocational Rehabilitation of Disabled Persons Act: Under the Vocational Rehabilitation of Disabled Persons (VRDP) Act and Agreements, the federal government makes financial contributions to meet 50 percent of the costs incurred by provinces in providing a comprehensive program for the vocational rehabilitation of physically and mentally disabled persons. Although Quebec does not participate in the VRDP program, a significant portion of the costs borne by the province in providing services to the disabled is shared by the federal government under the Canada Assistance Plan.

Vocational rehabilitation programs are designed to assist physically and mentally disabled persons who are considered capable of attaining a level of functioning which would enable them to pursue a substantially gainful occupation such as employment in the open labour market; self-employment; homemaking; farm work; sheltered employment; or other work of a remunerative nature.

Services may be provided directly by the provinces or by voluntary agencies recognized and funded by the province for that purpose. Services may include:

- assessment;
- counselling;
- restorative services;
- provision of prostheses, wheelchairs, technical aids and other devices;
- vocational training and employment placement;
- provision of books, tools and other equipment required during the course of the vocational rehabilitation process; and
- provision of maintenance allowances as required by each individual.

Figure 8 illustrates the distribution of federal payments to provinces under the VRDP Act.

In addition to cost-sharing provincial research, the VRDP Act also authorizes direct grants to be made to individuals and to non-governmental organizations for research in respect of vocational rehabilitation for disabled persons. See Figure 20: Details of Transfer Payments (page 3-38).

Figure 8: Federal Payments to the Provinces and Territories Under the Vocational Rehabilitation of Disabled Persons Act During Fiscal Year 1983-84

Province	Total ($000)
Newfoundland	1,143
Prince Edward Island	502
Nova Scotia	2,864
New Brunswick	4,401
Ontario	35,139
Manitoba	1,671
Saskatchewan	3,684
Alberta	10,368
British Columbia	7,050
Northwest Territories	- *
Yukon	686
Total	67,508

Note: These amounts reflect the payments made to provinces for claims submitted during the fiscal year and may include costs incurred in previous years. The amounts do not include $40,000 in contributions for Vocational Rehabilitation Research.

* No claims submitted during 1983-84.

Performance Information/Resource Justification

The CAP Directorate is responsible for the administration of two major cost-sharing programs: CAP and VRDP. The main priority of headquarters and field staff is to ensure that these programs are administered in accordance with the CAP and VRDP authorities (i.e., legislation, agreements, guidelines and policies).

In order to maintain the effective and efficient administration of the programs, the work of the Directorate focusses primarily on three activities:

- determining which provincial submissions relating to the provision of assistance, welfare services and vocational rehabilitation can be shared under CAP and VRDP;

- consulting and liaising with provinces and other federal departments to promote a better understanding of the CAP and VRDP programs, including their links with other federal and provincial social security programs; and

- reviewing provincial claims to determine monthly payments and negotiating final settlements with provinces.

Staff time is devoted primarily to the process of determining the shareability of provincial programs under CAP and VRDP. The volume of submissions to CAP has increased by more than 50 percent over the last 5 years. These submissions must be reviewed individually and, in the case of institutions and agencies, may need to be visited by federal staff. Submissions have also become increasingly complex as provinces modify existing programs, develop new programs to meet the needs of their population, and strive to maximize cost-sharing in a wide range of their programs. In many cases, these require extensive discussion with provinces in order to determine the parameters and conditions of cost-sharing.

In the case of CAP, provincial submissions must meet certain basic conditions contained in the CAP authorities before they can be accepted for listing in one of the schedules to the CAP Agreement. These schedules relate to:

- "provincial law" authorizing costs of assistance and welfare services benefits;
- "homes for special care"; and
- "provincially approved agencies" providing welfare services.

Once a submission has been accepted for listing, Directorate officials must apply the CAP authorities in terms of the shareability of the specific benefits, the eligibility of clients receiving the benefits and the costs involved in providing the programs which may be shared under CAP. CAP is then able to make payments towards the shareable costs of provincial programs.

Provincial submissions to CAP for cost-sharing are at the discretion of the province. In order to keep up to date with new submissions, the listing process is continuous and an amending agreement for each province is prepared and signed twice annually.

Figure 9 illustrates the volume of provincial submissions for listing of provincial laws, homes for special care and provincially approved agencies in the schedules to the CAP Agreement. There is no indication of any change in the overall volume of submissions in 1985-86.

Figure 9: Provincial Submissions for Listing In the Schedules to the CAP Agreement

Schedule	Annual Average # of Submissions (1982-1984)	Total Number Listed as of March 31, 1984
Provincial Laws (Acts, Regulations, Amendments)	110	1500
Homes for Special Care	525	5360
Provincially Approved Agencies	550	4700

The second major activity of the Directorate relates to consultation and liaison, including meetings of the Continuing Committee of Officials Reporting to Federal/Provincial/Territorial Deputy Ministers of Social Services; orientation and problem-solving sessions with provinces as well as with municipal and non-governmental organizations; development and updating of the policy and procedures manual; broader public information activities through dissemination of cost-sharing guidelines; as well as the ongoing consultation process with provinces. This latter activity has become even more important during the last few years. Early consultation is necessary as provinces develop programs to respond to the present pressures on the social service network and seek to maximize cost-sharing in such programs.

The third activity relates to the review and audit of claims under CAP and VRDP and to the negotiation of final settlements with provinces. In order to settle the large number of outstanding claims and to enable the process to be put on a more current basis, a pilot project to establish a federal-provincial audit and settlement committee was established with British Columbia. It is anticipated that this approach may be used with other provinces.

Persons Assisted Under CAP: CAP expenditures support provincial welfare programs which provide general assistance benefits to an estimated 2 million Canadians and welfare services to approximately 500,000 persons. Because of differences in provincial reporting systems and overlap between programs, the number of persons receiving assistance and welfare services cannot be determined by category of recipient. However, those benefitting from programs cost-shared under CAP include:

- one-parent families;
- mentally and physically disabled persons;

- the aged;
- children who are in care or who are in need of protection because of abuse and/or neglect;
- the unemployed;
- families/individuals in crisis;
- low-income workers; and
- battered women.

Persons Assisted Under VRDP: More than 100,000 disabled persons receive vocational rehabilitation services cost-shared under VRDP. Persons who receive these services include:

- quadriplegics, paraplegics, amputees;
- persons with cerebral palsy or with neurological or muscular ailments such as muscular dystrophy;
- those afflicted with rheumatoid arthritis or other diseases which cause motor impairment;
- the deaf;
- the blind;
- the mentally retarded;
- those recovering from psychiatric disorders; and
- those impaired because of alcohol or drug abuse.

B. Social Development

Objective

To facilitate and promote the development and delivery of innovative and appropriate social services in all parts of Canada; to promote research and the development of expertise in the social welfare field and to promote the ability of people with disabilities to live more independently and become self-supporting.

Resource Summary

The Social Development activity accounts for approximately 0.3 percent of 1985-86 total program expenditures and 18.7 percent of the total person years.

Description

The Social Development activity comprises two components: National Welfare Grants and Social Services Development.

National Welfare Grants This component is the single most important source of funding in Canada for the testing of new concepts and services and the development of human resources within the social welfare field. Grants to national voluntary agencies in the social services field enable the Department to respond to the needs of these agencies and the networks they serve. Two types of assistance are available: contributions which support research, demonstration, human resource development and voluntary action projects; and sustaining grants which support core administrative costs of national voluntary organizations.

National Welfare Grants enable the Department to support the development of improved social services, particularly those aimed at assisting disadvantaged Canadians. (See Figure 12).

Sustaining grants are provided to 26 (1984-85) national voluntary social service organizations whose primary interests are disabled persons, children and families, social policy analysis and development, social welfare services, and poverty. The grants assist these organizations to operate their national offices and to carry out national activities.

National Welfare Grants consultants carry out the mandate of the program by providing technical assistance in project development and project assessment, monitoring approved project contributions and grants, network building, needs analysis and dissemination of information.

Figure 12: National Welfare Grants Project Contributions by Target Population and Sector 1983/84

Primary Target Population/Sector[1]	Number of Projects	$	% of Projects	% of $
Elderly	8	332,758	9	10
Natives	3	217,054	3	7
Children and Youth	11	322,560	13	10
Women	8	303,633	9	10
Disabled	19	524,400	23	16
Families in Crisis	13	592,056	15	18
Development of Human Resources	7	219,054	8	7
Development of Research Organizations	6	371,620	7	11
Projects/Studies on Social Service Systems	11	371,344	13	11
Total	86	3,254,479	100	100

[1]Most of the projects are multi-faceted and could be classified under more than one category (e.g., disabled children, poor elderly, poor women). The categories are therefore not exclusive and represent the main focus of projects. There is no double counting.

During the fiscal year 1983-84, 16 Fellowships were awarded totalling $261,960.

Social Services Development The Social Services Development component provides consultative, informational and promotional services to a wide range of governmental and non-governmental organizations concerned with specific social issues and related social services.

This component enables the federal government to respond promptly to emerging social issues and to play an active role in the development of innovative and appropriate social services for Canadians. Although constitutional responsibility for delivery of social services rests with provincial governments, social issues and problems manifest themselves as national concerns and require appropriate national responses.

Current areas of focus include: family violence, day care for children, interprovincial and international adoption, divorce counselling and family support services, child welfare and youth services, home support services, mutual-aid groups, voluntary action and services to the disabled. A social needs monitoring capability is being developed to provide for the acquisition of timely information related to emerging needs.

Performance Information/Resource Justification

The impact of federal activities on social services development has been significant, but must be judged within the context of provincial, municipal and non-governmental delivery systems as well as changing economic conditions.

Social Services Development has developed and disseminated information and provided consultation and professional services in support of efforts to reduce wife battering and child abuse. As part of this work, it has brought the National Clearinghouse on Family Violence to operational status including involvement in the production of several films and documents, and it was directly involved in the Fifth International Congress on Child Abuse and Neglect. The National Day Care Information Centre worked toward the implementation of the recommendations for action based on the work of the Second Conference on Day Care. It has produced several publications including statistical reports and information booklets related to the safe operation of day care centres. In addition, the centre works closely with national advocacy groups to improve the provision of day care across Canada.

Social Services Development produced a series of pamphlets on Independent Living as well as other information packages to assist the disabled. It also co-operated with the International Labour Organization (ILO) in the sponsorship of conferences and the co-funding of research and development of programmes for the disabled. It continued involvement with the United Nations World Programme of Action Concerning Disabled Persons by working with ILO and the UN in developing a proposal for an international non-governmental organization to respond to requests from international areas for information and project assistance.

Initiatives in 1984-85 have continued in these directions. The issue of sexual abuse of children and youth was addressed through a national colloquium. As part of the International Congress on Social Welfare, there were special programmes on Home Care/Home Support Services, Mutual Aid, International Adoption and Parenting. All of this has contributed to the development and involvement of a direct federal presence among provincial governments, with non-governmental organizations and with the voluntary sector in communities across Canada.

C. New Horizons

Objective

To provide opportunities for retired Canadians to plan, operate and participate in meaningful activities of their own choosing which will prove beneficial to themselves and the community.

Resource Summary

The New Horizons activity accounts for approximately 0.4 percent of 1985-86 total program expenditures and 31.4 percent of the total person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	16,589	88	16,476	89	113	(1)

Description

New Horizons was established under the authority of Cabinet and announced during the summer of 1972 as an experimental program. In December of 1974, Cabinet authorized continuing program status.

New Horizons seeks to alleviate and prevent the pattern of social isolation often experienced by older persons. Contributions are made available for periods of up to 18 months to enable groups of retired seniors to participate in non-profit activities of their own choosing which will be beneficial to themselves and to their communities. To be eligible, a group will normally have at least 10 members, a majority of whom are retired persons. Project groups are encouraged to secure alternative sources of support and funding to enable them to continue their activities past the period covered by the New Horizons contribution.

Through their own efforts, and by the example of their successes, retired Canadians develop new roles for themselves and demonstrate to the public at large their continuing ability to be contributing and vital members of their communities. Project activities supported by New Horizons fit into the following broad categories: sports, fitness and games; socials; arts, crafts and hobbies; historical; service-oriented activities; performing arts and entertainment; media-type activities; educational; organizational development and research.
well-being of older and retired Canadians and establishes a direct federal presence among groups at a grassroots level in communities across Canada.

Performance Information/Resource Justification

New Horizons reflects the federal government's concern for the well-being of older and retired Canadians and establishes a direct federal presence among groups at a grassroots level in communities across Canada.

The target population of New Horizons is made up of retired Canadians, most of whom are over 65 years of age. This group will continue to increase more rapidly than most other population groups. New Horizons has played and will continue to play an important role in providing retired Canadians with the opportunity to maintain an independent lifestyle while contributing their skills and resources to their peers and their communities. The program will continue to emphasize the encouragement and support of groups wishing to develop and participate in service-oriented and self-help projects which provide needed services either for the project members themselves or for groups in the community at large.

Program funds are allocated by electoral district and in proportion to the population of senior citizens. Field representatives in eleven regional offices and sub-offices provide consultation, advice and assistance to groups of retired persons in the development of proposals and the operation of funded projects. Project submissions are reviewed and assessed by headquarters staff and are approved by the Minister of National Health and Welfare 10 times a year. Once approved and funded, projects are monitored and data are gathered to permit ongoing evaluation.

In 1983-84, 1,999 projects were funded under this activity, involving approximately 285,000 participants across Canada. The average contribution per project was $6,553.

In 1983-84, New Horizons increased the number of service-oriented projects funded by 39.7 percent. The original goal for 1983-84 was to increase the funding of these projects by 20 percent.

Figure 15: Change in New Horizons Funding by Activity Category

Activity Category	1982-83 #	1983-84 #	% Change
Sports, Fitness and Games	1000	1021	+ 2.1%
Socials	1009	969	- 4.0
Arts, Crafts and Hobbies	810	765	- 5.5
Historical	180	153	-15.0
Service-oriented	181	253	+39.7
Media	161	155	- 3.7
Performing Arts and Entertainment	140	144	+ 2.9

Organizational	43	59	+37.2
Research	14	8	-42.8
Senior Centre Costs	99	99	0
Total	3752	3712	- 1.1

In 1982-83, New Horizons funded 2,031 projects. In 1983-84, 1,999 were funded. Many projects involve more than one Activity Category.

D. Program Administration

Objective

To provide overall direction and coordination of program activities by providing policy advice and direction, planning, financial and administrative services.

Resource Summary

Program Administration accounts for approximately 0.04 percent of 1985-86 total program expenditures and 13.1 percent of the total person-years.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Administration	1,677	37	2,748	37	2,514	35

Approximately 73 percent of the costs are personnel related. Other costs consist primarily of expenses for communications, materials, supplies and professional services.

Vocational Rehabilitation Research (VRDP)	75,000	75,000	40,083
Young Offenders Agreements	8,000,000	27,500,000	24,333,391
Social Services Development	3,497,000	3,497,000	3,576,444
Summer Canada	-	-	53,075
New Horizons	13,371,000	13,371,000	12,732,528
	4,025,292,000	3,759,144,000	3,395,844,931
	4,028,719,000	3,762,311,000	3,398,376,931

B. Cost Analysis

Net Program Cost

The 1985-86 estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items must also be included when considering the actual costs of operating the Program.

Figure 21: Total Cost of Program for 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Total 1984-85
Total Cost of Program	4,043,664	1,252	**4,044,916**	3,777,999

The adjustments made to the estimated operating expenditures to arrive at a total cost include accommodation provided without charge by Public Works ($1,021) and other services provided without charge by other departments ($231).

C. Additional Information

1. Explanation of Program Change

Since the preparation of the last Program Expenditure Plan the former Health and Social Services program has been divided into two programs: the Health Services and Promotion Program and the Social Services Program. The reasons for this change include:

- These two Programs disburse substantial sums of money in accordance with different legislation on behalf of different clients.

- Eight of the Provinces have separate ministries for health and social services. Provincial liaison is critical in these Program areas and is facilitated by a structure parallel to those in the provinces and territories.

Section I
Program Overview

A. Highlights

The thrusts of the Medical Services Program for 1985-86 are summarized below, with references to the Analysis by Activity section of this document for more details:

- The principal thrust of this Program is to carry out the federal commitment, as expressed in the Indian Health Policy of 1979 (see page 54), to deliver health services to Canada's Registered Indians and Inuit, and to help them attain a health status comparable to that of the rest of Canadians. The Program will also continue to provide, in co-operation with the territorial governments, health services for residents of the Yukon and Northwest Territories. Requirement: $361.3 million, or 89.2 percent of Program expenditures (see pages 24 to 31);

  - Recent initiatives to respond to expressed needs of Indian and Inuit clients reflect the Program's thrust in the areas of prevention and education, for example: the Indian and Inuit Professional Health Career Development Program, the Health Consultation Program (see Initiatives, pages 18 and 19), and the National Native Alcohol and Drug Abuse Program (see Analysis by Activity, page 26).

- The Health Assessment and Advisory Services Activity is another Program priority, addressing the needs of Canadians in areas of environmental, occupational and public health by:

  - providing advisory services to federal departments and agencies on occupational and environmental health issues affecting employees and offering public servants individual health counselling and first aid assistance. Requirement: $17.7 million, or 4.5 percent of Program expenditures (see page 33);

  - preventing the entry of disease-bearing materials into Canada and controlling the dangers of communicable diseases brought into the country by travellers or immigrants; this activity includes a public education component as a service to Canadians travelling abroad. Requirement: $0.7 million, or 0.2 percent of Program expenditures (see page 34);

  - assessing the ability of would-be immigrants to function in Canadian society and providing non-insured health services to new immigrants who are not yet covered by medicare. Requirement: $1.0 million, or 0.3 percent of Program expenditures (see page 34).

- developing the Civil Aeromedical Screening System (CASS) in co-operation with the Department of Transport, pursuing aeromedical research and development, and supporting human factor related aeronautic accident investigations performed by the Canadian Aviation Safety Board (CASB). Requirement: $2.7 million, or approximately 0.7 percent of Program expenditures (see page 35);

- The Program continues negotiations with the provinces for the transfer of Prosthetic Services to these jurisdictions while maintaining present levels of services to meet client demands. Requirement: $2.7 million, or approx. 0.7 percent of Program expenditures (see page 39);

- The Program's Emergency Services pursues its co-operative effort with federal bodies, provincial government departments and agencies, and a number of public and private organizations, to maintain the country's readiness to provide health and social services in the event of a national emergency or disaster. The training component of this activity will continue to be a priority. Requirement: $2.4 million, or approx. 0.6 percent of Program expenditures (see page 41).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Indian and Northern Health Services	349,026	340,011	9,015	24
Health Assessment and Advisory Services	23,124	25,732	(2,608)	32
Prosthetic Services	2,696	2,650	46	39
Emergency Services	2,361	2,352	9	41
Program Administration	13,026	12,094	932	43
	390,233	382,839	7,394	
Authorized Person-Years	3,281	3,224	57	
Revenue	41,500	39,800	1,700	

Revenue is generated through hospital insurance plans, medical insurance plans, cost-sharing agreements with territories/provinces, and sales of prosthetic devices. This revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program.

The increase of $7.4 million in the 1985-86 requirement over the 1984-85 forecast is due to the following major items:

- an increase of $14.9 million for the National Native Alcohol and Drug Abuse Program;
- an increase of $9.4 million or 2.5 percent for price increases, and
- a decrease of $10.2 million due to forecasted supplementary requirements for non-insured health services in 1984-85.

C. Background

1. Introduction

The Medical Services Program plays an essential service delivery role in the Canadian health care system. The most important aspect of this role is to carry out federal policy with regard to Indian and Inuit health services. The Program, in conjunction with provincial, territorial and other health services, provides health care or ensures that it is available to this country's Registered Indians and Inuit to help them reach and maintain a health status comparable to that of the rest of Canadians. The Program also ensures the availability of health services to non-Indian/Inuit residents of the Yukon and Northwest Territories, in co-operation with the territorial governments.

The Medical Services Program serves many other Canadians: Program clients include federal public servants, civil aviation personnel, immigrants and temporary residents, international and inter-provincial travellers, who are served by the Program's Health Assessment and Advisory Services Activity. The Program also has as clients the physically handicapped requiring prosthetic devices. Finally, by maintaining Canada's readiness to handle a national emergency, the Program serves all the residents of this country.

An essential feature of the Canadian health care system is that different levels of government work together to provide the comprehensive and universally accessible health care that makes this system one of the best in the world. Medical Services therefore endeavours to maintain constant and active co-operation with provincial and territorial governments, with the private sector (health professionals and institutions, universities, etc.) and with the Native communities it serves.

This Program also maintains a working relationship with other Programs within the Department of National and Welfare, namely: Health Services and Promotion, Social Services, Health Protection, Income Security and Fitness and Amateur Sport. For example, this Program consults with the Health Services and Promotion Program in areas such as delivery of dental consultative services to its Native clients, evaluation of its alcohol and drug abuse program, occupational health matters and health care facility designs.

There are numerous areas of shared involvement and responsibility between the Medical Services Program and many Departments and agencies within the federal government dealing with the same client groups or geographical areas, in particular:

- Indian Affairs and Northern Development (DIAND): provision of services (by Medical Services) for the monitoring of water supplies and sewage disposal on Indian reserves; interdepartmental consultation on Native housing and health careers, and coordination of community health promotion activities;

- Environment Canada: mutual consultation on environmental issues; inspection and monitoring (by this Program) of food outlets, water supplies and sewage disposal in national parks;

- the Canadian Employment and Immigration Commission: consultation concerning the training of Native people for health careers; with regard to immigrants: provision (by this Program) of health assessment services and non-insured health services (see page 34);

- Agriculture Canada and Transport Canada: mutual consultation on matters related to food supply, cost and availability;

- Treasury Board and the Department of Labour: shared responsibility for Public Service occupational health;

- all federal departments (as clients of this Program): health promotion and environmental awareness program for public servants;

- Transport Canada: advice and assistance (from Medical Services) on aeromedical matters (see page 35);

- Canadian Aviation Safety Board: assistance in human factor related aviation accident investigations (see page 35).

In addition, in the area of emergency health services, the Medical Services Program works in consultation and co-operation with the World Health Organization, the Pan American Health Organization, NATO, the Red Cross, St. John Ambulance, the Privy Council and several federal departments.

Program management actively seeks interdepartmental co-operation to increase program effectiveness and avoid duplication of effort. For example, a study initiated by this Program was completed during 1984 to review and identify the existing role, field resources and Program mandate in the area of environmental health as it affects Native people - in relation to the role, resources and mandate of DIAND and other Departments. A Memorandum of Understanding between the Department of National Health and Welfare, DIAND and Environment Canada was signed in February 1984. Technical working committees have been established in most regions served by this Program to increase its ability to deal more effectively with the environmental health concerns of Native people.

2. Legal Mandate

The Medical Services Program derives its general mandate from Section 91 of the Constitution Acts, 1867 and 1981. Sub-Sections 7, 11 and 24 relate to Prosthetic Services, Quarantine and Regulatory Services and Indian Health Services respectively. The Program also derives an overall mandate from the Department of National Health and Welfare Act.

The responsibility to provide or ensure the provision of health services to Registered Indian and Inuit people was entrusted to the Medical Services Program in 1945 by a Cabinet decision. Further policy decisions have re-affirmed the commitment of the Federal Government to Canada's Native people. The most recent milestone is the Federal Indian Health Policy of 1979. (Please refer to page 54 for the text of this Policy.)

The authority to provide health services to the Yukon and Northwest Territories is contained in a Cabinet decision of 1954.

For the Health Assessment and Advisory Services Activity, authority is derived mainly from the following:

- the Immigration Act and several orders-in-Council;
- the Quarantine Act (1977) (Section 6);
- the Aeronautics Act (Civil Aviation Medicine Services);
- Orders-in-Council 3686 (1945) and 3766 (1952) (Public Service Health).

For other activities, the legislation or authorities administered by the Program include:

- Order-in-Council PC 1965-218 & Cabinet Decision 132-77 (Prosthetic Services)
- Order-in-Council 1305 (1981) (Emergency Services)

3. Program Objective

The overall objective of the Medical Services Program is to "protect and enhance the health of those Canadians whose care, by legislation or custom, is the responsibility of the Department."

4. Program Organization for Delivery

Activity Structure: The 1984-85 Medical Services Program Expenditure Plan was presented on the basis of nine activities. To better reflect the way the Program's human and financial resources are distributed and managed, as well as to group together activities with similar objectives and outputs, the nine activities have been amalgamated into five as follows:

- the previous Indian Health Services and Northern Health Services activities are now amalgamated into one activity: Indian and Northern Health Services;
- four other formerly separate activities, i.e. Public Service Health, Immigration Medical Services, Quarantine and Regulatory Services and Civil Aviation Medicine, are now under the umbrella of the Health Assessment and Advisory Services Activity;
- Prosthetic Services, Emergency Services and Program Administration remain as separate activities.

For 1985-86, the Program Activity Structure of the Medical Services Program is therefore as illustrated in Figure 2 below.

Figure 2: Program Activity Structure

Organization Structure: The Medical Services Program is divided into seven functional areas or directorates, as shown in Figure 3. The Operations Directorate is responsible for the delivery of services to the Program's clients, accounting for 97.5 percent of Program funds. The other directorates provide support services within their areas of specialization: in addition to the Directorates shown in the 1984-85 Medical Services Program Expenditure Plan (Policy, Planning & Liaison, Administration and Finance), three new Directorates will exist in 1985-86: a Personnel Directorate, to manage this function at Branch level, a Directorate of Nursing to help coordinate this important aspect of the Program's activities, and a Secretariat to manage functional programs such as Affirmative Action, Official Languages and others of this nature.

An important feature of the Medical Services Program, both in terms of financial and human resource management, is its decentralization: the delivery of program services takes place at regional level where 87 percent of funds and 87 percent of person-years are channelled. Each of the Program's ten regions is managed locally by a Regional Director.

The regions correspond to provincial and territorial boundaries, except for the Atlantic region which spans all of the Maritime provinces including Newfoundland and Labrador. On the other hand, the Province of Ontario includes two regions: the Ontario Region and the Overseas/National Capital Region. The latter deals mainly with the Public Service Health and Immigration Medical Services components of the Health Assessment and Advisory Services Activity.

The Activities under the responsibility of Regional Directors are:

- all of the components of Indian and Northern Health Services,
- the following components of Health Assessment and Advisory Services:
  - Public Service Health,
  - Quarantine and Regulatory Services,
  - Immigration Medical Services.

The Activities managed from Headquarters are:

- the Civil Aviation Medicine portion of Health Assesment and Advisory Services,
- Emergency Services,
- Prosthetic Services,
- Program Administration.

As of April 1, 1984, there were 623 facilities operated by Medical Services. A list of Program facilities, by type of facility and region, is included in Item E of the Supplementary Information Section, pages 56 to 58.

Figure 3: 1985-86 Resources by Organization/Activity ($000)

	Operations						($000)	
Activity	HQs	Regions	PPL	Fin	Admin	Other	Totals	P-Y
Indian and Northern Health Services	23,980	323,247	1,594	205			349,026	2,567

D. Planning Perspective

1. Environment

Federal programs addressing the needs of this country's aboriginal peoples operate in a rapidly changing social, political and legal environment. The Medical Services Program carefully monitors these changes to remain responsive to the needs of its clients. The change factors which are considered the most important to the Program in terms of future direction and performance are:

Federal Policy on Indian and Inuit Health Services: The Medical Services Program has been carrying on its mission to provide or ensure the provision of health services to Registered Indians and Inuit for four decades. The issues that must be addressed at this time are summarized in one of the conclusions of a government survey of the late 1970s: "health conditions which can be improved by medical care have improved while those influenced by social and living conditions have not." (1) Programs intended to improve the health status of Native peoples therefore face a different kind of challenge than they have in the past. It is in view of this challenge, and to step up the search for new approaches and solutions, that the federal government issued its 1979 Indian Health Policy. (Please refer to page 54 for the text of this Policy.) The Policy proposed three concepts (or "pillars") upon which to base future action to end the tragedy of Indian ill health in Canada:

- community development: socio-economic, cultural, etc;
- the traditional relationship of the Indian people to the federal government, and
- the Canadian health system with its interrelated elements at federal, provincial and municipal (local) levels.

Situating Indian health services within the context of the Canadian health system, the Indian Health Policy underlined the provincial role in treatment services while affirming the federal commitment to public health activities, including health promotion and education, and the detection and mitigation of hazards to health in the environment. This is in keeping with the federal commitment to Native social programs dealing for instance with housing conditions, sanitation, employment and lifestyle. This also has a direct bearing on the future orientation and focus of this Program.

In response to the direction provided by the Indian Health Policy, and to the needs expressed by the Native communities themselves, the Program is already giving greater emphasis to prevention, education and community participation while maintaining treatment services to answer present needs.

---

(1) "Indian Conditions", Department of Indian Affairs and Northern Development, 1980.

The Medical Services Program is also offering assistance and encouragement to other federal bodies and levels of government to improve environmental factors which adversely affect the health status of Indian people.

Another aspect of the Indian Health Policy having an important impact on this Program concerns the need to intensify the process of consultation with Native communities to prepare the way for them to manage their own health programs. Central to the Indian Health Policy is the recognition that only Indian and Inuit communities themselves can change the root causes of ill health among their people. Through a process of interdepartmental consultation as well as active involvement and direct consultation with the client population, this Program is taking specific steps toward administrative transfer. Concrete action includes initiatives such as: the Community Health Demonstration Program (page 29), the Indian/Inuit Professional Health Careers Development Program (pages 18 and 28), the Indian/Inuit Health Consultation Program (page 19), and the Indian and Inuit Health Conference (page 30).

Indian Self-determination: in the political or legal arenas, the factors expected to have an impact on the Program's future include: the outcome of Indian self-government discussions at constitutional (First Minister's) conferences and the Report of the Special Committee on Indian Self-Government (Penner Report).

First Ministers Conference (FMC) on Constitutional Aboriginal Affairs: The last FMC was held in March 1984 with an agenda including equality rights, aboriginal and treaty rights, land and resources, and self-government. This conference laid the groundwork for future discussions on Indian self-government but did not yield results that would immediately affect this Program. However, at the Conference, it was decided that a study be undertaken to review social, cultural and economic programs and services provided to aboriginal peoples. Medical Services formed a task force to ensure the Program's contribution to this project.

Indian Self-Government in Canada: if implemented, the recommendations contained in the Report of the Special Committee on Indian Self-Government (Penner Report) have significant implications for the Program. Studies are now underway in Medical Services to identify options for responding to the movement toward self-government in the health field.

Economic and Employment Development: Unemployment is recognized as one of the main social problems affecting the health of Native people. Over the past few years, there have been many initiatives to develop employment in or near Indian communities. For instance, a $345 million Native Economic Development Program announced in 1984 by the Department of Regional Industrial Expansion will bring much needed employment but will also create rapid change in Native communities. Certain health-related factors, such as the lack of physical conditioning of workers after a long period of idleness and other occupational health issues, may need to be taken into account. Medical Services recognizes a need to coordinate these programs with health education and prevention and to assist Indian communities in their need for occupational and environmental health services.

Political development in the North: The 1954 Cabinet Decision giving Medical Services the reponsibility for delivery of health care to residents of the territories stated that once territorial governments showed a desire, and had developed the necessary expertise, responsibility for health care delivery would be transferred to them. With the impending settlement of land claims in the Yukon and the provision of services by one government, that is, the Yukon Government, the way will be open to allow the Program to transfer health services as a total package to the Territorial Government. Medical Services is presently considering the financial and human resources implications of this transfer.

Although the Program may continue to deliver some services to the Yukon under contract, this arrangement would be at the request of the Territorial Government and the Central Indian Authority.

In the Northwest Territories, the Government has opted to take responsibility for health care in stages. The Medical Services Program still delivers most health services in N.W.T., including treatment services to Native communities and preventive services to all communities. The Territorial Government provides funding for hospitalization, medicare, and some health promotion projects in cooperation with the Medical Services Program. In addition, the Territorial Government operates hospitals in Yellowknife and Fort Smith and in 1982 assumed responsibility from the Federal Government for the Baffin Regional Hospital (Frobisher Bay General).

To accommodate the changes that are taking place in the status of the territorial governments, the Medical Services Program must review its role in direct service delivery as well as the residual role it may have after the transfer of responsibility for health care programs is completed. The questions of mandate and funding mechanisms also need to be addressed as the eventual impact of the present changes will be to remove the Program's presence from the Territories.

2. Initiatives

The following projects represent new endeavours which will allow the Medical Services Program to respond to changes in its operating environment and better serve its Native client population:

Indian and Inuit Professional Health Careers Development Program: Professional health career development is the priority component of a four-part strategy being developed by the Program to coordinate the education and training needs of the Indian and Inuit people in this field. The purpose of this initiative is to help correct Indian and Inuit under-representation in the health professions and answer the need of Native communities to receive quality health care from people of their own culture. In addition to professional health career development, the other components of this project are: Para-professional Health Career Development, Indian/Inuit In-Service Development and Training, and Community Health Dynamics. Resource allocation for 1985-86: $2.9 million and 28 P-Ys. For more details see page 28.

The Indian/Inuit Health Consultation Program: To facilitate client dialogue and involvement, the Medical Services Program provides resources for health liaison programs in each of its nine Program Regions providing Indian and Inuit Health Services. In 1984-85, the cost of this program was $87,500.00. In addition, since 1980 the Branch has provided an additional $1.027 million per year in contribution agreements specifically for client consultation on health issues.

Directorate of Nursing Services: Medical Services established an organizational unit to improve the Program's capacity to coordinate, promote and monitor the health services provided to its clients. Resource allocation for 1985-86: $300,000.00 and 8 P-Ys.

Dental Health Records: A standardized reporting and recording system of dental procedures and accounts is being developed and is expected to be implemented in all regions served by the Program. This represents an effort by the Medical Services Program to enhance the efficiency and effectiveness of management systems in the delivery of health services to its clientele. Operating costs for all regions in 1985-86 : $90,000, plus 18 P-Ys.

Northern Manitoba Flood Agreement: This agreement was signed in 1977 and set out a compensation program to the status Indians affected by the impact of the construction, by the Province and Hydro, of a major hydro generating scheme in Northern Manitoba. The Medical Services Program will be carrying out part of the federal commitment to this agreement by providing environmental assessment and advisory services to the Indian bands involved.

In the Health Assessment and Advisory Services Activity, two initiatives will address environmental and occupational health concerns of federal employees:

Public Service Health: Increased resources (6.2 million and 128 P.Y's for 1985-86) will allow this Activity to extend its health protection services to federal public servants in occupations and locations not previously served by the Program. This initiative will require the development, by Medical Services, of an ongoing training program for health professionals in occupational health, and of educational programs for public servants in general. For more details see page 36.

Medical Mini-Clinics Abroad: This Public Service Health initiative is a two-year pilot project to set up ten mini-clinics for public servants working at hardship posts abroad. These mini-clinics will offer primary prevention programs as well as more comprehensive clinical and treatment services. Estimated cost for 1985-86: $118,050.00.

3. Program Effectiveness

Health statistics, such as the reduction in premature death, show that the Program has contributed to the improvement of the health status of its Native clients through the control of the main pathological causes of mortality.

According to the World Health Organization, the infant and perinatal death rate is one of the most significant indicators of the health status of a population and of the effectiveness of its health care system. Prior to 1960, the neonatal and perinatal death rate among Canada's Native people was comparable to that of many 'developing' countries. Through a major effort directed at mother and child health, this Program helped to reduce this rate to less than a quarter of what it was in 1960, rapidly closing the gap between the Native and Canadian rates.

Figure 4: Infant Mortality Rates (Registered Indians served by the Medical Services Program and Canada 1960-83)

Notes: - In 1970, infant mortality figures were not received from all regions, therefore the rate is low.
- 1983 rate for Canada not yet available.
- Source: Statistics Canada. Source of Indian/Inuit data is Medical Services Program in-house figures.

Morbidity and mortality rates from pathological causes such as tuberculosis, diseases of the respiratory system and infectious diseases were also alarmingly high two decades ago. One of this Program's major accomplishments was to bring these under control so that Indian rates would be approximately the same as the rates for all of Canada. The decline in the death rate from diseases of the respiratory system is a typical example (see Figure 5, next page).

Figure 5: Indian Deaths from Diseases of the Respiratory System, 1974-1982

Source: Statistics Canada.
Source of Indian/Inuit data is Medical Services Program in-house figures.

While Medical Services has been successful in improving the health status of Native people on several fronts, other statistics indicate the challenge still facing the Program. The most revealing statistic in this regard is mortality due to injury and poisoning (Figure 6, next page), which remains three to four times higher than among the Canadian population. It accounted for one third of all Indian deaths in 1982 and is the principal cause of mortality of Native people in the Prairie, Pacific and Yukon regions. Medical Services activities designed to address this situation are in the area of prevention and education, for instance the National Native Alcohol and Drug Abuse Program (see page 26).

The second most important cause of Indian death is from circulatory (cardiovascular) diseases. Traditionally, this rate had been much lower among Native people than among the rest of the Canadian population. But this is now the principal cause of sickness and mortality among Indians in the eastern regions and the Northwest Territories, indicating that the stress-related problems of the modern lifestyle are having an impact on Native people, and that Medical Services must address this problem both in terms of prevention and treatment services.

Overall, Native people still die at a much younger age than the rest of the population of this country, as indicated in Figure 7, next page. This shows the considerable challenge ahead for programs designed to help Canada's indigenous people bridge the health status gap that exists between them and the rest of Canadians.

Figure 6: Major Causes of Death, Indian and Canada, 1981

Figure 7: 1982 Age-Group Specific Death Rates, Indian* and Canada**

Specific program effectiveness issues arise for the Medical Services Program in relation to the implementation of the Indian Health Policy. An internal Matrix Group is actively analyzing the Policy to identify issues requiring particular attention, assess their implications for the Program, and enlist the assistance of DIAND, other federal departments, provincial authorities, and most importantly, of the Native communities themselves in developing and implementing action plans. Two issues of immediate concern are:

The provision of non-insured health benefits: non-insured health benefits include: transportation for medical reasons, prescription drugs, eyeglasses, dental care, prostheses, and, where applicable, medicare premiums and user fees. These benefits are extended to all Indians and Inuit regardless of place of residence (on or off reserve) or ability to pay. Expenditures for non-insured health benefits have increased from $31 million in 1977-78 to $96.5 million in 1983-84.

Health care delivery indicators: the Program is developing ways to assess the level of services that must be provided to meet Program objectives and Cabinet policies, such as the Indian Health Policy. Such indicators will represent a yardstick to measure Program results, analyze costs and allocate resources.

Section II
Analysis by Activity

A. Indian and Northern Health Services

Objective

To assist Indians, Inuit and other eligible Canadians, and residents of the Northwest and Yukon Territories, to attain a standard of health comparable to that of other Canadians.

This objective is complemented by the current Federal Indian Health Policy. See pages 54 and 55 for the text of this document.

Resource Summary

The Indian and Northern Health Services activity accounts for 89.4 percent of the total program expenditure and 78.2 percent of the total number of person-years.

Figure 8: Activity Expenditure ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Description

This activity ensures the availability of, or the access to, health services for the Inuit and registered Indian population of Canada by maintaining a program with the following elements:

- essential treatment services in isolated communities;
- community preventive health programs (e.g., health education, environmental health, nutrition, dental hygiene, school health, alcohol abuse programs); and
- individual primary health care (e.g., maternal and child health clinics, home visiting, dental therapy, communicable disease control).

The direct delivery of health services by Medical Services represents only 15 percent of the total health benefits offered to Native peoples through this Program. The most substantial proportion of services is ensured through contractual arrangements with private practitioners, University Faculties of Medicine, work sharing arrangements with other levels of government and, increasingly, programs run by the Native communities themselves.

The sub-activities of Indian Health Services are:

Community Health Services: The Community Health Services sub-activity is designed to provide consultative, advisory and technical health services to Indians and Inuit residing in the provinces. These services include:

- the delivery of preventive health programs through nurses, environmental health officers, dental therapists, health educators, nutritionists, Community Health Representatives and other health personnel. These programs are designed to promote a healthy community by running well baby clinics, offering immunization services and nutrition counselling and promoting other practices that will enhance general health;
- the provision of treatment services by medical professionals (either on staff or under contract) and by nurses and other trained personnel for emergency treatment and appropriate referral as necessary for either in-patient and out-patient services;
- the training of nurses and other health personnel to prepare them for service at isolated outpost stations. In addition to diagnostic services, nurses provide a full range of community health programs, stressing prevention of illness and promotion of health;
- the training of Community Health Representatives (CHRs) to conduct health promotion and liaison activities, for instance: to assist the community in identifying health care needs, to run health education activities, help people in the proper utilization of available health care services, and provide basic treatment and preventive services when

there is no nurse or doctor. A Community Health Representative is a person from the community who works with the community and to whom anyone may come for assistance. (See CHR evaluation report, pages 29-30);

- the provision of mental health programs implemented by either Medical Services personnel or through community-based programs supported by Program contributions; and

- the provision of information and education services in support of community health services, educational programs, staff development and media production.

The National Native Alcohol and Drug Abuse Program (NNADAP): The National Native Alcohol and Drug Abuse Program supports Indian and Inuit people and their communities in establishing and operating programs aimed at arresting and offsetting high levels of alcohol, drug and solvent abuse. Project approval is decided on the advice of Regional Advisory Boards composed of Indian, Inuit and Government representatives. At the national level, a National Advisory Board advises the Minister and program officials on policy, and operating issues. Sub-committees of the National Advisory Board include the Executive Committee, Appeals Committee, Research and Development Committee and the Training Committee. The immediate goal of this program is to test and evaluate a variety of approaches to the problem in order to establish a firm basis for an ongoing program run by the Native peoples themselves.

This sub-activity includes:

- disseminating, through various community awareness programs, information on alcohol and drug/substance abuse; promoting responsibility in the use of the substances and alternatives to their usage and assisting, through counselling, substance abusers and high-risk groups to maintain sobriety;

- providing training of NNADAP-sponsored community project staff in order to have qualified personnel available to deliver the program;

- funding in-patient and out-patient facilities to offer counselling and rehabilitation services during the withdrawal and rehabilitation process, including planned monitoring or continuing treatment on an after-care/follow-up basis. Examples of such facilities are New Dawn Valley Centre in Fort Qu'Appelle, Saskatchewan and Pedahbun Lodge in Toronto. An example of out-patient services is the project run by the Native Alcohol and Drug Abuse Counselling Association in Eskasoni, Nova Scotia; and

- carrying out applied and pure research studies intended to increase knowledge of alcohol and drug/substance abuse problems and effective responses.

Dental Health: The goal of the dental health program is to ensure that all Indian and Inuit people have access to and can receive the same level of dental care services, including treatment, prevention and education, as do all other citizens living in the same geographical areas.

This sub-activity is designed to conduct preventive care and education programs aimed at creating a greater awareness, particularly with school age children, of the benefits of oral hygiene. Diagnostic and examination services, emergency dental treatment and annual preventive fluoride programs are provided by program staff and by the staff of several universities which have been contracted for this purpose.

An important aspect of the dental health program is handled by dental therapists, who are trained at the National School of Dental Therapy in Prince Albert, Saskatchewan. These dental auxiliaries, working under the direction of a dentist, receive two years' training after Grade 12, and provide preventive and treatment services directed mainly at the school age population in isolated communities and reserves across Canada. Native people are encouraged to take this training and work in their communities to promote dental health.

Environmental Health and Surveillance: Housing, water supply, waste disposal, insect and rodent control are among the many factors which affect the health status of a community and for which careful monitoring on a regular basis is essential.

Also, with the advent of resource development in different parts of the country, a whole new area of concern for individual and community health has arisen. Since it is difficult, if not impossible, to remove environmental contaminants such as mercury and PCB's, there must be ongoing educational efforts to alleviate the effect of these contaminants on health. This education must not only be relevant with regard to the problems it addresses, but it must also relate to the cultural background of the people concerned and to possible solutions, such as the availability of alternate food sources.

This sub-activity includes the following functions:

- monitoring environmental conditions in Indian and Inuit communities;
- establishing a health data base on environmental conditions in communities prior to the implementation of projects which could potentially have an impact on the environment;
- increasing awareness and concern among Native people for environmental conditions; and
- implementing a broad range of environmental controls, approaches, strategies and plans to safeguard client groups. These include environmental inspections of communities, water sampling, monitoring of contaminants, collection of data, training of operators, and educational programs in the community.

Hospital Services: The Medical Services Program runs eight general hospitals: one in each of the Territories in Whitehorse and Inuvik and six located in four of the provinces: Moose Factory and Sioux Lookout in Ontario, Norway House and the Peguis Reserve in Manitoba, Fort Qu'Appelle in Saskatchewan, and on the Blood Reserve in Alberta. Although originally established to serve Native Canadians, hospital services are available to anyone in need and they are linked to provincial health care systems. The Program ensures the implementation of the standards of the Canadian Council on Hospital Accreditation and maintains financial control systems for hospitals and treatment facilities. The hospitals were subjected to an exhaustive operational review in 1983-84. Correction of discrepancies and problems are being addressed.

There is great variation among hospitals maintained under this Program in terms of size, complexity, range of services offered. For instance, a hospital such as Moose Factory General offers a complete array of diagnostic services, as well as medical, surgical, pediatric and obstetric care. Going from general to cottage hospitals to nursing stations, the range of services diminishes with size. Cottage hospitals and nursing stations may have as few as two beds and will offer treatment for uncomplicated illnesses, with limited diagnostic services. All hospitals provide in-patient and out-patient services.

The pattern of medical staff arrangements also varies widely. Many hospitals are staffed under contracts with University Medical Schools, some are staffed with Departmental medical officers, and some by private practitioners. Many of the hospitals serve as administrative and logistic bases for outreach activities, including medical visitation, pharmacy and maintenance services. The Program seeks and promotes local and Native involvement on Hospital Advisory Boards.

Activity Administration: The Activity Administration budget for the Indian and Northern Health Services Activity includes, this year, the development and implementation of a key initiative: the **Indian and Inuit Professional Health Career Development Program,** which was approved by Cabinet during 1984-85. This initiative is managed by the Indian and Inuit Health Policy Division of the Policy, Planning and Liaison Directorate, and a small organizational unit is being set up within the Directorate and in the Regions.

The objective of the Indian and Inuit Professional Health Career Development Program is to encourage and support Indian and Inuit participation in educational opportunities leading to professional careers in the health field, and provide a learning environment designed to overcome many of the social and cultural barriers that currently inhibit the Native student's educational achievement. The successful attainment of this objective will, in the long term, help to correct Indian and Inuit under-representation in the health professions and enhance opportunities for Native people to receive quality health care from people of their own culture.

This program will deal with the following areas: health career promotion, cooperative post-secondary programs, career-related summer employment, secondary school science upgrading, health science student scholarship program, summer institutes, university and community college student support, community professional health career initiatives, nursing and nursing assistant programs.

The Indian and Inuit Professional Health Career Development Program is one of four Native education and training initiatives which Medical Services intends to pursue. The others, to be developed in the future, are:

- Para-professional Health Career Development,
- Indian/Inuit In-service Development and Training,
- Community Health Dynamics.

Performance Information/Resource Justification

Performance criteria for the Indian and Northern Health Services Activity are based on providing clients with access to health services which are continuous, accessible, equitable, acceptable and cost-effective.

The linkage between resources and results for this Activity is based on the following measurable effects:

a decrease in morbidity and mortality,
a decrease in accidents and violence,
an awareness of the importance of health and well-being,
reduced dental disease and tooth loss,
an improved level of environmental health services,
an increased recovery from illness and/or injury.

The Program is in the process of developing Health Care Delivery and Management Services indicators to measure the extent of achievement of results and relate these to resources. Meanwhile, the statistics on the reduction in Indian mortality from conditions responsive to treatment services, as provided in the Program Effectiveness section of this document (pages 20 to 23), are convincing performance indicators for this Activity.

Furthermore, the evaluation of two components of the Indian and Northern Health Activity was undertaken or completed during the past fiscal year:

- the Community Health Demonstration Program, started two years ago and extended through this fiscal year, is designed to help Indian and Inuit communities gain experience in running community-administered health programs. Thirty-one projects across Canada, involving some seventy-one Indian Communities, have been undertaken so far. A considerable data base of information is being compiled and forms the basis of an ongoing evaluation focusing on the concerns and issues to be addressed by this Program.

- the Community Health Representatives program, for which a formal program evaluation was completed in 1984-85. As explained above (page 24) CHRs are selected from within the local community, and are trained to provide basic health care and instruction, and to encourage Native

involvement in the development and delivery of health care services within their communities. From its planning in the 1960s, through its implementation through the 1970s, the program now provides services to 76 percent of Native communities which contain 82 percent of Indian and Inuit peoples.

Relevant findings of the evaluation indicated that:

- CHR activities are consistent with and supportive of the mandate and activities of the Medical Services Program;

- there is still a crucial need for basic health services and education as provided by the CHRs;

- the CHRs remain in their positions on average twice as long as Program nurses and thus ensure a greater continuity of care within their communities;

- CHRs enjoy the confidence of the community and are perceived as the providers of services in the absence of nurses and environmental health officers; and

- Band chiefs and Program staff report that basic health services are more available in communities with CHRs, that such communities are better able to follow medical advice and are more involved in the identification of the need for health care, and in the development and delivery of services.

An outcome of the consultation process, emphasized by the Indian Health Policy, was the **Indian and Inuit Health Conference** held in Hamilton, Ontario at the end of 1983. This also represented the implementation of a recommendation made by Justice Thomas Berger in his 1980 Report on the Advisory Commission on Indian and Inuit Health Consultation. The conference was funded by the Medical Services Program and administered by the Assembly of First Nations. There were several hundred Native participants, and there was good representation from Native health care organizations. Participants from Medical Services included senior managers from Headquarters as well as program delivery staff from the Regions. A conference report containing recommendations is presently under study by Native organizations and the Program.

Key program development goals for this Activity in 1985-86 include:

- a report is to be produced, outlining issues in health promotion in Indian and Inuit health for the guidance of program planners (government and non-government) at central, regional and local levels;

- a health promotion strategy is being developed to advocate health by any combination of educational, organizational and economic interventions, in order that personal health practices and environmental

conditions conducive to health be valued, supported and adopted by individuals and by the community;

- a training program for Environmental Health Technicians is being developed to encourage Native capability and interest in environmental health activities and to build an infrastructure for future community participation in this area;

- the mandate of the Program's research unit (which will be moved to Ottawa from Edmonton) is to be broadened to include matters pertaining to Indian and Inuit health, disease control and service delivery all across Canada;

- a concentrated attack on measles and, in the north, hepatitis B will highlight the communicable disease control program;

- a more comprehensive and accessible statistical base will be developed to better serve the needs of researchers and planners, managers and evaluators, government agencies and Indian and Inuit health boards;

- recognizing the increasing importance of cardiovascular diseases which are now the main cause of death in eastern Provinces, health promotion efforts will be directed to the reduction of smoking, obesity and inactivity and to the early detection and prompt and continuing treatment of high blood pressure.

B. Health Assessment and Advisory Services

Objective

To counsel federal public servants and Canadians travelling abroad on matters affecting their health and to advise federal government departments and agencies on the health and physical competency of federal public servants, civilian air crews and prospective immigrants, and on matters which can affect the health of other Canadians.

Resource Summary

The Health Assessment and Advisory Services accounts for 5.9 percent of the total program expenditure and 13.9 percent of the total number of person-years.

Figure 9: Activity Expenditure ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

	23,124	457	25,732	444	20,663	353

Description

This activity is the result of the amalgamation of four former Activities, as were described in the Medical Services Program Expenditure Plan of 1984-85:

- Public Service Health
- Immigration Medical Services
- Quarantine and Regulatory Services
- Civil Aviation Medicine

These aspects of the Medical Services Program were brought under the umbrella of a single activity to facilitate the coordination of Program resources and expertise on matters of environmental and occupational health. The Health Assessment and Advisory Services Activity now serves the overall purpose of providing medical advice, counselling and assistance to fulfill the Program mandate towards public servants, immigrants, civil aviation personnel and the travelling public, under the following sub-activities.

Public Service Health: This sub-activity is an occupational health program for the Public Service of Canada under authority delegated to the Department of National Health and Welfare by the Treasury Board. Its purpose is to promote occupational health and safety and provide health services designed to ensure the health and well-being of all federal employees, regardless of location, and to minimize the incidence of work-related illness. In 1983-84, there were 76 Public Service Health facilities across Canada, and 22 overseas.

The main components of this sub-activity are:

Medical Examinations: these include pre-employment and periodic examinations for selected occupations or environments, examinations at the request of the employer or employees for special reasons, and examinations related to the Public Service Superannuation Act. Examinations are carried out by nurses when the requirements are within their field of competence, but otherwise by physicians. At places where there are no Medical Services Program clinics, examinations are conducted by designated private physicians. Assessments may also be made by medical officers of the Department of National Defence or the Correctional Service of Canada.

Counselling and Advisory Services: These services may be provided by physicians, nurses or other health specialists. They include advice to management on employee health and on the placement of the permanently or temporarily handicapped and disabled; counselling services for employees in a variety of health-related areas; the Employee Assistance Program, which addresses drug and alcohol-related problems, and consulting services to all federal departments on matters relevant to the health of public servants.

Environmental Surveillance: This service is designed to help maintain a safe working environment. This is achieved either by the regular inspection of workplaces or by responding to requests when unsafe working conditions are suspected.

Emergency Treatment and First Aid: Although the primary role of the occupational health nurse on the Public Service Health staff is to conduct a preventive program, emergency care is also a necessary part of this sub-activity. In addition to responding to emergencies, the staff offers advice and assistance with regard to departmental first aid programs.

Quarantine and Regulatory Services: Programs to prevent the importation of diseases into Canada have been in effect since the early eighteenth century. In early days, ships and passengers arriving in Canada introduced many infectious diseases which threatened the survival of new settlements. Crews and settlers were required to have quarantine clearance before moving about the country. Today, the Quarantine and Regulatory Services sub-activity performs this inspection service, both for national and international requirements. Quarantine officers apply the Quarantine Act and Regulations at all major ports of entry, in accordance with Articles laid down by the World Health Organization (WHO) in the International Health Regulations. This is to ensure maximum security against the spread of infectious diseases by ensuring the monitoring of conveyances and people crossing national and provincial borders.

Foreign vessels and international aircraft are subject to inspections by Quarantine staff for evidence of rat infestation and validity of required certification when indicated. Flight kitchens catering to national and international carriers, as well as potable water supplies to aircraft, vessels, interprovincial trains and buses are subject to examination. Legislation provides authority to inspect, examine and, if necessary, detain international passengers and carriers entering Canada so that the risk presented to public health can be determined and assessed.

Immigration Medical Services: Under the Immigration Act of 1976, immigrants to Canada are required to undergo a medical examination in the country of application. This examination, conducted by a designated local physician, includes laboratory tests and a chest X-ray. The medical examination report is then reviewed by National Health and Welfare Medical Officers who are located at 14 posts abroad and in a number of locations in Canada. This Program's Immigration Medical Services provides the Canadian Employment and Immigration Commission (CEIC) with an individual assessment on each applicant, and also on certain categories of visitors, students and workers entering Canada. The health status assessment evaluates whether a condition poses: (a) a danger to the health of the Canadian public, (b) a potential excessive demand on health or social services, and (c) the risk of ill individuals not being able to support themselves.

The Immigration Health Services sub-activity also assists newly arrived immigrants or refugees with their medical expenses until they can qualify for medicare coverage in Canada. Hospital or physicians' expenses, as well as emergency dental care and prescription drugs are paid for by this Program for persons identified by CEIC as eligible for such assistance.

Civil Aviation Medicine: The medical examination and fitness criteria for the licensing of civil aviation pilots, flight navigators, engineers and air traffic controllers are defined by the International Civil Aviation Organization, of which Canada is an active member. The Civil Aviation Medicine sub-activity is responsible for the interpretation and application of agreed standards in respect to Canadian civil aviation personnel licenced by the Department of Transport (DOT). Since the flight environment is basically hostile to man, there are a multitude of medical, psychological and physiological aspects pertinent to the federal civil aeronautics regulatory task that require aviation medicine study and advice.

In its advisory role with the Department of Transport, the Civil Aviation Medicine sub-activity assesses medical fitness of civil aviation personnel, updates medical standards, and supports the Aviation Safety Program, a DOT priority which includes the review of accident data, safety lectures and seminars, and passenger safety.

Since the mandate to investigate aviation accidents now rests with the recently established Canadian Aviation Safety Board (CASB), the Medical Services Program's role in this area is presently in support of Board activities, particularly in investigating human factor related cases. This will also allow for essential input by this Program in monitoring and developing medical standards for the aviation industry.

A thrust for the Civil Aviation Medicine sub-activity is in the area of research and development. As the aviation industry changes very rapidly, the need for aeromedical data to formulate a Canadian air transport policy makes it necessary to perform or contract out research and development work, and to have access to knowledge from other countries. A new National Advisory Committee on Research and Development, composed of members from DOT and representatives from various sectors of the aviation community, has been formed to relate research and development to operational needs. For instance, recent technological advances in the aviation industry have resulted in the development of the modern high-performance jet aircraft, the state-of-the-art electronically-equipped cockpit, and the intricate modern air navigational network, leaving man the weakest link in the entire aviation system. The Medical Services Program will assist the Committee in the area of research into human factors, in a co-operative effort to help Canada meet the challenge of answering the safety needs of the aviation community and the travelling public.

Performance Information/Resource Justification

Public Service Health: The goal of this sub-activity for 1985-86 is to continue delivering health services to federal public servants, at a cost of $17.8 million and 346 person-years.

Last year's Estimates indicated that the Public Services Health sub-activity was in some difficulty owing to a reduction in resources coupled with increased demands. An increase of 147 person-years and $7 million, effective in 1985-86 and spread over three years, will allow areas to be served that have not previously been served, will reduce the strain on a number of seriously overworked employees and will permit levels of service to be achieved that more nearly reach the standards set by Treasury Board. Medical Services Program is developing plans to use these additional resources to provide a more complete and effective occupational health service to employees in the Public Service. Figure 10 below provides examples of the environmental surveillance aspect of this sub-activity.

Figure 10: Examples of Hazardous or Potential Hazardous Workplaces in the Public Service of Canada

WORKPLACE	SELECTED HAZARDS	INVESTIGATIONS
Printing shops	Noise Solvents	Noise measurement Air Sampling and Analysis (ASA)
Welding shops	Fumes (vary with materials used)	ASA, ventilation studies
Laboratories	Toxic chemicals, wide variety Micro-organisms	ASA, ventilation studies
Ships	Noise Climate	Noise measurement N/A
Office buildings	Air quality	ASA, ventilation studies
Cafeterias	Food poisoning	Inspection, sampling
Air traffic control centres	Air quality Lighting Noise	ASA, ventilation studies Measurement Measurement
Miscellaneous	Asbestos	Assessment, sampling

Quarantine and Regulatory Services: The rapidity of travel and increasing capacity of air transport facilitates the spread of disease across the country and around the world and reinforces the requirement for a sound monitoring and health intelligence system. At the present time, attention is focussed on the detection of diseases targeted by the WHO such as Yellow Fever, Cholera and Plague, and several highly infectious tropical diseases. A contingency plan for the containment of these diseases relies on close provincial and federal cooperation. For example, in the transportation of suspect cases to the National Defence Medical Centre in Ottawa, the Program provides isolator equipment at major international airports.

The number of Canadians who travel internationally is increasing year by year. Public education is an on-going task and an ever greater challenge. To help Canadians become aware of travel health hazards and thus minimize risk by practicing primary prevention, the Program conducts information and immunization activities. Literature is provided free of charge, and so is Yellow Fever vaccination offered at 41 designated vaccination centres across Canada. It is important that the publications used in this activity be kept current. Three booklets which must be updated each year are: "Keeping Healthy in Warm Climates", "Malaria Risk Countries" and "Immunization - A Guide for International Travellers".

Immigration Medical Services: Figure 11 below provides an overview of the number of medical examinations and assessments that took place between 1977 and 1983. The number of assessments and examinations forecast for 1985-86 is unlikely to exceed 150,000 due to a reduction in immigration levels.

During 1981, significant changes in medical standards were introduced. They now reflect current Canadian criteria for the assessment of pulmonary tuberculosis and screening for parasitic diseases, and their implementation is a priority of this sub-activity. These, and other changes to streamline medical examination procedures are the result of ongoing review of the clinical assessment process.

It is difficult to predict future trends affecting workloads since they are dictated by economic and political events, especially those creating refugee movements, which influence the increase or decrease in immigration levels.

Figure 11: Immigration Medical Examinations and Assessments by Region, 1977-1983

Region	1983-84	1982	1981	1980	1979	1978	1977
Yukon	-	-	-	-	-	-	-

Overseas	116,680	142,059	187,710**	194,487	170,209	112,812	123,508
Total	138,878	164,823	215,835	218,807	195,568	134,650	150,877

* Figures are not applicable as examinations and assessments for this region conducted by Overseas and National Capital Region

** Includes 1,046 Canada-based assessments

Civil Aviation Medicine: Specific goals for 1985-86 include:

- **the completion of a computer assessment system for the screening of air personnel medical examinations. The cost for this system will be borne by Transport Canada while the Civil Aviation Medicine sub-activity will contribute two person-years; and**

- **the expansion of aeromedical training of flying personnel in line with the recommendations made by the Commission on Aviation Safety (the Dubin Commission), and the development of a modus operandi with the new Canadian Aviation Safety Board, which was also formed as a result of the recommendations of the Dubin Commission.**

The recommendations made by the Dubin Commission, and since then adopted by the government, require a number of adaptations to a new environment. One of those recommendations requires the incorporation of basic aeromedical training in the training syllabi for all pilots. It is the Civil Aviation Medicine sub-activity which is responsible for the contents of this training, as well as the actual instruction process.

Besides this new type of instruction, the ongoing task of conducting safety support lectures and training seminars for medical examiners must be pursued actively. Handbooks must be written, revised and updated. The success of the computerized assessment system will depend upon this activity.

In 1983 there were 81,602 civil aviation licenses and permits requiring medical examinations in Canada. This is the second largest number in the world and it is expected to increase in 1984. The question of fitness to hold the license is answered by more detailed review in 20 percent of these examinations and 6 to 10 percent have medical conditions requiring more extensive investigation. In addition to this, the nature of the pilot's task, which changes with advancing aviation technology, and the improvement of medical diagnostic techniques, which means continuous study of medical standards and their interpretation, are factors affecting program workload. A key concern for the future, therefore, is the retention, development and possible expansion of a staff of trained and experienced Aviation Medical Officers capable of anticipating, recognizing and responding to the inevitable changes taking place in the aviation industry.

C. Prosthetic Services

Objective

To provide prosthetic and orthotic services to disabled veterans and other persons in need.

Resource Summary

The Prosthetic Services Activity accounts for 0.7 percent of the total program expenditure and 1.9 percent of the total number of person-years.

Figure 12: Activity Expenditure ($000) and Person-years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Prosthetic Services	2,696	62	2,650	62	2,703	59
	2,696	62	2,650	62	2,703	59

Description

The Prosthetic Services Activity attains its objective by rehabilitating physically handicapped veterans as well as all other handicapped Canadians who prefer government services over private services. Such rehabilitations demand the provision of custom-made, medically prescribed prosthetic and orthotic appliances and other devices. Each device must be custom-made to ensure a proper fit and allow the client to lead a normal life by alleviating discomfort. The Prosthetic Services Activity is further responsible for ensuring that needed appliances are properly manufactured, processed, warehoused and distributed with the least delay.

Through training and consultation programs, and by providing the appropriate devices, the Prosthetic Services Activity attempts to maximize the rehabilitation and minimize the physical and psychological discomfort of physically handicapped Canadians.

Performance Information/Resource Justification

The federal government is conducting negotiations to transfer the Prosthetic Centres, where patients are fitted and where repairs take place, to provincially-sponsored organizations. A smooth transfer is necessary to ensure that the patients will receive continuing service.

The transfer of Prosthetic Services Centers to provincial authorities has now been completed in Toronto, Ottawa, Halifax, Regina, Calgary and Edmonton.

While the aim is to complete the transfer process by 1988-89, slow progress in the dialogue with provincial governments makes the realization of this goal uncertain.

Figure 13: Prosthetic Services Clients 1979-80 to 1983-84

1979-80 - 23,153
1980-81 - 18,360
1981-82 - 15,615
1982-83 - 8,635
1983-84 - 7,200

This illustrates the decline in numbers because of transfer of services to four provinces. At the same time, a slight shift from private to government services has been observed.

The forecast for 1985-86 projects the fitting of approximately 7,000 prosthetic appliances and orthotic devices, including orthopaedic footwear, to meet client demands.

D. Emergency Services

Objective

In collaboration with other levels of government, to ensure the provision of health and welfare services under national emergency conditions.

Resource Summary

The Emergency Services Activity accounts for 0.6 percent of the total program expenditure and 0.9 percent of the total number of person-years.

Figure 14: Activity Expenditure ($000) and Person-years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Emergency Services	2,361	30	2,352	30	2,332	29
	2,361	30	2,352	30	2,332	29

Description

The Emergency Services Activity is responsible for coordinating and maintaining the capability to provide health and welfare services in a national emergency and for assisting provinces in planning, organizing and operating services to meet the needs of people in potential peacetime and wartime disasters. This Activity is also responsible for advising on emergency policy, national operations, and for coordinating activities related to national and international emergency issues.

In view of the increased awareness of possible disasters, provincial governments are making greater demands for training courses and assistance in planning emergency procedures. This has necessitated doubling the number of courses as compared to previous years. The need to establish close liaison with senior officers of other Departmental programs and to set up briefing seminars to outline their responsibilities in time of national disaster resulted in the creation of an Inter-Program Committee. In addition, Emergency Services has undertaken to develop and conduct first aid courses for federal employees, an initiative which has been well received by government departments.

Performance Information/Resource Justification

In May 1981, a new National Emergency Planning Order assigned the Department a number of responsibilities, including planning for a National Emergency Agency. The Emergency Services Activity, as the departmental coordinator, is responsible for ensuring that the necessary steps are taken to develop appropriate plans and

mechanisms to implement this policy. An Inter-Program Committee on Emergency Planning was established and a working group was set up to define the parameters of the National Emergency Agency. In preparation for the creation of this Agency, a review of the emergency equipment and supplies stockpile, as well as the revision of other program duties and planning activities, is under way. The annual costs of updating the stockpile is approximately $500,000; about 90 percent of this amount is spent on drugs, the remainder covers the cost of medical supplies and equipment.

Due to the increased interest in emergency planning both for peacetime and wartime emergencies, provincial demand for assistance from Emergency Services staff to plan and conduct courses and exercises has more than doubled in recent years. In three years, the number of students has risen from 250 to 650 and if more courses were available, upward of a 1,000 students should be trained each year to satisfy the demand. First Aid training for federal government departments has also increased over the past three years. By the end of the fiscal year 1984-85, 150 courses will have been conducted with a total enrollment of 2,030 public servants. An additional 16 public servants were qualified as instructors.

Effectiveness of performance could only be adequately assessed in the case of a true emergency such as a nuclear war or other large-scale disaster. The impact of the Emergency Services activity would then become clear by the reduced incidence of injuries, illnesses and deaths, and reduced social disorientation. In the absence of such calamities, the only relevant performance figures for this Activity are figures on emergency training and on first aid training, as in Figure 15.

Figure 15: Emergency Training and First Aid Training Performances

	Actual				Estimated	
	1980-81	1981-82	1982-83	1983-84	1984-85	1985-86
Emergency Training						
No. sessions	10	12	21	28	28	28
No. candidates	200	250	460	650	660	660
First Aid Training						
No. sessions	114	150	128	150	170	170
No. candidates	1,433	2,070	1,800	2,030	2,000	2,000

E. Program Administration

Objective

To provide overall direction to and coordination of program activities by providing policy advice and direction, planning, financial and administrative services.

Resource Summary

The Program Administration Activity accounts for 3.3 percent of the total program expenditures and for approximately 5.0 percent of the total number of person-years.

Figure 16: Activity Expenditure ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Administration	13,026	165	12,094	149	11,050	175
	13,026	165	12,094	149	11,050	175

Description

While the Program Administration Activity accounts only for a small percentage of Program expenditures it encompasses four out of the seven Program Directorates: Administration, Finance, Personnel, Secretariat, and Policy, Planning & Liaison (see Figure 3, page 15). The services provided by these Directorates include: the development of planning and information systems; the control and management of property and material resources; the administration of contribution agreements; the planning of facilities; the provision of financial and personnel administration services; the provision of administrative support services such as word processing, library services, manuals, forms and catalogues; and finally the provision of ongoing direction to the Program through the development of policy.

Performance Information/Resource Justification

To simplify and streamline the Program's procedures for allocating and controlling resources, terms of reference for a Branch Resource Allocation and Control Committee were developed and this committee is now fully operational. The goal to develop sound management practices and controls was also furthered by the establishment of a Secretariat to support Branch committees and ensure the proper implementation of Program priorities in Official Languages, Affirmative Action, Access to Information, etc.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by object

Figure 17: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	101,287	98,055	90,203
Employee benefit plans	14,180	12,321	14,464

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the Program. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

D. Federal Indian Health Policy (excerpts)

The following statement represents current federal government practice and policy in the field of Indian health and ... emphasizes issues which the federal government considers to be of greatest significance in the immediate future. In addition, studies relating to Indian health policy and practice are being undertaken by the National Indian Brotherhood and some provincial Indian associations, studies which National Health and Welfare supports. The federal government is committed to joining with Indian representatives in a fundamental review of issues involved in Indian health, when Indian representatives have developed their position, and the policy emerging from that review could supersede this policy. As an indication of good faith, the federal government withdrew the Guidelines for the Provision of Uninsured Health Benefits to Indian and Inuit people of September 1978... and they were replaced by the current Indian Health Policy.

The Policy is based on the special relationship of the Indian people to the federal government. ... It recognizes the circumstances under which many Indian communities exist, which have placed Indian people at a grave disadvantage compared to most other Canadians in terms of health, as in other ways.

Policy for federal programs for Indian people, (of which the health policy is an aspect), flows from constitutional and statutory provisions, treaties and customary practice. It also flows from the commitment of Indian people to preserve and enhance their culture and traditions. ... The federal government recognizes its legal and traditional responsibilities to Indians, and seeks to promote the ability of Indian communities to pursue their aspirations within the framework of Canadian institutions.

The federal government's Indian Health Policy reflects these features in its approach to programs for Indian people. The over-riding fact from which the policy stems is the intolerably low level of health of many Indian people who experience conditions rooted in poverty and community decline. The federal government realizes that only Indian communities themselves can change these root causes and that to do so will require the wholehearted support of the larger Canadian community.

Hence, the goal of the federal Indian Health Policy is to achieve an increasing level of health in Indian communities, generated and maintained by the Indian communities themselves.

This increasing level of health in Indian communities must be built on three pillars. The first, and most significant, is community development, both socio-economic development and cultural and spiritual development, to remove the conditions of poverty and apathy which prevent the members of the community from achieving a state of physical, mental and social well-being.

The second pillar is the traditional relationship of the Indian people to the federal government, in which the federal government serves as advocate of the interests of Indian communities to the larger Canadian society and its institutions, and promotes the capacity of Indian communities to achieve their aspirations. This relationship must be strengthened by opening up communication with the Indian

people and by encouraging their greater involvement in the planning, budgeting and delivery of health programs.

The third pillar is the Canadian health system. This system is one of specialized and interrelated elements, which may be the responsibility of federal, provincial or municipal governments, Indian bands, or the private sector. But these divisions are superficial in the light of the health system as a whole. The most significant federal roles in this interdependent system are in public health activities on reserves, health promotion, and the detection and mitigation of hazards to health in the environment. The most significant provincial and private roles are in the diagnosis and treatment of acute and chronic disease and in the rehabilitation of the sick. Indian communities have a significant role to play in health promotion, and in the adaptation of health services delivery to the specific needs of their community. Of course, this does not exhaust the many complexities of the system. The federal government is committed to maintaining an active role in the Canadian health system as it affects Indians. It is committed to encouraging provinces to maintain their role and to filling gaps in necessary diagnostic treatment and rehabilitative services. It is committed to promoting the capacity of Indian communities to play an active, more positive role in the health system and in decisions affecting their health.

These three pillars of community development, the traditional relationship of the Indian people to the federal government, and the interrelated Canadian health system provide the means to end the tragedy of Indian ill-health in Canada.

E. Medical Services Program Facilities

The physical resources maintained by the Program for the delivery of Indian and Northern health services range from private homes in isolated communities through trailer offices, to fully equipped nursing stations. The Program also runs eight hospitals built to combat tuberculosis and other infectious diseases, but now operating as acute care facilities. The type of facility depends on both the community's population and the degree of its isolation:

General Hospitals: facility operated for medical surgical/obstetrical care of in-patients and out-patients, usually located in or near a population centre;

Cottage Hospitals: smaller than general hospitals, with more limited treatment and diagnostic facilities, and fewer beds (approximately eight to twenty). Have a resident physician and are located in smaller population centres;

Clinics: field units usually affiliated to a hospital and directed by a physician;

Nursing Stations: field units located in isolated communities of 100 to 1,000 people where there is no other medical facility; staffed by one or more nurses and auxiliary staff who carry out public health activities, out-patient treatment and short-term in-patient care. Most of these facilities have patient accommodation.

Health Centres: units supplementing hospitals and clinics, usually located in a separate building or trailer and staffed by one or more nurses who carry out public health and preventive programs;

Health Stations: field units in isolated communities, often housed in a trailer, usually in the charge of a Community Health Representative (see pages 25 and 29). These units accommodate emergency cases and provide a base of operations for visiting nurses or doctors; and

Health Offices: buildings or spaces to accommodate nurses or doctors holding clinics or conducting health education programs.

As of April 1, 1984, the number of facilities in each category for Indian and Northern Health Services were as follows:

8	hospitals,
6	cottage hospitals,
12	clinics,
96	nursing stations,
127	health centres,
197	health stations,
63	health offices.

Section I
Program Overview

A. Highlights

Selected initiatives of the Health Protection Program for 1985-86 are as follows (Details of ongoing activities are provided in Sections II, Analysis by Activity):

- to increase the efficiency of Program resource utilization through negotiation of formal and informal agreements with international, federal, provincial and municipal agencies and professional bodies (see page 5-13);

- to continue the multi-year renovation and construction program initiated in 1982-83 to update laboratory facilities and prevent hazards to staff; financial requirements for 1985-86 are $3.7 million (see page 5-14);

- to ensure the adequacy of the Program's science base through the review and updating of reports prepared by expert committees which considered Program needs and recommended possible solutions (see page 5-14);

- to investigate potential health hazards associated with the presence of newly identified chemical contaminants in the food supply (see page 5-18);

- to develop regulatory initiatives pertaining to nutritional labelling, foods for special dietary use, and canned foods (see page 5-18);

- to continue development of the Good Manufacturing Practices assessment system for compliance assessment of the domestic food industry, with industry evaluation and acceptance of these Codes of Good Manufacturing Practices as working standards. (see page 5-18);

- to continue regulatory control over imported food products through surveys for specific hazards, participation in bilateral discussions with foreign regulatory agencies and exporters, review of recent trends in off-shore food manufacture and development of strategies to ensure continued regulatory equivalency with the domestic food manufacturer industry (see page 5-18).

- to develop a program to systematically review and update standards for chemicals used in foods (see page 5-18);

- to implement measures to speed processing and increase the efficiency of drug submission reviews (see page 5-24);

- to review marketed drugs ensuring that they have an acceptable balance between risk and therapeutic benefit (see page 5-24);
- to develop policy options and proposals for an ingredient disclosure system (see page 5-25);
- to adopt new analytical technologies to increase efficiency of the analytical service provided to law enforcement agencies engaged in control of drug abuse and trafficking (see p. 5-25);
- to revise the Radiation Emitting Devices Regulations to take account of advances in technology (see page 5-30);
- to examine concerns and consider regulatory solutions regarding home-use medical devices (see page 5-30);
- to improve regional compliance and liaison efforts regarding medical devices (see page 5-31);
- to develop revised guidelines for drinking water quality (see page 5-30);
- to conduct a study to determine the hospital acquired infection rate and risk factors in a number of Canadian hospitals (see page 5-34);
- to develop biotechnology based methods for the production of reagents for the diagnosis of infectious disease (see page 5-34); and
- to develop diagnostic methods and improve surveillance of Acquired Immunodeficiency Syndrome (AIDS) and sexually transmitted disease (see page 5-34).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For details see page
Food Safety, Quality and Nutrition	30,914	30,654	260	5-16
Drug Safety, Quality and Efficacy	41,204	41,530	(326)	5-22
Environmental Quality and Hazards	17,774	18,031	(257)	5-28
National Health Surveillance	10,961	11,187	(226)	5-33
Program Administration	14,730	12,949	1,781	5-36
	115,583	114,351	1,232	
Revenues	6,285	6,285	-	
Authorized person-years	1,960	1,959	1	

Revenue is generated through fees, fines and disposal of seized assets. This revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program (see page 5-43).

Personnel costs represent over 75.0% of total operating expenditures excluding grants and contributions.

The change in requested resources for 1985-86 arises principally from the following factors:

- Decrease of $0.8 million for Capital Replacement Plan
- Increase of $1.5 million for Construction and Renovation Programs
- Increase of $2.1 million for Increased Operating Costs
- Decrease of $0.2 million for National Energy Program
- Increase of $0.3 million for Safety of Drugs and Chemicals
- Decrease of $1.0 million for Reduced Program Activities
- Increase of $0.2 million for Personnel Costs
- Decrease of $1.0 million for Items Applicable Only To Fiscal Year 1984-85

C. Background

1. Introduction

To ensure a high standard of health for Canadians, the Department is involved in three major endeavours: the prevention of exposure to controllable health hazards, the promotion of a lifestyle likely to prevent illness, and the provision of health care to those who require it.

The Health Protection Program is primarily concerned with identifying and preventing exposure to health hazards associated with food, drugs, medical devices, radiation emitting devices, other consumer products and the environment. The Program also monitors the occurrence and cause of communicable and non-communicable diseases. This requires that the Program cooperate closely with other departmental programs, other federal departments and agencies, provincial departments of health, professional licensing bodies, various public, professional and industry associations, regulated industries, foreign governments and international agencies. The responsibility for the protection of Canadians from some types of health hazards, such as contaminants in the environment, is shared with other federal government departments.

The Health Protection Program collaborates with the Health Services and Promotion Program of Health and Welfare in a promotional strategy involving the dissemination of health information regarding such lifestyle issues as smoking and nutrition.

The Program also supports the provision of health care services by the provinces and the Medical Services Program of Health and Welfare through ensuring the safety and effectiveness of the drugs and medical devices on which modern medicine depends and by providing national laboratory diagnostic reagent and reference services. Specialized analytical services and expert testimony are also provided in support of Canadian law enforcement agencies engaged in the control of drug abuse and trafficking.

The Health Protection Program provides professional health advice to other government departments upon request or as a result of interdepartmental agreements.

2. Legal Mandate

The major statutes comprising the legal mandate for the Health Protection Program are the Department of National Health and Welfare Act, the Food and Drugs Act, the Narcotic Control Act, the Radiation Emitting Devices Act, the Environmental Contaminants Act, and the Hazardous Products Act (other acts and instruments which support the Program mandate are presented in Section III, Page 5-43).

3. Program Objective

The objective of the Health Protection Program is "to reduce illness and untimely death of Canadians associated with hazards in the environment, both man-made and natural".

1989

4. Program Organization for Delivery

Activity Structure: The Health Protection Program consists of five activities as shown in Figure 2.

Figure 2: Activity Structure

Organization Structure: The Health Protection Branch (HPB), which is responsible for the Health Protection Program, is organized into five line directorates plus the supporting Finance and Administration Directorate. Four of the line directorates (Food Directorate, Drugs Directorate, Environmental Health Directorate and Laboratory Centre for Disease Control) are situated primarily in Ottawa. The fifth, the Field Operations Directorate, maintains a small headquarters group but the majority of staff are located in five regional and 21 district offices across Canada, where they are engaged in inspection, analysis and education tasks within three activities (Food Safety, Quality and Nutrition, Drug Safety, Quality and Efficacy, and Environmental Quality and Hazards). HPB occupies 12 laboratory facilities, seven of which are in Ottawa. The remaining five are in Halifax, Montreal, Toronto, Winnipeg and Vancouver. A listing of regional and district offices is provided in Section III, page 5-44.

Figure 3 illustrates the organizational structure of the Program and the relationship of resources assigned to each organizational unit to those for each activity.

* There are no costs shown for the Personnel Advisor as they are borne by the Administration Program of the Department.

5. Program Description

The Health Protection Program is responsible for the reduction of health hazards that lead to illness and early death. In fulfilling this responsibility, the Program carries out research to identify and determine the extent of hazards and to develop methods for detecting and measuring hazards and diagnosing disease. Statistically unbiased measurements of health effects, disease incidence, conditions of products or consumables, or industry conditions and practices are undertaken to identify the extent of a hazard. Research findings and measurements, as well as industry and international data, are evaluated and standards, guidelines and regulations are established or revised, or recommendations are provided to other agencies having regulation-making or implementation authority. Industry submissions are evaluated to determine the suitability of new products for marketing.

In addition products, consumables and industry processes are measured to detect those not meeting standards, and corrective action (including enforcement action) is taken to rectify deficiencies. Awareness of product characteristics and safe use is promoted and technical knowledge and skills are taught to consumers, industry, health professionals and institutions, to effect self-correction by industry and health professionals and informed decision-making by consumers and health professionals. Technical information and services

are provided to outside agencies. All activities are responsible for carrying out all or most of these actions (depending upon the legal mandate).

Workloads are either explicitly or implicitly determined by legislation. In other cases, the workload is determined by the identification of new hazards, resulting in a requirement to bring the hazard under control.

D. Planning Perspective

1. Environment

The Program faces a complex and changing environment which includes the following key factors:

Disease Trends: With increasing ability to prevent and treat communicable disease, chronic illnesses such as cancer and cardiovascular disease have become the major causes of death in Canada. While certain factors which contribute to the development of chronic diseases have long been recognized and controlled through standards and regulations enforced by this and other regulatory programs, additional knowledge about the causes of chronic illness is necessary to allow control measures to be developed.

Although communicable diseases are better controlled than they once were, continued surveillance, investigation and control are required since previously unrecognized diseases (e.g., Legionnaires' Disease and Acquired Immunodeficiency Syndrome (AIDS)) continue to appear and old ones continually threaten to recur.

Technological Change: Developments in areas such as microelectronics, biomedical engineering and biotechnology are resulting in a new generation of industrial, medical and consumer products and processes. In many cases the assessment of the safety of these products is the responsibility of the Health Protection Program. This requires the Program to be able to apply "state of the art" knowledge in diverse, technically complex fields in order to ensure credibility with regulated industries.

The Program is also affected by worldwide research efforts regarding the hazards posed by technology and the means by which these hazards may be controlled. New knowledge resulting from these efforts combined with the availability of new products superior to older ones, is resulting in the need for reassessment of previous decisions regarding the continued marketing of older products and the basis on which such decisions are made.

Quality of the Environment: Increased industrialization is one factor which has contributed not only to a higher Canadian living standard but also to contamination of the environment with an ever growing variety of toxic substances. This has resulted in such well-publicized national and international problems as acid rain and incidents of contamination of surface and ground water with pesticides and other chemicals.

As people spend an increased proportion of both their free and work time indoors, exposure to potentially hazardous substances in air has also increased. This situation is exacerbated by the tendency toward better-sealed buildings.

Additional factors such as changes in occupational patterns, increased office automation and concern about occupational health and safety contribute to growing pressures on the Program to assess the health implications of environmental exposure to a wide range of substances and products.

Economic Development and Trade: Canada's economic well-being depends largely on its ability to sell on the international market. Use of non-tariff barriers, often justified on the basis of such criteria as occupational health or consumer safety, are increasingly threatening Canada's export market. As an example, the Program was recently asked to investigate the safety of asbestos use to support export sales of asbestos. There has, in addition, been a recent trend by Canadian and multinational companies to move their food manufacturing operations to off-shore locations. There are potential economic, health and regulatory impacts associated with these developments.

At the same time, heightened awareness of the domestic inter-relationship of health and economic concerns is resulting in the Program being called on to conduct special studies of significant magnitude and expense with potentially far-reaching economic consequences. An example is the recent study of the safety of video display terminals.

Social Trends: The Program is subject to a number of factors in this area. The control of drugs subject to abuse is being made more difficult by a trend toward increased use of illicit psychoactive drugs and the diversion of licit drugs to illicit use. In addition, shifts in eating patterns toward more meals eaten away from home and greater use of prepackaged and synthetic foods raise concerns regarding nutritional adequacy. Public distrust of science is also increasing. This is fuelled by publicity regarding fraudulant data used to support safety claims for certain chemicals and concern over the use of food additives. An increased interest in fitness and health and increased coverage of science and technology in the lay press further contribute to this situation. As a result there is increased public demand for disclosure of information and the provision of guidance.

2. Initiatives

The major initiatives for the Health Protection Program for 1985-86 are in the following areas:

Agreements: Continuing efforts will be exerted to initiate or finalize formal and informal agreements with international, federal, provincial and municipal agencies and professional bodies to define work sharing arrangements. These include the negotiation of agreements with China, Japan, France, Israel and the United States regarding such issues as food safety and Good Laboratory Practice.

Renovation/Construction: In order to ensure that the program operates in laboratory facilities adequate for its needs with particular attention to staff safety, the major renovation and construction programs initiated in the previous two fiscal years will be continued. Renovations to the Sir Frederick Banting Research Centre and the Environmental Health Centre have been deferred with work to commence in 1985. Capital expenditures of $3.7 million are required for 1985-86 (see page 5-40).

Science Panels: A series of expert committes have reviewed available information regarding the science base of the program and its ability to meet current and future challenges of new technology and other factors expected to affect the program in the foreseeable future. Reports prepared by these committees will be reviewed and periodically updated. Recommendations contained in the foregoing reports will be considered for implementation.

3. Program Effectiveness

Qualitative indicators of the effectiveness of the Health Protection Program in meeting its stated objective include the following:

- Canadian morbidity and mortality statistics compare favourably with those in other countries; while it must be recognized that this cannot be attributed solely to the Program, failure of the Program to carry out its responsibilities effectively would adversely affect such statistics;

- the strategies employed by the Health Protection Program are similar to those employed by respected national health agencies in other developed countries; for instance, in the U.S., the Food and Drug Administration, Drug Enforcement Authority and Centres for Disease Control collectively employ similar strategies to those taken in Canada by the Health Protection Program;

- program management are considered equal participants with their counterparts from the U.S. and U.K. in the annual Tripartite Meeting regarding health protection problems and approaches to their solutions; this may be interpreted as peer recognition of the Health Protection Program by two of the world's most respected national health organizations;

- program scientific staff are continually called on to provide expert opinion and guidance by the media, staff of other government departments, consumers and others; similarly, Program staff are in demand to serve on international or federal-provincial committees and for assignment to international agencies such as the World Health Organization indicating a positive perception of Program expertise and value;

- research studies carried out by the Program are internationally recognized, and standards and regulations based on these are often adopted by other countries or international agencies; for example, Canadian studies on the toxic effects of saccharin were used as the basis for regulatory action in the U.S., identification of vomitoxin in Canadian wheat prompted action in other wheat producing nations, and Canadian

Drinking Water Quality Guidelines have been proposed as international standards to the World Health Organization;

- products regulated by the Program are generally assumed to be safe by Canadian and international consumers; for example, Canadians appear to have confidence in the quality and safety of Canadian drug products and food products manufactured to Canadian standards are readily accepted worldwide;

- the findings of a recent program evaluation study indicate that the program is effective in identifying and controlling many environmental contaminants and radiation hazards which threaten health.

Additional measures of effectiveness exist. For instance, projects which comprise the activities of the Program undergo regular review by senior management and certain activities carry out annual review processes involving outside experts. However, it is expected that the effectiveness of the Program may ultimately be demonstrated through an ongoing process of program evaluation studies of those activities which constitute the Health Protection Program. Such studies, by providing evidence of the achievement of objectives would, in aggregate, demonstrate the value of the Program as a whole.

Section II
Analysis by Activity

A. Food Safety, Quality and Nutrition

Objective

To identify and control dangers associated with the microbiological and chemical hazards in the food supply and the nutritional quality of foods.

Resource Summary

The Food Safety, Quality and Nutrition Activity accounts for 26.7% of total Program expenditures and 30.2% of the total person-years. A breakdown of resources is provided in Figure 4.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Food Research, Evaluation and Standards	16,005	258	15,606	257	15,161	243
Food Inspection and Compliance	14,909	333	15,048	332	14,673	332
	30,914	591	30,654	589	29,834	575

Of the total expenditures 76.0% is for personnel costs, 14.4% for operations and maintenance, and 9.6% for capital costs.

Description

Food Research, Evaluation and Standards: This sub-activity, conducted by the Food Directorate, pursues the following strategies to ensure that the Canadian food supply is nutritious and has a high standard of safety and quality:

- development and evaluation of new or improved laboratory methods of food analysis in support of toxicology research, projects to monitor hazards, and enforcement, surveillance and regulatory development endeavours;
- identification of various microorganisms and microbial toxins associated with cases of food poisoning;

- identification and assessment of hazards related to chemicals in food, including the assessment of human exposure and tolerances;

- assessment of nutritional adequacy and composition of foods as well as human requirements and the determination of the nutritional status of Canadians;

- the evaluation, review and formulation of recommendations regarding the use, safety and efficacy of chemicals in foods; and

- the development of regulations, standards, appropriate guidelines and codes of practice as well as the provision of advice and recommendations regarding regulatory changes and their interpretations.

The sub-activity conducts investigations on the effects of foods and their actual or proposed ingredients upon human health and disease by pursuing ongoing processes such as the review of safety and efficacy of proposed additives, and by pursuing a wide variety of short or long term projects in regulatory development and maintenance as well as in several areas of research such as food toxicology, methodology development, technology transfer and risk factor analysis.

Food Inspection and Compliance: This sub-activity, conducted by the Field Operations Directorate, contributes to the safety and nutritional quality of the food supply through the following strategies:

- assessment of the capability of the domestic food industry to produce foods which meet safety and nutritional quality standards;

- surveillance of the conformity of domestic and imported foods with standards of safety and nutritional quality;

- development of cooperative programs with, and provision of leadership to, provincial and municipal agencies involved with food surveillance and corrective action;

- measurement of the nutritional quality of and extent of chemical and microbiological hazards in food commodities, in support of evaluation and regulatory development;

- provision to target audiences of educational programs concerning food safety; and

- resolution of incidents of non-compliance with food safety and nutritional quality standards, including the initiation of legal action.

Performance Information/Resource Justification

Selected initiatives planned by the activity (see page 5-6) for 1985-86 are as follows:

Continued Investigation of Newly Identified Food Contaminants: Recent technological advances in methods for the detection of trace amounts of chemicals in food have resulted in the identification of fungal toxins and other potentially hazardous chemical contaminants in food products. The occurrence, level and health significance of these substances will continue to be assessed.

Food Regulatory Initiatives: Regulatory initiatives will be developed in regard to Nutritional Labelling of foods. In addition, Regulatory Proposals governing infant formulas, the use of irradiation as a food process and the presence of lead in canned tomato products will be developed.

Codes of Good Manufacturing Practice (GMP's): Development and promotion of the use of GMP's as an alternative to food product testing is preferable since it focuses on prevention of problems rather than after-the-fact problem identification. Existing GMPs will be subjected to industry evaluation, endorsed for use, and applied to the assessment of the level of compliance of Canadian food producers.

Surveillance of Imported Food Products: Surveillance and testing of imported food products is necessary because this activity does not conduct off-shore food inspections. This surveillance and testing coupled with communication of Canadian regulatory requirements to importers and countries which export to Canada, will encourage compliance with Canadian requirements and help ensure regulatory equitability between domestic and imported products. A review of current trends in off-shore manufacture of foods, especially the growing trend toward manufacture of finished products for export to Canada will enable the development of timely regulatory strategies.

Review of Food Chemicals: Data requirements for the evaluation of the acceptability of chemicals used in foods continually evolve based on scientific advances. As a result some chemicals currently approved for use may require re-evaluation in accordance with revised standards. A program to systematically review these substances will be developed.

Figure 5 provides summaries of specific outputs for 1985-86 accounting collectively for a majority of the resources available to each sub-activity. The costs associated with resource intensive project areas, such as the identification and assessment of health hazards due to food contaminants, are identified. Further details are provided on page 5-20.

Figure 5: Food Safety, Quality and Nutrition

Sub-Activity	Resources ($000)	P-Y	Overall Output	Specific Outputs for 1985-86
Food Research, Evaluation and Standards	16,005	258	Identification and assessment of hazards in the food supply as well as the development and promulgation of regulations, guidelines, standards and codes of practice.	o Identification and assessments of health hazards related to the occurrence and levels of chemical contaminants in the food supply, including pesticides and the determination of the nutritional adequacy of foods (56 P-Y, $3.4 million. See page 5-20). o Evaluations, reviews and recommendations regarding the use of new agricultural chemicals, food additives, food packaging materials and also regarding data on composition, safety and nutritional quality of foods. (53 P-Y, $2.3 million. See page 5-20). o New classification of food container defects as a basis for Safety Assessment. o New laboratory methods for the analysis of foods (56 P-Y, $2.6 million. See page 5-20). o Evaluations of health hazards associated with cases of microbial and extraneous material (filth) contamination of foods. o New regulatory proposals for food irradiation and for lead in tomato products. o Toxin analysis of shellfish extracts to control safety of marketed shellfish in Canada. o Revised regulations for the control and safety of infant formulas (Labatt's Decision). o Establishment of an Advisory Committee to assess the dimension of safety concerns associated with herbal substances.
Food Inspection and Compliance	14,909	333	Assurance that food manufacturers and food products marketed in Canada comply with regulatory requirements.	o Participation in bilateral discussions with foreign Regulatory Agencies and exporters on topics of food safety and Canadian Regulatory Requirements. o Re-assessment of major food industries for compliance with good manufacturing practices and guidelines which were piloted to 1984-85. o Data on the capacity of food manufacturers, processors, or importers to produce safe food. o Surveillance for compliance of Canadian manufacturers and Canadian and imported food products through plant inspections and laboratory analyses (170 P-Y, $8.8 million. See page 5-20). o Education projects to increase consumer awareness of food safety. o Resolution of a projected 4500 trade or consumer complaints against food products. o Resolution of a projected 100 hazard/situations with appropriate actions such as product recalls, seizures, and import entry refusals, as required. o A projected 350 enforcement actions in response to food products or manufacturing/processing or import conditions that are in violation of The Food and Drugs Act and Regulations. o A projected 3,800 laboratory analyses conducted for other federal government departments.

Details of resource intensive selected outputs are as follows:

Premarket Evaluations: Manufacturers are required to submit data to the activity to demonstrate the safety of many classes of chemicals proposed for use in food. Approval is only granted after the proposed use has been judged safe. Similarly, with the increased use of highly processed or formulated foods and foods for individuals with special dietary needs, and specialty foods, premarket assessment of nutritional adequacy and safety is needed to ensure these products are safe and effective for continuous dietary use. Resources required for their tasks are dictated by the submission workload. (This will require 53 person-years and $2.3 million in 1985-86.)

Laboratory Methods of Analysis: Laboratory methods of analysis of food constituents or contaminants (including microbiological contaminants) are required for the identification and assessment of and development of measures to control health hazards. Surveillance is also required to determine industry compliance with standards and regulations. Since laboratory methods of analysis are generally specific in a particular food or other media (e.g., blood), new or altered methods are continually required to allow the analysis of different substances, or the same substance in different media, or to provide more sensitivity, accuracy or specificity. Resources are allocated to methods development studies in proportion to their importance to the overall work of the Activity. (This will require 56 person-years and $2.6 million in 1985-86.

Surveillance: Manufacturing standards are developed to indicate safe or acceptable practices likely to prevent products from posing a health hazard. Inspection of facilities against these standards allows the assessment of a manufacturer's compliance and the relative likelihood of his products posing such a hazard. Similarly, standards or limits on contaminants are developed to indicate product safety, and laboratory analysis of products against such standards allow product acceptability to be determined. Inspection and analysis resources are inadequate to allow all manufacturers or all products to be assessed. Consequently, resources are targeted toward suspected problem areas and used to survey the marketplace to ensure that manufacturers' quality control programs are effective and to identify areas where action is required. Resources are allocated to surveillance tasks in proportion to their priority relative to other sub-activity strategies. In 1983-84 a total of 2081 plant inspections and 38,000 analyses were carried out. (This will require 170 person-years and $4.8 million in 1985-86.

Identification and Assessment of Health Hazards and the determination of nutritional adequacy of foods: In order to develop control mechanisms which ensure that Canadians are protected from health hazards associated with foods it is necessary to first undertake research to determine the occurrence, level and toxicity of previously unrecognized or poorly characterized hazards. Secondly, nutritional requirements and the appropriate levels of nutrients in food must be established if nutrition related health hazards are to be prevented. This involves comparatively complex and expensive laboratory research studies. Dependable, timely data are required to justify additional or changed control measures which, based on the number of problems needing attention, requires

that resources be adequate to allow multiple project to be pursued simultaneously. Resources are allocated to these projects based on judgement of the potential severity and extent of health hazards and priority relative to other sub-activity requirements. (This will require 56 person-years and $3.4 million in 1985-86.)

B. Drug Safety, Quality and Efficacy

Objective

To identify and control dangers to the health of Canadians from drugs or their ineffective or unwise use; to prevent the improper use of dangerous drugs or their diversion from the licit to the illicit market.

Resource Summary

The Drug Safety, Quality and Efficacy Activity accounts for 35.6% of total Program expenditures and 34.3% of the total person-years. A breakdown of resources is provided in Figure 6.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Drug Safety and Efficacy	19,401	341	20,010	350	16,705	323
Control of Dangerous Drugs	11,522	125	12,307	122	11,112	122
Quality of Marketed Drugs	10,281	206	9,213	206	9,242	211
	41,204	672	41,530	678	37,059	656
Revenue	5,261		5,261		5,339	

Of the total expenditures 67.3% is for personnel costs, 29.1% for operations and maintenance and 3.6% for capital costs. Revenue is due to the charging of fees, fines and disposal of seized assets. Revenues are not available to the Program as offsets against expenditures (see page 5-43).

Description

Drug Safety and Efficacy: This sub-activity, conducted by the Drugs Directorate, is responsible for ensuring the timely acceptability for marketing in Canada of safe and effective drugs, their continued safety and effectiveness after approval, and their judicious use. To minimize the hazards posed by these complex chemicals, a number of strategies are employed by the sub-activity, including:

- scientific investigation of the characteristics of, and potential hazards posed by human and veterinary drugs;
- development of laboratory analytical methodology to be used in the assessment of compliance with regulations and standards and in the support of toxicology research;
- development of operational recommendations, interpretive guidelines, standards and regulations;
- evaluation of information supplied by manufacturers in support of the safety, quality and effectiveness of human and veterinary drugs proposed for marketing in Canada;
- approval or review of drug advertising;
- approval on an emergency basis of physicians' requests for the import of drugs not available in Canada; and
- provision of information to health professionals on the wise use and safe handling of human and veterinary drugs.

Control of Dangerous Drugs: This sub-activity, conducted by the Drugs Directorate, is responsible for ensuring that narcotic and controlled drugs for medical use are manufactured and sold in accordance with Canadian and international control requirements and that an appropriate legislative and control framework exists for prohibited narcotic, controlled and restricted drugs.

To carry out these responsibilities a number of strategies are employed, including:

- development of recommendations, policy interpretive guidelines, regulations and drug schedules;
- licensing and import/export permit control at the wholesale level and monitoring and reporting of sales at the retail level;
- inspection and investigation to ensure compliance of authorized individuals and outlets and maintenance of information on patterns of abuse and misuse;
- maintenance of liaison with the health professions to promote judicious use of narcotic and controlled drugs and with law enforcement agencies to reduce diversion of legal drugs to the illicit market; and
- fulfillment of statutory obligations respecting collection of revenues, disposal of seized drugs and assets and payment of prosecution costs.

Quality of Marketed Drugs: This sub-activity, conducted by the Field Operations Directorate, is responsible for ensuring that marketed pharmaceutical products are manufactured to, and conform with, established standards of drug quality. Resources are allocated to the improvement, maintenance or establishment of the level of compliance of manufacturers of prescription, non-prescription and veterinary drug products.

Various strategies are employed and include:

- inspection of drug production and manufacturing facilities and analysis of drug products;
- promotion of voluntary compliance with federal drug regulations by working cooperatively with the drug industry and trade associations;
- development of recommendations for changes in policy and regulations;
- enforcement actions (seizures, recalls or prosecutions) when necessary to ensure that, once identified, hazardous drug products pose no threat to the Canadian population; and
- provision of information to consumers on the wise use and safe handling of drugs.

Resources within this sub-activity are also allocated to providing laboratory drug analysis and expert advice to law enforcement agencies across the country. These services support the enforcement of portions of the Narcotic Control Act and the Food and Drugs Act.

Performance Information/Resource Justification

Selected initiatives planned by the activity (see page 5-6 and 5-7) for 1985-86 are as follow:

Review of Drug Submissions: Prior to marketing a New Drug in Canada, manufacturers must submit evidence respecting its safety, efficacy and quality. Over the past several years, there has been a steady increase in the number of submissions, resulting in lengthy backlogs prior to the beginning of review. Increased resource levels approved during 1984-85 will improve the situation during 1985-86. It is anticipated that backlogs will be eliminated for Pre-clinical Drug Submissions and reduced for New Drug Submissions. Reduced backlogs will improve the climate for clinical research in Canada, making Canada more competitive internationally in attracting clinical research, and will assist in making valuable therapeutic agents available in the health care system as early as possible.

Periodic Review of Marketed Drugs: All drug therapy carries with it the risk of unexpected adverse effects. To ensure that marketed drugs have an acceptable balance between risk and therapeutic benefit, they are subject to periodic

review based on current evaluation standards. Drugs to be studied are those which were marketed some time ago when less rigorous standards were in force, and some more recently introduced that have exhibited unexpected side effects. It is anticipated that some drug products will be removed from the market in 1985-86 and that others will require restrictions on the indications for their use, based on newly generated scientific and clinical evidence.

Non-medicinal Ingredient disclosure for Drugs: Recent scientific evidence has implicated some of the non-medicinal ingredients contained in drug products in producing adverse reactions in a small percentage of the population. Experience gained in dealing with tartrazine (used as a colouring agent in drugs) and sulfites (used as preserving agents in drugs) suggests that disclosure of non-medicinal ingredients in drugs is in the public interest. During 1985-86, policy options will be developed, public consultations will be undertaken and proposals for the establishment of an ingredient disclosure system will be put forward.

New Analytical Technologies: New automated laboratory equipment is allowing efficiency and productivity to be raised, resulting in potential savings which will be applied to deal with changing workload and ensure that the present high level of analytical service to law enforcement agencies is maintained.

Figure 7 provides summaries of specific outputs for 1985-86 accounting collectively for a majority of the resources available to each sub-activity. The costs associated with resource intensive project areas, such as evaluation of safety and effectiveness of drugs prior to marketing are identified. Further details are provided on page 5-27.

2005

Figure 7: Drug Safety, Quality and Efficacy

Sub-Activity	Resources ($000)	P-Y	Overall Output	Specific Outputs 1985-86
Drug Safety and Efficacy	19,401	341	Timely approval of safe and effective drugs for the prevention and treatment of illness in Canada and minimized drug-related hazards.	o Identification and assessments of health hazards associated with drug products and their constituents, including assessments of the continued safety and efficacy of marketed products (81 P-Y, $4.5 million. See page 5-27). o Evaluations of a projected 950 submissions respecting the safety and effectiveness of drugs prior to marketing in Canada (110 P-Y, $4.8 million. See page 5-27). o Assessments of compliance of biological drug manufacturers and marketed biological drugs with standards and regulatory requirements (41 P-Y, $2.0 million. See page 5-27). o Decreased backlogs for premarket drug submissions (see page 5-27). o Clearance on an individual case basis of more than 90% of requests within 24 hours for the import and use of drugs not available in Canada. o Evaluation of selected marketed drugs for continued safety and effectiveness (see page 5-24).
Control of Dangerous Drugs	11,522	125	Minimized improper use and diversion of licit psychoactive drugs.	o Inspections and investigations of a projected 5,000 persons and establishments authorized to possess, distribute and prescribe psychoactive drugs. o Collection and deposit of revenues, and disposal of drugs and assets seized under the legislation with a total value of about $5.0 million. (See page 5-22 and Section III, page 5-43)
Quality of Marketed Drugs	10,281	206	The assurance that marketed pharmaceutical products comply with current regulatory requirements.	o Surveillance for compliance of Canadian manufacturers and domestic and imported drug products through inspections of premises and laboratory analyses (100 P-Y, $2.8 million. See page 5-27) o provision of a projected 1,000 reports on product/supplier compliance as part of federal/provincial cooperation in to health care for Canadians. o Assessment, within one year of marketing, of the level of compliance of new drug products and take corrective action on identified violations. o Resolution of a projected 100 hazard situations with appropriate actions such as product recalls or seizures, as required. o Provision of results of a projected 46,000 qualitative chemical analyses, 3,000 quantitative analyses, and expert testimony to law enforcement agencies engaged in control of drug abuse and trafficking. o Information on veterinary drugs and other educational projects to promote the safe and informed use of drugs.

Details of resource intensive selected outputs are as follows:

Identification and Assessment of Health Hazards: Laboratory re-search projects are necessary to determine the occurrence, level and toxicity of previously unrecognized or poorly characterized hazards in order to assess the need for additional or modified control measures. These studies must provide dependable, timely data on which such controls can be justified. Resources are allocated to these projects based on priority relative to other sub-activity requirements. (This will require 81 person-years and $4.5 million in 1985-86.)

Premarket Evaluation of New Drugs: Assessment of the safety and efficacy of drugs prior to marketing is considered an essential part of a modern drug regulatory program. A total of 850 submissions of all types were reviewed during 1983-84. Resources are allocated on the basis of workload. (This will require 110 person-years and $4.8 million in 1985-86.)

Assessment of Biological Drugs: The safety of many biological drugs is critically dependent on quality. Consequently, in addition to pre-market evaluation requirements, these drugs are subject to lot-by-lot examination and approval prior to sale. Compliance with manufacturing standards is also monitored through plant inspections. Resources are allocated on the basis of workload and priority relative to other sub-activity requirements. (This will require 41 person-years and $2.0 million in 1985-86.)

Surveillance: Inspection of manufacturing plants and laboratory analysis of products provide evidence of manufacturers' compliance with legal standards relating in particular to purity, content and other mandatory requirements. Non-compliance results in appropriate corrective action. Since only a proportion of manufacturers and products can be surveyed each year, available resources are targeted toward high risk products and suspected problem areas. In 1983-84 a total of 240 drug manufacturing were inspected and approximately 15% of the approximately 15,000 notified drug products were analysed in the laboratory. Resources are allocated based on priority relative to other sub-activity requirements. (This will require 100 person-years and $2.8 million in 1985-86.)

Service to Law Enforcement Agencies: Laboratory analysis and expert testimony services are provided to law enforcement agencies to support drug abuse control efforts. During 1983-84 a total of 50,574 analyses were performed and staff appeared as expert witnesses in 178 court cases. The breakdown of analyses, 46,447 qualitative analyses, 2,428 quantitative analyses, and 1,699 diluent identifications, indicates an increase in the more time-consuming quantitative analyses as law enforcement agencies strive to control drug trafficking. Staff also dismantled nine clandestine drug laboratories. Resources are allocated on the basis of workload and priority relative to other sub-activity requirements. (This will require 60 person-years and $1.7 million in 1985-86.)

C. Environmental Quality and Hazards

Objective

To identify other man-made and natural environmental hazards and to control the use of dangerous products.

Resource Summary

The Environmental Quality and Hazards Activity accounts for 15.4% of total Program expenditures and 14.1% of the total person-years. A breakdown of resources is provided in Figure 8.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Environmental, Occupational and Medical Device Hazards	17,287	259	17,453	258	17,272	264
Medical Device Quality	487	17	578	16	646	16
	17,774	276	18,031	274	17,918	280
Revenue	1,000		1,000		858	

Of the total expenditures 62.1% is for personnel costs, 29.0% for operations and maintenance and 8.9% for capital costs. Revenue is from fees charged for provision of dosimetry services and is not available to the Program as offsets against expenditures (see page 5-43).

Description

Environmental, Occupational and Medical Device Hazards: This sub-activity, conducted by the Environmental Health Directorate, is responsible for:

- the assessment and investigation of the health effects of environmental pollutants;
- the assessment and investigation of health hazards associated with, and the control of, medical devices, radiation sources and hazardous products; and

- in conjunction with other organizational units of the Department, the assessment of the health effects of technological and sociological environments.

These tasks are performed through a combination of in-house facilities and contracts with the private sector.

To carry out these responsibilities a number of strategies are employed, including:

- research to identify and assess health hazards;
- development of guidelines, standards and regulations to control health hazards associated with products for which the activity is responsible;
- development and provision of advice or recommendations to other departments or agencies regarding the safety of products for which responsibility is shared;
- evaluation of information supplied by manufacturers in support of safety, quality and effectiveness claims for medical devices and pesticides;
- inspection of x-ray facilities within federal jurisidiction; and
- provision of medical device hazard alerts to health professionals.

Medical Device Quality: This sub-activity, conducted by the Field Operations Directorate, is responsible for ensuring that marketed medical devices conform with regulatory requirements and are used in a judicious manner.

Various strategies are employed and include:

- inspection of medical device manufacturing facilities and analysis of medical devices;
- liaison and coordination with regulatory agencies in other countries, particularly the United States;
- enforcement actions designed to ensure compliance with the law (seizures, recalls, or prosecutions) thereby reducing or removing medical device hazards facing the Canadian public; and
- provision of educational material to health professionals and consumers on the proper use of medical devices.

Performance Information/Resource Justification

Selected initiatives planned by the activity (see page 5-7) for 1985-86 are as follows:

Revised Radiation Emitting Devices Regulations: The primary objective of this activity is to control health hazards associated with devices that emit radiation. This involves the development of regulations specifying safety standards for design, construction and performance. Amendments to regulations are being considered to make requirements more generic and flexible to allow for future developments in technology. Amendments are being processed to include computed tomography (CT) X-ray equipment and to incorporate the newer types of sunlamps on the market into the sunlamps regulations. Also in process are amendments to clarify regulatory requirements for ultrasound therapy devices and to regulatory requirements for ultrasound therapy devices and to update the requirements for diagnostic X-ray equipment, gas discharge devices and extra-oral dental X-ray equipment.

Revised Drinking Water Quality Guidelines: The federal role in ensuring drinking water quality has been to develop, in concert with the provinces, national guidelines for drinking water contaminants. These guidelines, last revised in 1978, require updating in the light of new knowledge, especially relating to organic contaminants. The present guidelines are limited to only 52 substances, while the number of pollutants in water identified by the International Joint Commission as having potentially adverse health effects has been set at 381 chemicals. A Federal-Provincial working group on Drinking Water Quality has been established to revise the current guidelines. The group has met twice to date and have agreed to review criteria for the present 52 substances as well as an additional list of approximately 30 organics and pesticides.

Control of Home-Use Devices: The number and variety of medical devices promoted directly to the public is increasing rapidly and is estimated to have doubled last year in the U.S.A. Some of these devices claim to diagnose many diseases including diabetes, hypertension, cancer and venereal infections. Therapeutic claims for others include relief from chronic pain, reduction of weight and anxiety or many other real or imaginary maladies. Many of the products can be useful in the hands of trained persons, but others pose serious hazards, or are fradulent. On the recommendation of provincial registrars of pharmacy and medicine and several professional societies, a workshop will be held this fall to discuss the concerns and consider regulatory solutions such as restricting sales by prescription. Present activities include: identification and assessment of specific device hazards e.g. electronic muscle relaxers, automated blood pressure kits and portable insulin infusion pumps; and development of standards, guidelines and educational material for widely used products e.g. home-use blood glucose monitors, pregnancy test kits and cancer screening tests.

- **Regional Medical Device Presence:** In response to 1983/84 program evaluation recommendations, the need for specialized personnel and the availability of new resources, the Medical Device Quality Sub-Activity has been restructured to provide an increased regulatory activity on imports, and to allow improved liaison with health professionals in order to better identify and remedy hazards associated with the more than 300,000 medical devices sold in Canada. Technology change and increased reliance of health professionals as medical devices has placed tremendous pressure on regulatory progress designed to ensure their safety and effectiveness.

Figure 9 provides summaries of specific outputs for 1985-86 accounting collectively for a majority of the resources available to each sub-activity. The costs associated with resource intensive project areas, such as the identification and evaluation of health hazards of chemicals, are identified. Further details are provided on page 5-32.

Figure 9: Environmental Quality and Hazards

Sub-Activity	Resources ($000)	P-Y	Overall Output	Specific Outputs 1985-86
Environmental, Occupational and Medical Device Hazards	17,287	259	Advice, assessments, standards, guidelines and regulations for the reduction of health hazards associated with medical devices, radiation sources, chemical products and environmental pollutants.	o Premarket reviews of a projected 600 Part V medical devices (8 P-Y, $400,000). o Development of four new regulations, guidelines or acceptability criteria to protect the health of users of medical devices and to assist Canadian manufacturers of devices. o A projected 150 corrective actions (recalls and alert letters as appropriate) in response to medical device problem reports. o Revised Radiation Emitting Devices Regulations pertaining to X-Ray devices, Ultrasound therapy devices and sunlamps to take account of advances in technology. (See page 5-30) o Provision of Dosimetry Services to a projected 115,000 occupationally exposed workers within a specified turn around time (29 P-Y, $1.6 million. See page 5-32). o Revised guidelines for Canadian Drinking Water Quality. (See page 5-30) o A survey of population exposure to medical X-rays. o Occupational Health guidelines for pregnant workers. o Identification and evaluation of the health hazards of chemicals, consumer products and pesticide submissions (57 P-Y, $4.0 million. See page 5-32).
Medical Device Quality	487	17	Assurance that marketed medical devices comply with regulatory requirements and increased awareness of the proper use of devices.	o Continuation of the redesigned surveillance and corrective action program to improve the level of compliance of medical devices and their manufacturers/suppliers and to reduce the number of hazardous devices in use, presented for import or sale. o Establishment of regional contact points to encourage health professional associations to assist in the identification and resolution of medical device problems. (See page 5-30) o Distribution of educational publications on medical devices as well as maintainance of other ongoing educational thrusts. o Removal of a projected 100 hazardous medical devices from the market.

Details of resource intensive selected outputs are as follows:

Dosimetry Service: A national radiation dosimetry service is provided on a cost recovery basis. Monitoring badges worn by workers potentially exposed to radiation are processed by the service and results are reported to employers to provide a record of radiation exposure. In 1983-84 about 107,000 workers were monitored involving processing of about 500,000 badges. Resources are allocated on a workload basis. (This will require 29 person-years and $1.6 million in 1985-86.)

Identification of Health Hazards: A wide variety of chemicals in the environment and in consumer products are assessed for their potential health effects. When warranted, recommendations, guidelines, standards or regulations are developed to prevent health hazards. Data submitted by manufacturers regarding the safety of pesticides with respect to occupational and bystander hazards are evaluated, and recommendations are made to the Department of Agriculture regarding acceptability for marketing. Resources are assigned to these tasks based on workload and priority relative to other sub-activity requirements. (This will require 57 person-years and $4.0 million in 1985-86.)

Device Premarket Review: A very wide variety of devices including some 100 classes of implantable products were subjected to premarket review under the provisions of Part V of the Medical Devices Regulations. Data for 480 devices submitted by manufacturers on tests to establish safety and efficacy were evaluated in 1984-85 and recommendations were made regarding the acceptability of these devices for a Notice of Compliance prior to their general marketing or for Clinical Trials. Criteria for acceptability were developed as new classes appeared on the market. (This activity will require 8 person-years and $400,000 in 1985-86.)

D. National Health Surveillance

Objective

To prepare and disseminate information concerning the health status of the Canadian population; to establish laboratory medicine standards and to provide laboratory diagnostic technologies.

Resource Summary

The National Health Surveillance Activity accounts for approximately 9.5% of total Program expenditures and approximately 9.6% of the total person-years. A breakdown of resources is provided in Figure 10.

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Disease Surveillance	2,560	59	3,192	59	3,269	59
Disease Control Services	6,833	116	6,419	117	5,691	118
Activity Management and Support	1,568	14	1,576	14	1,406	14
	10,961	189	11,187	190	10,366	191

Of the total expenditures, 70.9% is for personnel costs, 20.8% for operations and maintenance and 8.3% for capital costs.

Description

This activity, conducted by the Laboratory Centre for Disease Control, consists of three sub-activities: Disease Surveillance, Disease Control Services, and Activity Management and Support. The latter provides direction, planning and administrative support to the activity as a whole. The other sub-activities are described below.

Disease Surveillance: This sub-activity is concerned with providing epidemiological surveillance and reference information on specific health and disease problems through both collection and evaluation of data and information obtained from other agencies, such as Statistics Canada.

The collected data are employed in a number of strategies to evaluate the occurrence, control and prevention of disease and infection. These strategies include:

- development of surveillance programs on specific disease or disease classes;

- study and evaluation of communicable and non-communicable diseases in hospital, laboratory and community settings;

- development of policies and program options for the control of communicable and non-communicable diseases; and

- development of legislative policy options to control the use of tobacco and cannabis in Canada.

Disease Control Services: This sub-activity contains the laboratory functions associated with disease control and health surveillance.

Some of the strategies employed by this sub-activity are:

- production and marketing of diagnostic microbiological reagents not available commercially for use in hospitals or diagnostic laboratories nationally;

- development of a system of national reference centres for new problem microbiological agents (such as Epstein-Barr virus and the causal agent of Acquired Immunodeficiency Syndrome - AIDS); and

- development of methods and materials for disease diagnosis in conjunction with the development of parameters for the early detect'on of diseases.

Performance Information/Resource Justification

Figure 11 provides summaries of specific outputs for 1985-86 accounting collectively for a majority of the resources available to each sub-activity. In all cases these outputs result from projects allocated less than 20 person-years or costing less than $1 million. Further details of initiatives (see page 5-7) are as follows:

Study of Hospital Acquired Infection Rate: As part of efforts to reduce hospital acquired infections a study of the present situation as regards incidence and types of infection is being undertaken in a number of Canadian hospitals.

Development of Biotechnology: New developments in biotechnology have application to the production of reagents for the diagnosis of infectious disease. The potential exists for the production of previously unavailable reagents and higher quality reagents at lower cost. Two major avenues of biotechnology research already initiated, will be continued and applied to methods of reagent production.

AIDS and Other Sexually Transmitted Diseases: A national committee has been formed to provide a focal point for Canadian efforts to monitor and investigate AIDS. Research into immunology and microbiology of AIDS and other

sexually transmitted diseases will continue to be undertaken by the activity or through contracts. An improved national surveillance system will be expanded to allow trends to be recognized in order to improve control efforts.

Figure 11: National Health Surveillance

Sub-Activity	Resources ($000)	P-Y	Overall Output	Specific Outputs 1985-86
Disease Surveillance	2,560	59	Timely provision of diseases data and guidelines for disease control programs.	o Production of departmental information publications based on the analysis of statistical data from provinces including: - Canada Disease Weekly Report (weekly publication, 6,000 recipients). - Chronic Diseases in Canada (quarterly publication, 3,000 recipients); and - LCDC Newsletter (quarterly publication, 2,000 recipients). o Analysis and production of reports on tuberculosis and sexually transmitted diseases in Canada. o Development and publication of guidelines for disease control programs. o Responses to a projected 60 requests for assistance from provinces to investigate epidemic outbreaks. o Monthly reports to the World Health Organization on an estimated 1,800 annual cases of viral infections in Canada. o A study determining the hospital acquired infection rate and risk factors in selected Canadian hospitals. (See page 5-34.)
Disease Control Services	6,833	116	Production and distribution of diagnostic reagents and provision of national reference services.	o Production and provision of 28,000 vials of microbiological and clinical chemistry reagents to requesting provinces. o Provision of 19 microbiological reference services for commonly occurring microbiological organisms and the establishment of two further reference services. o Development of laboratory technology for rapid diagnosis of infectious diseases. o Production and distribution of 13 proficiency test panels to participating laboratories. o Plan and complete six training courses on biotechnology and diagnostic methodology. o Provision and implementation of safety procedures in laboratory techniques to include 125 tests on 90 safety cabinets within the Health Protection Branch. o Development of two biotechnology methods for the production of diagnostic reagents. (See page 5-34.)

E. Program Administration

Objective

To provide overall direction to, and coordination of program activities, by providing policy advice and direction, planning, financial and administrative services, and financial support services.

Resource Summary

The Program Administration activity accounts for approximately 12.7% of the total Program expenditures and approximately 11.8% of the total person-years. A breakdown of resources is provided in Figure 12.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive	802	13	794	11	961	8
Administrative Support	9,842	141	7,311	139	6,077	143
Scientific Support	4,086	78	4,844	78	3,525	78
	14,730	232	12,949	228	10,563	229
Revenue	24		24		13	

Of the total expenditures 51.0% is for personnel costs, 13.8% for operations and maintenance and 35.2% for capital costs. Revenue is from miscellaneous sources and is not available to the Program as offsets against expenditures (see page 5-43).

Description/Resource Justification

This activity has three sub-activities (Executive, Administrative Support and Scientific Support) which jointly provide central management and support of the other activities of the Health Protection Program.

Organizationally the Executive Sub-Activity corresponds to the Assistant Deputy Minister's Office. The Administrative Support Sub-Activity includes all units of the Finance and Administration Directorate, except for Animal Resources, the Library and Visual Communication, which constitute the Scientific Support Sub-Activity.

Functionally, the Executive Sub-Activity provides program management and coordination with respect to planning, program evaluation, policy development and inter- and intradepartmental, intergovernmental and private sector liaison. The Administrative Support Sub-Activity provides financial and administrative policy, coordination and services. The Scientific Support Sub-Activity provides audio-visual, library and test animal breeding, handling and care services accounting for 27% of the person-year resources of the Activity.

Personnel support is provided by the Administration Program of the Department.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 13: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	67,992	66,436	61,799
Contributions to employee benefit plans	9,518	8,389	9,106
Other Personnel Costs	45	-	-

Operational	111	111	98	13,253	40,676	22,290

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the Program. The current salary range column shows salary ranges by occupational group effective October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and payment divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

	-	5,000	8,000
	70,000	115,000	830,000

[1]The National Food Distribution Centre is a non-profit organization which arranges for the distribution of special foods to Canadians with metabolic abnormalities.

[2]To support the International Program on Chemical Safety in the development of International Chemical Standards which in term support Environmental Quality and Hazards Activity assessment and control of chemical environmental pollutants.

[3]Publications of this Commission are used as a basis for the development of regulations under the Radiation Emitting Devices Act and the Food and Drug Act for radiological material.

B. Cost Analysis

The Program's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered to ascertain the net cost of the Program. These are services provided without charge by other government departments and revenues generated by the Program that are not credited to the Program votes. They include accommodation services ($11.7 million) provided by the Department of Public Works and financial Services ($197,000) provided by the Department of Supply and Services. Figure 18 provides an analysis of the net program cost by activity.

Figure 18: Net Cost of Program by Activity ($000)

	1985-86 Total Program Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost 1985-86	Total 1984-85
Food Safety, Quality and Nutrition	30,914	4,004	34,918	-	34,918	35,147
Drug Safety, Quality and Efficacy	41,204	4,600	45,804	5,261	40,543	41,368
Environmental Quality and Hazards	17,774	1,890	19,664	1,000	18,664	19,052
National Health Surveillance	10,961	1,280	12,241	-	12,241	12,656
Program Administration	14,730	1,573	16,303	24	16,279	14,674
	115,583	13,347	128,930	6,285	122,645	122,897

C.. Revenue Analysis

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend a net amount of $65,234,000 during 1985-86 for the operation of the Income Security Program. This amount is net of estimated expenditures of $39,015,000 for administrative services to be charged to the Canada Pension Plan.

An estimated $10,876,000 in expenditures for employee benefits will be met under existing statutory authority. A portion of these operating expenditures, estimated at $3,493,000 is included in the administrative services that will be charged to the Canada Pension Plan.

Statutory authority also exists for the Program's expenditures on Old Age Security and Family Allowances payments, which are estimated at $15,011,000,000 for 1985-86.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Income Security Program
Expenditure Plan

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- This Program provides Old Age Security payments to some 2.6 million pensioners and Family Allowance payments to agencies, institutions and approximately 3.6 million families on behalf of 6.5 million children (see pages 6-22 and 6-19).

- The beneficiaries of these payments make up approximately 36% of the Canadian population.

- Financial requirements for Old Age Security and Family Allowance payments are expected to be $15.0 billion in 1985-86. This is an increase of $1.2 billion (8.4%) over the prior year.

- Gross operating expenditures are anticipated to be $115 million in 1985-86, an increase of $5.1 million or 4.7% over 1984-85. These expenditures are less than one percent of total Program requirements (see page 6-27).

2. Financial Summary by Activity

Figure 1: Total Program Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Benefit Payments				
- Statutory				
Old Age Security Basic Pension	8,874,000	8,204,000	670,000	
Guaranteed Income Supplement	3,365,000	3,973,000	392,000	
Spouse's Allowance	262,000	252,000	10,000	
	12,501,000	11,429,000	1,072,000	6.22
Family Allowances	3,510,000	2,418,000	92,000	6.19
	15,011,000	13,847,000	1,164,000	
Operating Expenditures				
- All Activities	115,125	110,006	5,119	6.28
	15,126,125	13,957,006	1,169,119	
Less: Revenue Credited to the Vote	39,015	37,629	1,386	
Total Expenditures	15,087,110	13,919,377	1,167,733	
Authorized Person-Years	3,042	2,989	53	

B. Recent Performance

1. Highlights

- The difference between the actual and originally projected statutory payments is due mainly to changes from original forecasts in the Consumer Price Index (see pages 6-19 and 6-23).

- Operating expenditures for the year were approximately $2.9 million more than in Main Estimates (see page 6-29).

- There was a marginal decrease in defined program workload from that anticipated, particularly in the income-tested benefits (see page 6-31).

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance

	1983-84		
	Actual	Main Estimates	Change
Benefit Payments			
- Statutory			
Old Age Security Basic Pension	7,648,959	7,767,000	118,041
Guaranteed Income Supplement	2,524,450	2,859,000	334,550
Spouse's Allowance	232.914	280,000	47,086
	10,406,323	10,906,000	499,677
Family Allowances	2,326,572	2,325,000	(1,572)
	12,732,895	13,231,000	498,105
Operating Expenditures	95,085	92,209	(2,876)
Less: Revenue Credited to the Vote	24,777	28,747	3,970
Total expenditures	12,803,203	13,294,462	491,259
Person-Years	2,856	2,799	(57)

C. Background

1. Introduction

The legislation referred to under the Income Security Program consists of the Family Allowances Act, the Old Age Security Act and specified parts of the Canada Pension Plan. The Income Security Programs Branch of the Department of National Health and Welfare promotes and preserves the social security and social welfare of individuals through the administration of this legislation, through the formulation of policy and legislation, and through the fulfillment of other activities as delegated by the Deputy Minister.

2. Legal Mandate

The legal mandate for this Program is set out in the Canada Pension Plan, the Family Allowances Act, 1973, the Old Age Security Act, and the National Health and Welfare Act. This legislation, except in the case of the incorporating statute, sets out a mandate which, rather than being general and permissive, is largely specific and non-discretionary. Both the determination of monthly benefits and the eligibility for them are defined by the legislation.

3. Program Objective

To maintain and improve the income security of the people of Canada.

4. Program Organization for Delivery

Activity Structure: The Program is subdivided into four activities:

- Canada Pension Plan provides compulsory and contributory earnings-related protection to Canadian wage-earners and their families in the event the Canada Pension Plan contributor reaches age 65, becomes disabled or dies.

- Family Allowances provides financial assistance to families and institutions raising children as part of the overall Child Benefits System.

- Old Age Security provides a basic level of income for older Canadians and additional income assistance for Old Age Security recipients, and their spouses aged 60-64, who have limited income from other sources.

- Program Administration provides overall coordination of program activities by providing policy advice and analysis, planning, financial and administrative services; determines eligibility, processes payments, and maintains and provides information relative to the Canada Pension Plan, Family Allowances and the Old Age Security programs in accordance with the legislation of the Canada Pension Plan, the Family Allowances Act, 1973, the Old Age Security Act and the mandates delegated from the National Health and Welfare Act.

Figure 5: Income Security Program Activity Structure

Organization Structure: The Income Security Programs Branch is under the direction of an Assistant Deputy Minister and is divided into four responsibility areas:

- The Programs Operations Directorate is responsible for the provision of information and counselling services to the public on the terms and conditions of the Old Age Security and Family Allowances programs and on the Canada Pension Plan; for the processing of applications for benefits under these programs; and for the maintenance of beneficiary and contributor accounts. The Directorate carries out its responsibilities through a highly decentralized organization having 305 full- and part-time client-service centres in Canada.

- The Policy, Liaison and Development Directorate is responsible for policy advice and analysis for senior management and the Minister; development of legislation; program planning; the development and analysis of quantitative data to support analysis; and international liaison.

- The Financial Administration Directorate coordinates the preparation of financial estimates and forecasts; informs and advises Branch senior management on the financial aspects and controls of the statutory programs and operating budgets; and provides all financial support services to the Income Security Programs Branch.

- The Branch Administration Directorate is responsible for records management; editing and revision services; affirmative action co-ordination; accommodation; facilities management and material management; official languages; and the operation and maintenance of administrative control systems.

Figure 3: Income Security Programs Branch - Organization

D. Planning Perspective

1. Environment

The most significant environmental factor that will affect this Program is population change. Major demographic changes are taking place in Canada. While birth rates have been declining, the elderly population has increased.

As a result of these changes, it is projected that by the year 2000, 13.2% of the total population will be over age 65 and 21.6% under 18 years of age. This compares with an estimated 10.4% elderly and 26.0% young in the 1985-86 population. Significant deviations from this projection will occur only if there are dramatic changes in such variables as immigration and the numbers of children per family. Figure 4 shows the effect of these demographic changes on the number of children and elderly people over a ten year period from 1981 to 1990.

Figure 4: Number of Children and Elderly people - 1981 to 1990 (000's)

	Under 18		65 and Over	
Year	Number	% of Population	Number	% of Population
81	6845.7	28.1	2360.6	9.7
82	6752.2	27.4	2430.7	9.9
83	6676.0	26.8	2490.9	10.0
84	6631.0	26.4	2551.8	10.2
85	6616.2	26.1	2634.7	10.4
86	6613.3	25.8	2720.9	10.6
87	6611.1	25.6	2810.8	10.9
88	6596.2	25.3	2893.5	11.1

90	6565.4	24.7	3058.2	11.5

Source: Statistics Canada, Population of Canada.

2. New Initiatives

During 1985-86, the Program will undertake or continue the following initiatives:

Income Security Programs Development: There is a recognized need to update, improve and incorporate technological advances in the Income Security Program delivery systems in order to provide improved service to the public, increase overall efficiency and limit administrative costs. In 1984-85, the design of a project to consolidate, integrate and modernize the delivery procedures and systems for all three Income Security Programs was initiated. A project plan and schedule have been developed and systems design and an organizational plan should be completed for review in 1985-86.

Toll Free Service: The Branch has an extensive network of offices across the country. Most Canadians may obtain program information or advice without charge. However, those outside the local calling area pay long distance charges for telephone access. Upon the recommendations of the Task Force on Service to the Public, the Branch is searching for economic ways of providing toll free service and will extend such service as resource availability permits.

During 1984-85, toll free service was implemented in northern remote areas. In addition, this service was extended in a province-wide pilot in Manitoba. Subsequent to evaluation after one year and as resource availability permits, consideration will be given to extending toll free service in other provinces and/or areas.

Improvements in Administration: Branch management, through internal reviews, examination of audit reports and redefinition of managerial expectations, is continually seeking to improve the administrative performance of the Branch. Projects underway at present include the design of a new automated, integrated management information system and a records management improvement project.

3. Update on Previously Reported Initiatives

To reform the pension system: The Income Security Programs Branch will continue to be involved in pension reform activities.

To improve the income situation of the elderly through improvements to the Guaranteed Income Supplement: In June 1984, legislation was passed which increased some of the benefits under the Guaranteed Income Supplement Program.

To improve disability benefit protection to disabled Canadians: The report of the Joint Federal/Provincial Study of a Comprehensive Disability Protection Program, was completed in September 1983, and submitted to federal and provincial Ministers. The Ministers agreed that the Study Group should undertake further developmental work and this is underway.

To improve the Income Security protection provided to migrants: The Branch is continuing to negotiate international social security agreements that ensure the continuity of social security protection for migrants and to coordinate Canada's income security programs and those of other countries. Agreements are in effect with France, Greece, Italy, Jamaica, Portugal and the United States. Discussions are underway towards agreements with a number of additional countries, and others will be started in the year ahead.

Reorganization of the Ontario and Nova Scotia Regional Offices: In 1982, it was announced that Family Allowances and Old Age Security operations for Ontario would be decentralized to Chatham, Peterborough and Timmins, with a unit to remain in Toronto. Canada Pension Plan operations for Ontario will be decentralized from the National Capital Region to co-locate with the other programs at the above four locations. These moves will allow for further integration of the delivery systems for the three programs. The Branch's planned relocation of the regional office for Nova Scotia from Halifax to Sydney has been cancelled.

Canada Pension Plan Contributor Information Program: Since 1966 Canadians have been making compulsory contributions to the Canada Pension Plan based upon their insured earnings. There is a need for a program to notify individuals of their contributions so that timely corrections could be made in case of error and, as well, to increase public knowledge of benefits available under the Plan. In 1983 a pilot project was implemented and the result in 1984-85 was full implementation of a regular program. The impact of the resulting increased workload has not been fully evaluated as yet but monitoring mechanisms are in place.

Control Programs: The framework has been developed for a more effective control program to ensure that individual statutory payments made under the Income Security Program are paid only to eligible recipients and in the correct amount. The improved control program may be implemented as an ongoing function.

4. Program Effectiveness

Over 99% of the population aged 65 or over apply for and receive basic Old Age Security benefits. Close to 90% of the eligible Guaranteed Income Supplement population and over 98% of the eligible Spouse's Allowances population receive benefits. The Family Allowances take-up rate is also estimated to be well over 99%. The high degree of program take-up indicates the benefits are reaching the people they were designed to serve.

One of the roles of the Old Age Security program is to provide a basic level of income for older Canadians. This serves as the basis for other retirement income. A survey of OAS beneficiaries conducted by the Branch indicates that over 35% of the total income from all sources received by the elderly comes from OAS and GIS benefits. That fact, coupled with the high degree of take-up noted above, demonstrates that the program successfully fulfills its mission.

Research conducted by the Branch points to the success of the Canada Pension Plan in meeting its objectives. Close to 1.75 million Canadians will be in receipt of CPP benefits in the 1985-86 fiscal year. A survey of CPP disability recipients indicated that CPP benefits represented the most important source of their income and accounted for close to a third of all the income reported. A further survey of CPP retirement beneficiaries indicated that CPP benefits represented the third most important source of retirement income, following OAS benefits and income from investments. For persons receiving CPP survivor benefits, the payments make up about one out of every six and a half dollars of income.

Section II
Analysis by Activity

A. Canada Pension Plan

Objective

To provide compulsory and contributory earnings-related protection to Canadian wage earners and their families in the event the Canada Pension Plan contributor reaches age 65, becomes disabled or dies, in compliance with the responsibilities assigned to the Minister of Health and Welfare by the Canada Pension Plan legislation.

Resource Summary

Operating expenditures are detailed under the Program Administration Activity.

Note: For further details of the Canada Pension Plan, refer to pages 6-39 to 6-52.

Relationship of the Canada Pension Plan to the Program

Canada Pension Plan benefit payments and administrative expenses are funded from compulsory contributions by the self-employed, employers, employees and from the income earned by the CPP Investment Fund. The CPP is administered by the federal government and the administrative costs incurred are charged to the Plan.

B. Family Allowances

Objective

To financially assist families and institutions raising children as part of the overall Child Benefits System.

Resource Summary

Family Allowances expenditures, which are estimated at $2.5 billion in 1985-86, account for 17% of total Program expenditures. Figure 6 provides the benefit payment expenditures. Operating expenditures are detailed under the Program Administration Activity.

Figure 6 : Family Allowances Benefit Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Benefit payments	2,510,000	2,418,000	2,326,572

The forecast increase of $92 million or 3.8% in benefit payments between 1984-85 and 1985-86 is due to an increase of $1.41 in the average monthly rate (from $30.57 to $31.98) due to cost of living indexing. This is slightly offset by a decrease in population of 52,882 children (from 6,592,281 to 6,539,399).

Past Financial Performance

Figure 7 shows actual compared to originally estimated benefit payments for the Family Allowances Activity. Operating expenditures are detailed under the Program Administration Activity.

Figure 7: 1983-84 Family Allowances Benefit Payments ($000)

	1983-84		
	Actual	Main Estimates	Change
Benefit payments	2,326,572	2,325,000	(1,572)

The increase in benefit payments of $1.6 million is due to a higher than anticipated number of eligible children partly offset by a slight decrease from the anticipated average monthly rate.

Description

The Department pays Family Allowances monthly on behalf of children under the age of 18 who are resident in Canada and who are maintained by parents or guardians who also meet certain residence requirements. The Allowance is normally paid to the mother. Special Allowances are paid on behalf of children under 18 who are maintained by welfare agencies or government departments and institutions. Currently, the Program is making payments on behalf of 6.5 million children.

Resource Justification - Benefit Payments

The major variables affecting total expenditures are the average number of recipients and average monthly payments. Figure 8 shows the trend in numbers of eligible children and the number of recipient families over a five year period.

Figure 8: Family Allowances - Trends in the Number of Eligible Children and Recipient Families

Controllable Variables: The primary controllable variables which affect total payments are the amount of monthly benefits, the eligibility criteria for receiving benefits and inflation. Figure 9 provides a five year summary of the standard and special Family Allowances monthly benefits paid by the federal government.

Figure 9: Family Allowances - Summary of Federal Monthly Benefits

Calendar Year	Family Allowances	Special Allowances
	$	$
1981	23.96	33.53
1982	26.91	37.65
1983	28.52	41.87
1984	29.95	44.68
1985	31.33	46.74

Notes:
1. Benefits are escalated annually on January 1.
2. Information for calendar year 1985 is a projection.
3. The Child Tax Credit payable in 1983 and 1984 has been increased to $343.00 to offset limitations of the 6% and 5% indexation in Family Allowances.

Provinces may vary the amount of Family Allowances which the federal government pays to their residents according to the age and/or number of children in each family. Over a four-year period, the average benefit must equal the national rate and individual payments must be at least 60% of the federal rate per child. Currently, Alberta varies the rate according to the age of the child, while Quebec varies the rate according to both the age of the child and number of children in a family.

C. Old Age Security

Objective

To provide a basic level of income for older Canadians and additional income assistance for Old Age Security recipients, and their spouses aged 60-64 who have limited income from other sources.

Resource Summary

Old Age Security expenditures are estimated at $12.5 billion for 1985-86. These expenditures account for 83% of total Income Security Program expenditures. Figure 10 shows the financial resources required for the three types of Old Age Security benefits. Operating expenditures are detailed under the Program Administration Activity.

Figure 10: Old Age Security Benefit Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Benefit Payments			
Basic Pension	8,874,000	8,204,000	7,648,959
Guaranteed Income Supplement	3,365,000	2,973,000	2,524,450
Spouse's Allowance	262,000	252,000	232,914
	12,501,000	11,429,000	10,406,323

Explanation of changes between 1984-85 and 1985-86:

Basic Pension increase of $11.52 in the average monthly rate (from $270.68 to $282.20) due to inflation, and an increase in population of 94,705 beneficiaries (from 2,525,835 to 2,620,540).

Guaranteed Income Supplement increase of $20.53 in the average monthly rate due to inflation, changes in legislation and an increase in population of 31,758 beneficiaries (from 1,254,119 to 1,285,877).

Spouse's Allowance increase of $7.02 in the average monthly rate due to inflation and an increase in population of 882 beneficiaries (from 90,860 to 91,742).

Past Financial performance

Figure 11 compares actual to originally estimated benefit payments for the Old Age Security Activity. Operating expenditures are detailed under the Program Administration Activity.

Figure 11: 1983-84 Old Age Security Benefit Payments ($000)

	1983-84		
	Actual	Main Estimates	Change
Benefit Payments			
Basic Pension	7,648,959	7,767,000	118,041[1]
Guaranteed Income Supplement	2,524,450	2,859,000	334,550[2]
Spouse's Allowance	232,914	280,000	47,086[3]
	10,406,323	10,906,000	499,677

1 The actual Basic Pension was $1.46 less than the average monthly rate (from $260.06 to $258.60). This was due to lower than anticipated rates of inflation and a decrease in population of 24,323 beneficiaries (from 2,488,824 to 2,464,501).

2 The Guaranteed Income Supplement average monthly rate was $19.52 less than the anticipated rate (from $190.84 to $171.32). This was due to lower than anticipated rates of inflation, higher than anticipated average incomes of the beneficiaries and a lower than anticipated population of beneficiaries (from 1,248,364 to 1,227,810).

3 The Spouse's Allowance average monthly rate was $26.04 less than anticipated (from $251.32 to $225.28). This was due to lower than anticipated rates of inflation, higher than anticipated average incomes of the beneficiaries and a lower than anticipated population of beneficiaries (from 92,800 to 86,182).

Description

Three kinds of Old Age Security benefits are payable, as follows:

Basic Pension: The basic Old Age Security pension is a monthly benefit paid to persons aged 65 and over who apply for it and who satisfy certain residence requirements. Ninety-nine percent of the population aged 65 and over receive this benefit. The amount of the pension may be full or partial depending on the previous periods of residence.

Guaranteed Income Supplement: Old Age Security pensioners with limited income apart from the basic pension may receive a Guaranteed Income Supplement. The amount of the supplement varies according to the reported income of the pensioner for the previous calendar year.

Spouse's Allowance: This income-tested monthly allowance is available to Old Age Security pensioners' spouses who are 60 to 64 years old and who meet the residence requirements that apply to the basic pension. The allowance also varies according to the reported income of the couple from the previous year.

Of the 2.6 million persons who will receive Old Age Security benefits in 1985-86, 1.3 million will receive the Guaranteed Income Supplement and 92,000 will receive the Spouse's Allowance.

Resource Justification - Benefit Payments

Recipients and Average Monthly Benefits: In Figure 12, the main variables that affect total expenditures are summarized in two statistics: the average number of recipients and the average monthly benefits. This Figure illustrates the trend in these two statistics as well as total expenditures over a five-year period for each of the three components of Old Age Security.

Figure 12: Old Age Security - the Number of Beneficiaries, Average Monthly Benefits and Total Expenditures

Controllable Variables: Several of the variables that influence the total benefits displayed in Figure 13 cannot be controlled. Such variables include changes in target populations, as well as inflation and interest rates which affect average monthly benefits. However, Parliamentary control can be exercised over the rate of maximum monthly benefits and eligibility for benefits.

Figure 13: Old Age Security - Summary of Maximum Monthly Benefits* ($)

Fiscal year	Basic Pension	Guaranteed Income Supplement Single	Guaranteed Income Supplement Married	Spouse's Allowance
Estimates 1985-86				
January 1, 1986	287.75	341.99	222.73	510.48
October 1, 1985	285.47	339.28	220.96	506.43
July 1, 1985	282.64	335.92	218.78	501.42
April 1, 1985	278.47	330.95	215.54	494.01
Actual (Annual Average)				
1984-85	270.84	303.41	209.64	480.48
1983-84	258.78	259.99	200.47	459.25
1982-83	242.60	243.72	187.92	430.53
1981-82	218.13	219.00	168.85	386.98

*Benefits are adjusted quarterly (or indexed) to reflect increases in the Consumer Price Index.

D. Program Administration

Objective

To provide overall direction and coordination of program activities by providing policy advice and analysis, planning, financial and administrative services; to determine eligibility, to process payments and to maintain and provide information relative to the Canada Pension Plan, Family Allowances and Old Age Security programs; and to do so in accordance with the legislation of the Canada Pension Plan, the Family Allowances Act, 1973, the Old Age Security Act and the mandates delegated from the National Health and Welfare Act.

Resource Summary

Total operating expenditures shown in Figure 14 are expected to increase $5.1 million or 4.7% between 1984-85 and 1985-86.

Figure 14: Program Administration Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating Expenditures			
Personnel	89,358	83,541	78,166
Goods and Services	24,567	24,858	15,700
Capital	1,200	1,492	893
Transfer Payments	-	115	326
Total Operating Expenditures	115,125	110,006	95,085
Less: Revenue Credited to the Vote	39,015	37,629	24,777
Net Operating Expenditure	76,110	72,377	70,308

The increase of $5.1 million in total operating expenditures between 1984-85 and 1985-86 is due to:

	($000)
• Workload increases	1,008
• Reorganization of Ontario and Nova Scotia Regional Offices	1,866
• CPP Contributor Information Program	1,078
• Cost increases for personnel and goods and services	4,850
• ISP Development Project	(1,899)
• Information Campaign	(559)
• Information reduction	(766)
• General reduction	(180)
• Miscellaneous	(279)
Total Change	5,119

Past Financial Performance

Figure 15 shows actual compared to originally estimated operating expenditures for the Program Administration Activity.

Figure 15: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Operating Expenditures			
Personnel	78,166	76,368	(1,798)
Goods and Services	15,700	15,480	(220)
Capital	893	361	(532)
Transfer Payments	326	-	(326)
Total Operating Expenditures	95,085	92,209	(2,876)[1]
Less: Revenue Credited to the Vote	24,777	28,747	3,970
Net Operating Expenditures	70,308	63,462	(6,846)

1 Actual expenditures turned out to be $2.9 million or 3.1% higher than anticipated due to:

	($000)
• Expenditures for the following projects for which funding has been approved through Supplementary Estimates:	
-ISP Development	(602)
-Reorganization of Ontario and Nova Scotia regional offices	(2,312)
-Control Programs	(363)
-NEED Program	(326)
• Administrative restraint measures and internal reallocations	886
• Miscellaneous	(159)
Total Change	(2,876)

Description

The Program Administration Activity encompasses:

- the development and provision of plans and policy advice for the Minister and Senior Management;
- the determination of benefit entitlement;
- the processing of payments for beneficiaries; and
- the maintenance and provision of information relative to the Income Security Program.

Performance Information/Resource Justification

The human resource requirements and performance information are presented in two ways - by Activity and by Function. (See pages 6-31 and 6-33)

Activity Information: The workload for each "program" Activity, Canada Pension Plan, Family Allowances and Old Age Security, is measured in terms of the accounts maintained. The numbers reflect the volumes as well as the relative complexity of the various benefit types. The resources include both the direct costs, such as those spent on processing the applications, and the indirect costs for overhead.

Figure 16: Program Performance

	Estimates 1983-84	Forecast 1983-84	Actual 1983-84	Change	Forecast 1984-85	Estimates 1985-86	Change
Workload[2]							
Canada Pension Plan (benefits)	1,068	1,064	1,055	(9)	1,132	1,215	83
Family Allowances (accounts)	678	677	676	(1)	675	674	(1)
Old Age Security (weighted accounts)	1,441	1,425	1,410	(15)	1,442	1,491	49
Program Workload	3,187	3,166	3,141	(25)	3,249	3,380	131
Resources (person-years)							
Canada Pension Plan	810	931	902	(29)	961	985	24
Family Allowances	675	647	635	(12)	651	659	8
Old Age Security	1,314	1,337	1,319	(18)	1,377	1,398	21
Program Resources (person-years)	2,799	2,915	2,856	(59)	2,989	3,042	53
Efficiency[3]							
Canada Pension Plan	131.85[1]	114.29	116.96[1]	2.67	117.79	123.35	5.56
Family Allowances	100.44	104.64	106.46	1.82	103.69	102.28	(1.41)
Old Age Security	109.67	106.58	106.90	0.32	104.72	106.65	1.93
Program Efficiency	113.86	108.61	109.98	1.37	108.70	111.11	2.41

1 The change in efficiency is due mainly to the addition of person-years, acquired through Supplementary Estimates, for the decentralization and relocation of regional offices.

2 Expressed in "person-years of work".

3 Expressed in index form relative to the base year 1979-80, at 100% productivity.

Program Performance: Program workload in 1983-84 was 0.79%, below the projected level. Resource utilization was 2.02% below forecast. The resulting Program efficiency was 109.98%, relative to the base-year 1979-80 at 100%, an increase of 1.37% from the forecast.

Person-year resources will increase by 4.70% between 1983-84 and 1984-85 and by 1.77% in 1985-86. Workload will increase by 3.4% between 1983-84 and 1984-85 and by 4.0% in 1985-86. Due to the decentralization and relocation of regional offices, efficiency is predicted to decrease for the Program by 1.28% between 1983-84 and 1984-85 and subsequently increase by 2.41% as costs diminish.

Canada Pension Plan (CPP): Two hundred and sixty five thousand (265,000) applications for Canada Pension Plan benefits were received in 1983-84: 32% were for retirement pension, 26% were for disability pension and related benefits, 16% for surviving spouse's pension, 4% for orphan's benefits and 22% for death benefits. The number of applications is slightly higher than expected mainly due to disability benefits which were 3% higher than originally forecasted.

Beneficiary Account Maintenance: In 1983-84, a total of 1,578,000 benefits were maintained in regular pay (992,000 retirement benefits, 157,000 disability, 328,000 surviving spouses and 101,000 orphans). Eligible accounts have to be paid regularly and the account information must therefore be maintained.

Record of Earnings: Eligibility for and the amount of CPP benefits depends upon the applicant's record of contributions and earnings. During the 1983 tax year, 8 million persons contributed to CPP. By March 1984, there were 16 million active accounts against which a total of 20 million transactions were processed during 1983-84.

General Results: The actual workload in CPP for 1983-84 was within 1% of the forecast. Resources required were well below planned levels, resulting in a higher than anticipated efficiency level.

Family Allowances (FA):

Applications for Benefits: During 1983-84, 406,000 applications for Family Allowance Benefits were received.

Beneficiary Account Maintenance: As forecast, almost 3,637,000 Family Allowances accounts were paid in 1983-84. The preponderance of benefits are paid directly to families, with only 1% going to child maintenance agencies and foster parents. Account information is maintained in order to ensure that those who are eligible continue to receive the payments regularly.

General Results: The 1983-84 workload in Family Allowances was within 0.1% of the original forecast while resource utilization was lower. These two factors resulted in increased productivity.

Old Age Security (OAS):

Applications for Benefits: In 1983-84, approximately 313,000 new applications for OAS benefits, Guaranteed Income Supplement (GIS) and Spouse's Allowances (SPA) were processed. There were 1,300,000 applications for the renewal of GIS.

Beneficiary Account Maintenance: In 1983-84, 1.2 million OAS-basic accounts, 1.2 million OAS/GIS accounts and 86,000 SPA accounts were maintained. A considerable number of maintenance actions were processed.

General Results: The workload in Old Age Security for 1983-84 was 1% below the original forecast. The drop in workload was associated with a corresponding drop in resource utilization causing the efficiency to remain as planned.

Function Information: The work activities of the Income Security Programs Branch are categorized into five main areas of endeavour: Client Services, Claims Processing, Operations Support, Policy Support, and Management and Administration.

Figure 17: Person-year Information by Function

	Estimates 1983-84	Forecast 1983-84	Actual 1983-84	Change	Forecast 1984-85	Estimates 1985-86	Change
Client Services	698	687	678	(9)	682	683	1
Claims Processing	993	975	936	(39)	967	980	13
Operations Support	917	1,059	1,055	(4)	1,145	1,176	31
Policy Support	47	45	43	(2)	45	50	5
Management and Administration	144	149	144	(5)	150	153	3
Total Person-Years	2,799	2,915	2,856	(59)	2,989	3,042	53

Client Services: Client Services includes the provision of program information, guidance and assistance to the general public. To ensure that the public has adequate access to these services there are 65 full-time and 240 part-time offices. To increase public awareness, booths are displayed at exhibitions, at fairs and in shopping centres. In addition, Branch staff members appear on radio and television shows and pre-retirement seminars and speeches are given.

Claims Processing: This function encompasses the determination of eligibility, the calculation of entitlements, and the payment and control of the benefits.

Operations Support: Operations Support primarily services the processing units. It includes maintaining indexes of applicant and beneficiary names, addresses and account numbers; sorting and delivery of mail, ensuring that all correspondence on an existing account has the correct account number; creating and maintaining files on all applications and benefits; microfilming files for more efficient storage and use by the program analysts; provision of word-processing services for correspondence with applicants and beneficiaries and data processing benefit files from which benefit cheques are issued.

Policy Support: Policy Support consists of the provision of analysis and advice to the Minister and senior management on matters related to the objectives, results and impacts of the Income Security Program's existing legislation, on proposals for change, and on social security matters in general and, program planning and international liaison.

Resource expenditures on Policy Support are included under "Program Administration".

Management and Administration: The management and administration function includes the activities of the senior management of all the Branch and its support groups. These costs in 1983-84 account for 5% of the total resources in Income Security Programs. For the fiscal years 1984-85 and 1985-86 this percentage will not increase.

Section III
Supplementary Information

A. Analysis by Object

1. Objects of Expenditure

Figure 18: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Benefit Payments			
Grants	15,011,000	13,847,000	12,732,895
Operating Expenditures

Operational	6	7	8	13253 - 40676	19,157

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Income Security Programs Branch received authorization from Canada Employment and Immigration Commission's New Employment Expansion and Development (NEED) Program to undertake, in 1983-84 and 1984-85, a project for the improvement of FA files. Details of related transfer payments are displayed in Figure 20.

Figure 20: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
NEED Program	-	115	326

4. Cost Analysis

The 1985-86 Estimates include only those budgetary expenditures expected to be incurred and charged to the Program's voted and statutory appropriations. Other items must be included when showing the cost of the Program. Figure 21 shows the net cost of the Program after services provided without charge by other departments have been added and after revenues credited to the Consolidated Revenue Fund that relate to recovery of the Canada Pension Plan administrative expenditures have been deducted.

Figure 21: Net Cost of Program ($000)

	Estimates 1985-86	Forecast 1984-85
Benefit Payments	15,011,000	13,847,000

Section I
Canada Pension Plan Overview

A. Description of Plan

1. Introduction

The Canada Pension Plan (CPP) is a compulsory, contributory social insurance plan which enables members of the labour force to acquire and retain protection for themselves and their families against loss of income due to retirement, disability or death. Currently, approximately 9 million Canadians contribute to the Plan and approximately 1.7 million people receive benefits.

The Plan began in 1966 and covers all of Canada except the province of Quebec which has its own plan, the Quebec Pension Plan. All benefits and administrative costs are financed from contributions received and the interest earned by the CPP Fund. Any changes to the general level of benefits or the rate of contributions require an Act of Parliament plus the agreement of at least two thirds of the ten provinces having not less than two thirds of the population. In addition, changes of this kind require three years of notice before coming into force unless notice is waived by the provinces.

2. Contributions

Most employees and self-employed persons between the ages of 18 and 65 must contribute to the Plan. Contributions are made on annual employment earnings between a minimum level known as the Year's Basic Exemption and a maximum called the Year's Maximum Pensionable Earnings ($2,300 and $23,400 respectively for calendar year 1985). Employees contribute at the rate of 1.8% of earnings within this range with a matching contribution by the employer. The self-employed pay the combined rate of 3.6%.

3. Benefits

There are three categories of benefits: retirement pensions, survivors' benefits, and disability benefits. Retirement pensions are paid to contributors who are 65 years of age or over. Survivors' benefits are paid to surviving spouses of deceased contributors and on behalf of their dependent children. A lump sum death benefit is also payable. Disability benefits are payable to contributors under age 65 with prolonged and severe disabilities and on behalf of their dependent children.

B. Operation of the Plan

As required by the CPP legislation, the federal government operates the Plan through the CPP Account and the CPP Investment Fund.

1. Canada Pension Plan Account

The CPP Account is credited with all contributions received and interest earned and is charged with all benefits paid and administrative expenses. Any monies on hand in the Account in excess of operating needs for the next three months are invested on behalf of the Fund.

2. Canada Pension Plan Investment Fund

The amounts invested constitute the CPP Investment Fund. Investments in provincial and federal government securities are made with the cash on hand in excess of the three month operating requirement. The amount made available to each province is based on the proportion of total contributions made by residents of each province during the previous ten year period. Funds not borrowed by the provinces are invested in Federal securities. Interest earned on the investments is credited to the CPP Account.

3. Departmental Responsibilities

While the CPP legislation assigns to the Minister of National Health and Welfare the responsibility for reporting on the operations and status of the Plan, six other departments also participate in the administration of the Plan. These other participants are National Revenue, Supply and Services, Public Works, Employment and Immigration, Finance, and Insurance. Finance is responsible for investing the Account's excess monies. The major responsibilities of the other participating departments in respect of the CPP are outlined on page 6-54. Costs incurred in administering the Act are recoverable from the Account. Accordingly, the Departments concerned are accountable both for the services they provide and for the amounts they recover from the Account. For convenience, presentation of the full report on the CPP is included as a part of the Estimates of the Department of National Health and Welfare.

C. Financial Summary

Figure 22 summarizes the forecast receipts, expenditures and the change in the balance of the Canada Pension Plan Account for fiscal year 1985-86.

Figure 22: Canada Pension Plan Account - Summary Statement of Transactions ($ millions)

	Forecast 1985-86	Forecast 1984-85	Change	Actual 1983-84
Receipts				
Contributions	4,700	4,300	400	3,716
Interest	3,100	2,900	200	2,534
	7,800	7,200	600	6,250
Disbursements				
Benefit payments	5,192	4,323	869	3,657
Administrative expenses	119	112	7	89
	5,311	4,435	876	3,746
Increase in Account balance	2,489	2,765	(276)	2,504
Opening balance	29,377	26,612	2,765	24,108
Closing balance*	31,866	29,377	2,489	26,612
*Closing balance comprises:				
Canada Pension Plan Investment Fund	30,021	27,771	2,250	25,305
Operating balance	1,845	1,606	239	1,307

D. Highlights of Financial Change

- The balance in the Canada Pension Plan Account at the end of fiscal year 1985-86 is expected to increase by more than $2.4 billion to $31.9 billion.
- The annual rate of increase in the balance will decrease from 10.4% in 1984-85 to 8.5% in 1985-86.
- Receipts are projected to increase by 8.3% in 1985-86 compared to 15.2% in 1984-85.
- Disbursements for benefit payments and administrative expenses are forecast to rise by 19.7% in 1985-86 compared to 18.4% in 1984-85.

E. Long Term Financial Implications

The current CPP contribution rate has remained unchanged since the Plan's inception in 1966. The rate established was expected to produce receipts that would be more than sufficient to meet benefit payments and administrative expenses for about the first 15 years of operation. It was recognized from the outset that the contribution rate would eventually have to be increased and that the amount of such increase would depend on the experience of the Plan, the funding objectives and any amendments that might be made to the Plan.

The report of the Chief Actuary, Department of Insurance, on the financial condition of the Plan (Statutory Actuarial Report No. 8 as at December 31, 1982) confirms these original expectations.

In order to show the long term financial implications of the current contribution rate and benefit payment structure, the Chief Actuary, in his Report No. 8 makes a projection concerning the behaviour of the Plan based on the assumption that contributions continue as long as possible at the present statutory rate of 3.6% of contributory earnings and there are no changes to the benefit payment structure. Under this assumption, there are three phases to the evolution of the Plan, each culminating in a "Critical Year".

Critical Year No. 1 - 1985: This is the year when all of the contributions received by the Plan will be needed to meet the benefit payments. If a funding approach was adopted whereby contributions would continue to match benefit payments, the contribution rate would have to commence to increase at this time.

Critical Year No. 2 - 1994: This is the year when total current year contributions and interest income would be needed to pay benefits and administrative expenses. If, at this point the rates were to be adjusted to maintain equality between CPP expenditures and current contributions plus interest income, the Fund balance would remain at around $45 billion indefinitely. If the rates were not changed, the assets of the Fund would begin to decline.

Critical Year No. 3 - 2004: This is the projected year in which, assuming again that no changes had occurred to the current contribution rate, the fund would be finally exhausted. Contribution rates would then have to be changed to provide at least enough receipts to meet obligations on a pay-as-you-go basis.

Section II
Canada Pension Plan Receipts

Receipts of the Canada Pension Plan are from two sources:

A. Contributions
B. Interest from Investments

A. Contributions

1. Financial Summary

Contributions to the Plan in 1985-86 are expected to make up 60% of all receipts.

Figure 23: Contribution Receipts ($millions)

	Forecast 1985-86	Forecast 1984-85	Change	Actual 1983-84
Contributions	4,700	4,300	400	3,809

The forecast increase in contributions of $400 million or 9.3% from 1984-85 to 1985-86 is due to:

- a net increase of 100,000 contributors (from 8,300,000 to 8,400,000); and
- an increase of $41.45 in the average annual contribution of each contributor (from $518.07 to $559.52).

2. Variables Affecting the Total Amount of Contributions

The two main variables that affect the total amount of contributions are the number of contributors and the average annual contribution of individual contributors. Figure 24 shows the trends over a five year period in the number of contributors and the total amount of contributions made to the CPP.

Figure 24: Trends in the Number of Contributors and Contributions

The main reason for the rapid increase in average annual contributions is that the maximum amount of earnings on which contributions must be made is increasing at the rate of about 12.5% per annum. This is due to a provision in the CPP introduced in 1974 that maximum pensionable earnings be increased 12.5% per year until they catch up to the industrial composite of average wages and salaries. The other contributing factor is the rising incomes of working Canadians over this period.

Figure 25 shows the level of earnings subject to contribution and the maximum contributions that are currently in effect.

Figure 25: Earnings Subject to Contribution and Maximum Contribution($)

Year's	Maximum Pensionable Earnings	Year's Basic Exemption	Earnings Subject to Contribution	Maximum Employee's or Employer's Contribution	Maximum Self-Employed Contribution
1985	23,400	2,300	21,100	379.80	759.60
1984	20,800	2,000	18,800	338.40	676.80

B. Interest From Investments and Operating Balance

Interest income from investments in federal and provincial securities and the operating balance accounts for 40% of the total receipts of $7.8 billion forecast for 1985-86.

Figure 26: Interest Income ($millions)

	Forecast 1985-86	Forecast 1984-85	Change	Actual 1983-84
Interest From Investments	2,970	2,735	235	2,423
Operating balance	130	165	(35)	111
	3,100	2,900	200	2,534

Section III
Canada Pension Plan Disbursements

A. Benefit Payments

1. Introduction

Of the 1.7 million people of all ages who currently receive CPP benefits, just over one million receive retirement pensions, close to 355,000 receive surviving spouse's benefits and over 125,000 receive disability pensions. In addition, almost 225,000 dependent children of deceased or disabled contributors qualify for monthly flat rate benefits.

2. Description of Benefits

(a) Retirement Pension

Contributors to the Plan who are 65 years of age or over are eligible upon application to receive a monthly retirement pension. The maximum monthly amount of the pension is based on 25% of the average of the Year's Maximum Pensionable Earnings for the year in which the benefit becomes payable and the two previous years.

A person's retirement pension may be less than this amount if actual annual pensionable earnings were less than maximum annual pensionable earnings during the individual's contributory period, or if the length of time during which contributions were made is less than the minimum of 120 months.

(b) Survivors' Benefits

Surviving Spouses' Benefits: Monthly pensions are paid to eligible surviving spouses upon application if the deceased contributor made contributions to the Plan for a minimum qualifying period. The eligibility for benefits and the amount of such benefits are affected by the age and health of the survivor and whether or not dependent children of the deceased contributor are being maintained.

Orphans' Benefits: Flat-rate amounts are paid upon application, on behalf of a deceased contributor's children until the children reach age 18 or, if full time students, up to age 25.

Death Benefits: A lump sum death benefit is paid upon application. The amount of the benefit is the lesser of six times the monthly retirement benefit imputed to the contributor at the date of death or 11% of the maximum pensionable earnings for the year in which death occurs. Payment is normally made to the contributor's estate.

(c) **Disability Benefits**

Disability Pensions: Provided that contributions have been made for a minimum qualifying period, a person who has a prolonged and severe mental or physical disability is entitled, upon application, to a disability pension. The amount of the pension consists of a flat-rate amount, plus 75% of the contributor's retirement pension calculated at the time that the disability occurs.

Benefits to Children of Disabled Contributors: All provisions that apply to orphans' benefits also apply to benefits paid on behalf of disabled contributors' children.

All of the monthly benefits are adjusted annually in accordance with changes in the Consumer Price Index.

3. Financial Requirements

Figure 27 shows the financial requirements for each of the three benefit categories and, where applicable, the individual types of benefits within these categories.

Figure 27: Benefit Payments by Category and Type ($millions)

	Forecast 1985-86	Forecast 1984-85	Change	Actual 1983-84
Retirement pensions	3,469	2,842	627	2,379
Survivors' benefit				
Surviving spouses' benefit	813	692	121	591
Orphans' benefits	111	108	3	105
Death benefits	110	92	18	78
	1,034	892	142	774
Disability benefits				
Disability pensions	617	527	90	444
Benefits to children of disabled contributors	72	63	9	54
	689	590	99	498
	5,192	4,324	868	3,651

4. Explanation of Change in Financial Requirements

The overall increase is primarily due to increases in the average amount payable for each type of benefit which accounts for $581 million of the overall increase of $868 million and to the continuing growth in the number of beneficiaries which accounts for a further $287 million.

Figure 28 provides further details of these changes for the three largest types of benefits.

Figure 28: Highlights of Financial Changes ($millions)

Reasons for Change		Change
Retirement pension	- An increase of $35.28 in the average monthly benefit (from $225.29 to $260.57)	463
	- Growth of 58,282 in the average number of beneficiaries (from 1,051,211 to 1,109,493)	164
		627
Surviving spouse's pension	- An increase of $12.27 in the average monthly benefit (from $161.29 to $173.56)	55
	- Growth of 32,746 in the average number of beneficiaries (from 357,596 to 390,342)	66
		121
Disability pension	- An increase of $29.09 in the average monthly benefit (from $348.07 to $377.16)	46
	- Growth of 10,092 in the average number of beneficiaries (from 126,146 to 136,238)	44
		90

5. Variables Affecting Total Benefit Payments

Canada Pension Plan benefits are based on earnings, a flat-rate amount, or a combination of the two. Total flat rate benefits and flat-rate components of benefits vary with the number of beneficiaries and changes in the Consumer Price Index. For benefits that are earnings-related, additional variables are changes in the maximum amount of earnings upon which benefits are based and changes in the actual amount of contributors' earnings. It is because of these variables that new beneficiaries are receiving higher average monthly benefits than existing beneficiaries.

B. Administrative Expenses

Administrative expenses for 1985-86 are estimated at $119 million. This represents an increase of 6.0% over those forecast for 1984-85.

Figure 29: Administrative Expenses ($000)

Department	Type of Administration Service	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Revenue	Collection of contributions	58,764	54,208	45,278
Health and Welfare	Plan administration, operations, records, etc.	40,539*	39,180	26,565**
Supply and Services	Cheque issue and EDP services	14,122	12,868	11,549
Public Works	Accommodation	2,753	2,635	2,416
Employment and Immigration	Assignment of Social Insurance Numbers and maintenance of the Central Index	2,779	2.779	2,740
Insurance	Actuarial services	449	407	427
		119,406	112,077	88,975

* The 1985-86 HWC forecast is the aggregate of the Income Security Program (39,015) and the Departmental Administration Program (1,524).

** Net figure after deducting prior years' adjustments of $6,450K.

Extract from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $61,779,000 in support of the 1985-86 Fitness and Amateur Sport Program. The remaining expenditures, estimated at $657,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Section 1
Program Overview

A. Plans for 1985-86

1. Highlights

The Fitness and Amateur Sport Program will spend 83% of its 1985-86 budget on contributions to national sport organizations, to nationally ranked athletes and to national associations concerned with fitness and physical recreation.

Fitness: A sum of $8.3 million is designated for funding contributions for projects aimed at raising the fitness level of Canadians. Fitness Canada's contributions program and consultation will focus on the following areas during 1985-86:

- projects aimed at increasing youth fitness and sport participation. This priority will be especially emphasized during International Youth Year 1985 (see page 7-16);
- projects to encourage programming agencies to provide fitness and activity programs for older adults (pre-retirees and senior citizens) (see page 7-22);
- projects to promote and encourage the provision of fitness program opportunities at the work place, particularly in industrial settings (see page 7-16);
- projects which will increase physical activity opportunities for disabled and economically disadvantaged populations (see page 7-22);
- National Physical Activity Week (see page 7-17); and
- PARTICIPaction (see page 7-19).

Amateur Sport: A sum of $44 million is designated for funding contributions to assist and direct, through national sport organizations, the development of Canadian sport at the national and international levels and to support the highest level of achievement possible in international competitive sport. Sport Canada's contributions program and consultation will focus on the following areas in 1985-86:

- appraisal of Canada's performance at the 1984 Olympic Summer Games in Los Angeles (August 1984) and the re-setting of specific priorities for the four years leading up to the 1988 Summer Olympic Games in Seoul, Korea (see page 7-31);

- support to develop, in conjunction with national sport organizations, four year plans for the summer Olympic sports leading up to the 1988 Summer Olympic Games (see page 7-31);

- support for the initiation of the Association Management Services within Sport Canada (see page 7-16);

- support for the implementation and monitoring of a drug testing and research program initiated by Sport Canada in conjunction with national sport organizations and the Sport Medicine Council of Canada (see page 7-17);

- support to proceed with the monitoring of the five year "Best Ever" plans within each national winter Olympic sport organization (see page 7-31);

- support to enable the implementation of Year Three of the "Best Ever" five year plans for Winter Olympic sports (see page 7-31);

- development of a long range plan for the application of sport science to high performance sport in Canada (see page 7-31); and

- clarification of the role of Sport Canada in domestic sport at the competitive and "sport for all" levels and development of programs in this area (see page 7-15).

2. Financial Summary by Activity

The Program Administration Activity includes all operating costs relating to promotion and communications, field sports demonstrations, as well as administrative and financial support services.

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Fitness	10,517	9,739	778	7 - 23
Amateur Sport	47,262	53,736	(6,474)	7 - 28
Program Administration	4,657	41,526	(36,869)	7 - 32
	62,436	105,001	(42,565)	
Authorized person-years	131	133	(2)	-

The 1984-85 forecast figures are higher than the 1985-86 Estimates because of non-recurring items included in 1984-85 Supplementary Estimates B.

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 were:

Fitness

- A contribution of $795,000 enabled PARTICIPaction to obtain free public service advertising valued at over $14,000,000 from print and electronic media.

- With a contribution from Fitness Canada, the Canadian Public Health Association completed and published a comprehensive report on employee fitness in an industrial setting based on findings of a major demonstration project conducted during the two previous years in three locations across Canada.

- A Secretariat for Fitness in The Third Age was successfully established within the Canadian Parks/Recreation Association. The Secretariat's main tasks were implementation of the recommendations from the 1982 National Conference on Fitness and The Third Age, and provision of technical assistance, resource materials, and program expertise to groups wishing to establish fitness and activity programs for older Canadians.

- An important new film designed to promote activity among sedentary inactive members of the public and entitled "Fitness on Trial" was co-produced by T.V. Ontario and Fitness Canada and distributed through National Film Board Offices across Canada.

- Over 800,000 Fitness Canada publications were distributed free of charge in response to requests from individual Canadians during 1983-84. New publication initiatives included distribution of guides to adaptation of the Canada Fitness Award for both trainable mentally handicapped and physically disabled populations.

- In May 1983 over 6,000,000 Canadians in over 600 different communities took part in the first National Physical Activity Week co-ordinated by Fitness Canada. Fourteen national associations, provincial and territorial governments, and some 200,000 volunteers combined their efforts to ensure the success of this major promotional venture.

- Consultations were held with major national youth serving agencies and with youth fitness "experts" to identify issues and themes for a youth fitness emphasis in 1985, International Youth Year. A major report of the Canada Fitness Survey entitled Canadian Youth and Physical Activity was published in 1983 and will function as a basis for planning by education departments, all levels of government and the voluntary sector.

Amateur Sport

- The Canadian Team, participating with a large contingent of 218 individuals (112 men and 106 women), finished in third place at the World University Games held in Edmonton in July, 1983. This was the best performance ever of a Canadian Team in the FISU Games. The projection was for 13-15th place.

- The Canadian Team finished in third place (as projected) in the Pan American Games in Caracas, Venezuela, in August 1983. Canada traditionally finishes behind the USA and Cuba.

- The Canadian Team finished in eleventh place at the Winter Olympic Games in Sarajevo, Yugoslavia in February 1984. This result was in keeping with the projected target of tenth-twelfth place and was made notable by several outstanding performances by Canadian athletes such as Gaetan Boucher in speed skating and Brian Orser in figure skating.

- There were several outstanding performances by Canadian athletes outside of major Games competitions. These included the gold medal performances of Canadians Paul Martini and Barbara Underhill in the World Figure Skating Championships in Ottawa and the silver medal finish of the Canadian women's field hockey team at the World Cup in Malaysia.

2. Review of the Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Program Administration	16,249	5,264	10,985
Amateur Sport	44,696	40,457	4,239
Fitness	8,422	9,227	(805)
	69,367	54,948	14,419

The difference between actual expenditures and the Main Estimates results mainly from the following major items approved by Supplementary Estimates:

	($ millions)
Items where expenditures exceeded Main Estimates	
• Payment to the Canadian Sports Pool Corporation	10.5
• Funding for the development of a Best Ever team in the 1988 Winter Olympic Games, net of expenditures of $1.7 million which were initially approved in 1983-84 but were subsequently deferred	2.9
• Contributions to support the operating costs of the 1983 World Universiade (FISU) Games in Edmonton, Alberta	2.1
• Contributions to sponsoring organizations for Employment Initiatives projects	.8
• Contribution for the development of a Best Ever Hockey team in the 1984 Winter Olympic Games in Sarajevo, Yugoslavia	.4
Less: items where expenditures were less than approved in Main Estimates	
• Deferral of expenditures for preparation for the 1987 Canada Winter Games	(1.2)
• Temporary reduction of Sport Canada and Fitness Canada contributions in order to create a reserve in the Social Affairs envelope	(1.1)
Net difference	14.4

C. Background

1. Introduction

The Fitness and Amateur Sport Program is a component of the Department of National Health and Welfare. It represents the principal instrument by which the federal government discharges its commitment to contribute to increasing the fitness of Canadians while at the same time developing Canadian sport at the national and international level and supporting the highest level of achievement possible by Canada in international sport.

2. Legal Mandate

The passing of the Fitness and Amateur Sport Act in 1961 formally established the role of the federal government in encouraging, promoting and developing fitness and amateur sport in Canada. Although the federal government does operate several programs directly (e.g. Athlete Assistance Program, National Physical Activity Week), it mainly exerts its influence through the allocation of funds to organizations for specific activities and programs in support of its objectives.

3. Program Objective

The FAS Program Objective is to foster extensive participation in sport and physical activity within the nation, thus contributing to the fitness and sense of well-being of Canadians and to support the highest level of achievement possible by Canada in international competitive sport.

In order to meet this objective, the Fitness and Amateur Sport Program endeavours to attain the highest possible level of success by Canadians in competitive sport and to foster extensive participation in sport and physical activity within the nation. The Program thereby contributes to the involvement, fitness, and sense of well-being of Canadians, as well as enhancing their national pride.

The program focuses on the following areas:

Leadership: to provide leadership in setting national goals for the development, conduct and evaluation of sport and physical activity in Canada.

Infrastructure: to ensure the development and operation of a sound infrastructure at the national level, for the coordination and delivery of services and programs related to sport and physical activity.

Participation: to stimulate increases in the number of participants in sport and physical activity and to enhance the quality of that participation.

Excellence: to coordinate, promote and develop Canada's international stature in high performance sport in conjunction with recognized national sport organizations.

Promotion: to create a greater awareness among Canadians of the various intrinsic values and benefits of sport and physical activity.

Volunteers: to foster an environment within Canada that is conducive to the meaningful participation of qualified volunteers and the private sector in support of national sport and physical activity organizations.

4. Program Organization for Delivery

Activity Structure: The Fitness and Amateur Sport Program is made up of three activities as shown in Figure 2 (see page 7-10).

Figure 3: Program Activity Structure

Organization Structure: The Fitness and Amateur Sport Program is organized into four Directorates in Ottawa: Fitness Canada; Sport Canada; Promotion and Communications; and Financial Planning, Management and Services. In addition, there are four small regional offices in Halifax, Montreal, Winnipeg and Vancouver. These offices are primarily concerned with the provision of information and assistance to the public and to national events (i.e., Canada Games) in the region which they serve.

Figure 4: 1985-86 Resources By Organization/Activity ($000)

	Sport Canada	Fitness Canada	Promotion and Communications	Financial Planning, Management and Services*	Total
Sport	47,262				47,262

Program Administration			1,164	3,493	4,657
Total	47,262	10,517	1,164	3,493	62,436
Person-Years	35	27	10	59	131

* Also includes the staff of the Office of the Minister of State (Fitness and Amateur Sport), the Office of the Assistant Deputy Minister, the National Advisory Council and regional offices.

2089

D. Planning Perspective

1. Environment

Several key factors influence the direction of the Fitness and Amateur Sport Program.

International Factors: The United Nations has designated 1985 as International Youth Year (IYY) to focus attention on the problems and challenges facing youth. Fitness Canada will undertake initiatives to foster significant IYY participation with appropriate national voluntary organizations involved in the areas of physical recreation and fitness.

The 1983 incident involving drug abuse in sport at the Pan American Games has given Canada an opportunity to demonstrate its leadership in the curtailment of drug use. During 1984, Sport Canada, in conjunction with the national sport organizations and the Sport Medicine Council of Canada implemented a doping control testing program with the majority of Summer Olympic sports. The doping control testing program will be continued for the next four years with monitoring and assessment throughout.

As the number of countries participating in international sport throughout the world continues to increase, international sporting events are receiving more attention from governments as instruments of foreign policy. Opportunities therefore exist, not only to raise the profile of Canada as a nation, but also to increase international prestige through the performances of Canadian athletes. Canadian sport expertise can also be used by the federal government to improve relations with developing countries through provision of technical assistance to their sport programs.

Domestic Factors: Canadian universities, through the Canadian Intercollegiate Athletic Union (CIAU) have taken a decision to become more involved with national sport organizations and Sport Canada in developing high performance sport in Canada. Collaboration is continuing for the purpose of creating innovative programs among the three agencies with the end result of integrating Canadian Universities more effectively with organizations whose objective is the pursuit of sport excellence in Canada.

Through the efforts of the federal government, post-secondary institutions and other sport organizations, sport management and coaching are now recognized as viable professions in Canada. The creation of additional opportunities in these two fields is essential to further the progress of Canadian athletes and the Canadian sport infrastructure.

The fitness boom has meant more Canadians are participating in sport and recreation although participation levels decrease among older Canadians. Another major concern is that the fitness levels of youth drop off dramatically during adolescence.

While activity by national voluntary organizations in support of Fitness Canada's objectives continues unabated and a growing number of requests for contributions is being received by Fitness Canada, at the same time there is increasing evidence of interest within the corporate sector in collaborating to promote fitness.

Economic Factors: In addition to federal government funding, sport in Canada has depended on significant contributions from the private sector, either in the form of corporate donations to national sport organizations or events sponsorships, undertaken by corporations using sport as a medium for the corporate message. Attention must be paid to maintaining the integrity of sport while at the same time accepting the benefits of corporate sponsorship.

During a period of fiscal restraint and restricted financial incentives to employees, factors such as absenteeism, turnover, employee health and morale become more important to employers. Several well-documented studies have demonstrated the economic benefits available from fitness and lifestyle education programs in the workplace.

Intensive analysis of the 1981 Canada Fitness Survey Data has enabled national associations, provincial and territorial governments and Fitness Canada itself to identify priority target groups in an increasingly effective manner. This has enabled more effective national co-ordination and allocation of scarce resources for optimum impact in the field.

Social Factors: More Canadians of all ages are participating in competitive and recreational sport. Fitness and Amateur Sport has responded to this demand by providing leadership in the "Sport for All" concept and fitness projects. The Canada Fitness Survey (1981) indicates that there is a strong link between physical activity and health. More Canadians who describe themselves as "inactive" are smokers. They also show a higher level of cardiovascular disease risk. Canadians who call themselves "active" have been found to exhibit higher levels of positive emotional well-being and are more likely to demonstrate good nutritional habits. Studies conducted by Fitness Canada and by several of its client associations in the voluntary sector have demonstrated that individuals who have acceptable levels of fitness are better able to cope with stress.

Concern has been expressed about the overall well-being of Canada's elite athletes during and after the period of their intense training and competition. Sport Canada intends to address this issue through job training programs for retired athletes, extended athlete assistance and other forms of athlete services.

2. Initiatives

Major initiatives being introduced in 1985-86 include the following:

Fitness

Youth Sport and Fitness: In response to the opportunity provided by International Youth Year 1985, Fitness Canada will convene a major national Symposium on Youth Fitness and Sport Participation. Delegates from across Canada including young people themselves and representatives of programming agencies and various levels of government will consider the findings of research currently being conducted by Fitness Canada. These will include a study of the components of successful youth fitness programs and the result of a major marketing survey on techniques for marketing sport and fitness to youth in the 1980s.

Corporate Sector Collaboration: As a result of interest expressed by several major corporations, Fitness Canada will provide technical input and direction to a number of important national promotional initiatives in close collaboration with corporations who wish to identify themselves and their products with the fitness movement in 1985-86. It is anticipated that these activities will complement the more traditional activities undertaken in conjunction with provincial governments and national voluntary organizations.

Fitness in the work place: Fitness Canada will develop in 1985 an administrative structure designed to facilitate co-operation with industry in order to permit the development of fitness programs specially designed for implementation in the work place.

Amateur Sport

Quadrennial Planning: In 1985-86, Sport Canada will continue to provide leadership to national sport organizations of Summer Olympic Sports through a project designed to assist them with the preparation of quadrennial plans. The purpose of this project is to increase the quality of the performance of Canadian athletes in Olympic summer sports in order to attain the highest possible ranking by Canada in the 1988 Olympic Games.

"Best Ever" Program: The "Best Ever" program is designed to produce the "Best Ever" Canadian Team in the 1988 Winter Olympic Games in Calgary. Based on comprehensive 5 year plans for each winter sport developed under the leadership of Sport Canada, there has been an additional commitment of $25 million for programs and National Sport Organizations over the five year period leading up to 1988 Winter Olympics.

Association Management Services: National sport organizations have traditionally experienced a number of organizational problems which have had a detrimental effect on their ability to provide programs required to enhance national sport development and international competitive

performance. The purpose of the Association Management Services Program of Sport Canada is to provide leadership and resources to national sport organizations in order to enhance their management capacity and administrative effectiveness.

Drug Testing and Research: The problem of drug use by international calibre athletes has reached significant proportions as evidenced by the number of athletes disqualified from the 1983 Pan American Games and the 1984 Olympic Games. Sport Canada, in conjunction with national sport organizations and the Sport Medicine Council of Canada, will support measures required to control the use of banned substances in Canada and the sport world generally.

Athlete Assistance: In late 1984, a new category of funding called "Development Cards" was initiated for promising athletes who are part of the national training squad but not yet ready for membership on the national team in selected sports. These cards are intended to provide support to enable young athletes who have not reached C card status to train in advanced programs under the aegis of the national sport body. These cards will generally be allocated to sports where the technical complexity or training cycle of the sport is such that athletes must follow sophisticated programs for many years before attaining international standards. This concept will be more fully developed in 1985-86.

3. Update of Previously Reported Initiatives

National Physical Activity Week: The major new initiative undertaken by Fitness Canada in 1983-84 was the first National Physical Activity Week. This program was a major success in that all participation targets were exceeded and a basis for continuing collaborative programming was established among national associations, provincial and municipal governments and Fitness Canada. Expenditures on this project in 1983-84 included total contributions of $192,560 to complete the 1983 campaign. A further $553,900 was provided to fund preparations of the 1984 campaign. These amounts, which were re-allocated from within Fitness Canada's existing resource base, were higher than anticipated largely as a result of the extremely positive involvement by National Voluntary Organizations and public response to the campaign. National Physical Activity Week 1984 continued this successful pattern with close to 10,000,000 participants taking part in over 8,400 community events. Major national associations, provincial governments, municipal recreation departments and school jurisdictions all collaborated to make this one of the most successful mass participation events in the history of Canada. It is anticipated that National Physical Activity Week will continue as a major annual event involving all levels of government, the voluntary sector and, increasingly, the corporate sector.

National Team Augmentation: Canadian athletes performed as projected in international competitions in 1983-84 (see page 7-39). These results indicate that there are many positive programs at work as part of the

high performance system in Canada. These performance results can be improved, however, and Sport Canada is now working with national sport organizations to develop a strategy for higher achievement in the 1988 Olympic Games.

4. Program Effectiveness

Fitness: It is the stated goal of the Fitness Activity to encourage physical activity that leads towards fitness.

More than 80% of Fitness Canada's expenditures are channelled through national voluntary associations. This is an effective strategy as was demonstrated, for example, in each of the last two National Physical Activity Weeks when more than 200,000 volunteers were mobilized across Canada to organize and stage special events to mark the week.

Increased activity in the voluntary sector in support of Fitness objectives is demonstrated by the figures in the following table:

Figure 5: Number of Contribution Requests Submitted to Fitness Canada by National Associations

This increased level of activity in the voluntary sector in support of fitness is complemented by increased interest on the part of the corporate sector. Major national corporations have collaborated in the past with PARTICIPaction and are now beginning to express interest in projects to be undertaken directly in conjunction with Fitness Canada.

A key indicator of the effectiveness of Fitness Canada's programs is the number of Canadians who report regular (three times weekly) participation in physical activity. This figure has increased substantially from less than 10% in 1971 to over 38% in 1981.

Figure 6: Percentage of Canadians Participating in Regular Physical Activity

Figure 7: Increased Participation in Physical Activities by Age Group

Between 1976 and 1981 participation has increased in every age group.

Note: It is anticipated that the latter two program effectiveness indicators, when updated, will continue to show a trend towards increased activity by Canadians. The most recent collection of data to illustrate this was the Canada Fitness Survey in 1981. The feasibility of conducting some form of repeat survey in 1986 is currently being examined. Should the outcome of this review prove to be positive a significant updating of these and other indicators will be possible.

Amateur Sport: More than 80% of the Amateur Sport Activity expenditures are directed towards the promotion and development of amateur sport in Canada and the support of high performance achievements by Canadians in international competition. A measure of the success of this endeavour is Canada's international sport ranking, as indicated by standings in the major multi-sport games (Olympics, Pan-American, Commonwealth, etc.). These rankings are difficult to predict as they are influenced by factors other than the Program's contributions. The Amateur Sport Activity supports national full-time coaches (25-30 in 1984-85); training centres which bring together top athletes, coaches, facilities, and medical/scientific services provided by host institutions (in 1984-85, there are national or regional training facilities in at least 18 sports); national team training and competitive programs; along with direct financial assistance to athletes to enable them to participate in their national programs. Figure 25 (see page 7-39) shows anticipated rankings based on levels of contributions for 1985-86.

Through the Athlete Assistance Program, Canadian athletes ranked 1 to 16 in the world and those who have been identified as having potential to advance to the top 16 receive direct financial assistance from Sport Canada.

Approximately 25% of the athletes at the C level supported by the Athlete Assistance Program advance to the A or B level. If Canada is to improve its world ranking (as indicated by A or B ranked athletes), assistance must be continued to C card athletes who will ultimately advance to A or B levels. The probability of advancing to higher levels is influenced by the size of the Athlete Assistance Program stipend (which defrays training and living costs), and by the national team program support (for coaches, training camps, competitions, sport science services, etc.) provided to national sport organizations.

The number of Canadian athletes ranked 1 to 8 in the world has increased from 116 in 1983-84 to 125 in 1984-85 as illustrated in Figure 8 (see page 7-21). It is anticipated that this number will increase by approximately the same amount in 1985-86. There has been a significant increase in the number of B-cards in 1984-85.

Figure 8: Number of Athletes Assisted

Year	Total Athletes Assisted	A	B	C	Development
1982-83	797*	101	124	572	
1983-84	732	116	96	520	
1984-85	780	125	130	525	100

A Cards: Athletes are ranked 1 to 8 in the world (individual sports); or 1-4 (team sports).

B Cards: Athletes are ranked 9 to 16 in the world (individual sports); or 5-8 (team sports).

C Cards: Athletes are not yet ranked in the top 16 but have been identified as having potential to advance to top 16.

Development Cards: Promising athletes not yet at C card status, training in programs at the national level (see page 7-17).

* Includes 124 athletes funded by a special "Atlantic Block" (not included in 1983-84 and following years.)

Section II
Analysis by Activity

A. Fitness

Objective

To raise the fitness level of Canadians through increased participation in physical activity thereby contributing to health, well-being and the capacity to perform daily activities.

Within this objective, specific targets for 1985-86 include:

- to increase the motivation of Canadians to engage in physical activity:
  - through National Physical Activity Week (May 26 - June 3, 1985), to sensitize 15 million Canadians to the benefits of physical activity and to achieve the active participation of 12 million Canadians;
  - by assisting PARTICIPaction to obtain free publicity coverage by 150 television and cable stations, 300 radio stations, 700 weekly newspapers and 250 special interest publications; and
  - by developing and promoting fitness resources aimed at specific target groups, for example, adolescent youth, older Canadians, etc.
- to increase the availability and accessibility of programs that facilitate participation in physical activity:
  - by disseminating to programming agencies quality resource materials on successful programs for specific target groups e.g., adolescent youth, senior citizens;
  - by establishing mechanisms to introduce employers to the benefits of employee fitness programs and by providing information and technical consultation to assist them in initiating programs;
  - by establishing and promoting appropriate standards for program leaders in conjunction with provincial government departments and national associations; and
  - by revising the content of the Canada Fitness Award Program for adolescent youth.

- to improve the environment, organization infrastructure and program delivery systems for physical activity in Canada:

  - by publishing and disseminating research findings on appropriate programming for adolescent youth;

  - by continuing to develop training modules for volunteer administrators in fitness, physical activity and sport organizations;

  - by continuing to promote the implementation of program models to encourage "Sport for All"; and

  - through the development and adoption of formal program agreements with provincial governments, thus reducing overlap and duplication of services.

Resource Summary

The Fitness Activity represents 17% of the Fitness and Amateur Sport budget for 1985-86.

Figure 9: Activity Expenditures $000 and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Fitness	10,517	27	9,739	27	8,422	24

Past Financial Performance

Actual expenditures were 9% lower than the amounts approved in Main Estimates, due primarily to specific budget cuts which were absorbed during the year.

Figure 10: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Fitness	8,422	9,227	(805)

Explanation of Change:

- The decrease results primarily from a temporary reduction of contributions for fitness projects in order to create a reserve in the Social Affairs envelope.

Description

Fitness Canada's efforts are directed towards focusing the attention and activities of the fitness field on issues of national relevance. It identifies areas of need, develops program materials and services and innovative program models, both directly and indirectly, and promotes their acceptance and implementation. It supports selective research, information collection and dissemination, and the development of national standards for fitness programs directly, or by providing contributions and working closely with organizations carrying out that work.

Financial and technical support is also provided to national voluntary organizations for fitness promotion, leadership development, demonstration programs, the delivery of fitness programs and organization management. Fitness Canada actively consults and liaises with all provincial governments, organizations and agencies involved in fitness.

Funding Process: Fitness Canada issues call letters for contribution requests to national voluntary associations and other agencies, and assesses their requests according to established criteria and stated priorities. Priorities emphasize the development of certain age groups, population segments or program areas based on the results of studies and surveys such as the Canada Fitness Survey. On the basis of Fitness Canada's assessment of the applications, final funding recommendations are made to the Minister.

Performance Information/Resource Justification

Canada Fitness Award Program: The Canada Fitness Award program has tested the speed, power, strength, agility and endurance of some 17 million boys and girls age 6-17 since its inception in 1970. In 1983-84, approximately 1,021,000 children out of a possible 4,900,000 across Canada participated in the Canada Fitness Award program. Participation is expected to increase to 1,100,000 in 1984-85 and 1,200,000 in 1985-86.

Figure 11: Canada Fitness Awards

Sport Action Unit: The Sport Action Unit consists of two mobile exhibition units which are used to promote sport and physical fitness activities.

The units are set up at exhibitions, fairs, schools and community centers, and members of the local community are invited to participate in the sports activities. The display consists of numerous participation activities in which young and old are encouraged to try their skills at sports such as tennis, baseball, football, and numerous physical fitness tests. Attendance usually totals over half a million persons each year.

The cost of operating this program, in terms of the cost per visitor to the Sport Action Unit is approximately $0.90.

Figure 12: Sport Action

National Physical Activity Week (NPAW): As previously reported, Fitness Canada achieved a participation level of 6 million people in NPAW 1983, and 10 million in NPAW 1984. The projection for 1985-86 is 12 million participants.

With constant resource levels, the following table illustrates participation trends in NPAW.

Figure 13: Participation Trends in NPAW

Figure 14: Breakdown of Fitness Contributions (1985-86)

Purpose	Amount $
• to assist in the development of uniform standards of programs and leadership	833,900
• to improve the volunteer delivery system at the national level	3,335,600
• to promote and inform Canadians about physical activity	1,334,240
• to conduct surveys and research and disseminate the results	1,250,850
• to encourage innovation through pilot or demonstration projects	1,167,460
• to enhance the advocacy role of national associations in encouraging changes to Canadian lifestyle.	416,950
	8,339,000

B. Amateur Sport

Objective

To develop Canadian sport at the national and international level and to support the highest possible level of achievement by Canada in international sport.

Specific goals relating to this activity are as follows:

- To coordinate, promote and develop high performance sport in Canada in conjunction with recognized national sport organizations.
- To assist in the development of domestic sport in Canada in those areas which require coordination at the national level.
- To provide administrative and technical leadership, policy direction, consultative services, and financial resources to assist national sport organizations to function effectively as the primary agents for excellence and co-ordinated sport development in Canada.
- To develop federal government sport policies.

A specific target for 1985-86 is to prepare the Canadian Team for the Summer FISU Games to be held in Kobe, Japan.

Resource Summary

The Amateur Sport activity represents 76% of the Fitness and Amateur Sport budget for 1985-86.

Figure 15: Activity Expenditures $000 and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Amateur Sport	47,262	35	53,736	37	44,696	33

Past Financial Performance

Actual financial requirements were 11% higher than originally anticipated.

Figure 16: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Amateur Sport	44,696	40,457	4,239

Explanation of Change: The following major program expenditures were approved in Supplementary Estimates:

	($ millions)
Items where expenditures exceeded Main Estimates	
• Funding for the development of a Best Ever team in the 1988 Winter Olympic Games, net of expenditures of $1.7 million which were initially approved in 1983-84 but were subsequently deferred	2.9
• Contributions to support the operating costs of the 1983 World Universiade (FISU) Games in Edmonton, Alberta	2.1
• Contribution for the development of a Best Ever Hockey team in the 1984 Winter Olympic Games in Sarajevo, Yugoslavia	.4
Less: item where expenditures were less than approved in Main Estimates	
• Deferral of expenditures for preparation for the Canada Winter Games	(1.2)
Net difference	4.2

Description

The Amateur Sport Activity concentrates on the following program components:

2105

High Performance Sport/Sport Excellence: This component encompasses those endeavours that have as their objective the attainment of the highest possible level of achievement by Canadian athletes in international sport with particular emphasis on the Olympic Games sports. Sport Canada administers technical programs such as the Athlete Assistance Program, the Sport Science Support Program, the Applied Sport Research Program and the Hosting Program and provides technical consultation and financial resources to national sport organizations in such areas as national team programs, national and international competitions, coaching, sport sciences and high performance sport centres.

In 1985-86, Canada will participate in the following major international Games:

- World University Games (Summer Sports), Japan, 1985

Domestic Sport Development: This component provides funding and policy direction for the development of technical and competitive programs serving participants below the international high performance level. Major activities of this component include national developmental events such as the Canada Games and respective sport national championships, the developmental programs of the Coaching Association of Canada and the technical education programs of national sport organizations.

Sport Infrastructure: The activities of this component provide funding and policy direction for the development and maintenance of an effective sport delivery system at the national level. Included in this component are the National Sport and Recreation Centre and those aspects of national sport organizations involving their administrative staff, offices, meetings, planning, etc.

Planning and Assessment: This component focuses on planning and assessing Sport Canada's programs and the progress of Canadian amateur sport in general. Its responsibilities also include the development and organization of Sport Canada's planning process in a manner compatible with both the needs of the Fitness and Amateur Sport Program and the requirements of the Department and central agencies.

Funding Process

Funding decisions insofar as national associations are concerned are the result of a review procedure reflecting Sport Canada's program priorities. Applications for funds from national sport organizations are reviewed in light of the priorities of Sport Canada, the plans and accomplishments of the national sport organizations and the comprehensiveness of the submission. On the basis of this examination, final funding recommendations are made to the Minister.

Performance Information/Resource Justification

The performance of the Amateur Sport Activity may be assessed through such indicators as the performance of Canadian athletes in major multi-sport Games and World Championships, the number of athletes eligible to receive funding through the Athlete Assistance Program, the number of High Performance Sport Centres established, and the number of professional coaches employed in amateur sport.

In major multi-sport games in 1984, Canada, as a nation, placed fourth in the Summer Olympic Games in Los Angeles. Although this ranking was undoubtedly assisted by the absence of several nations, the Canadian performance was the highest ranking ever achieved. If projected results from boycotting nations are factored into the L.A. results, Canada still finishes with a "best ever" ranking.

In 1983-84, $25 million were allocated to Fitness and Amateur Sport over a five-year period to assist with the preparation of the Canadian Team for the 1988 Winter Olympics. Sport Canada has designed a process to work with national sport organizations to plan and implement technical programs which will produce the "Best Ever" team in 1988. In 1983-84, Sport Canada worked with the 10 winter Olympic sport organizations to develop their planning and monitoring systems. In 1984-85, work continued on the implementation and monitoring of these plans.

In 1983-84, a federal government program on High Performance Sport Centres was initiated. In 1984-85, several High Performance Sport Centres in specific sports were put in place across the country. In 1985-86 at least 15 sports will develop long-range plans for the incorporation of centres into their high performance activities.

In 1985-86, contributions will be provided to national sport organizations for the following purposes:

Figure 17: Breakdown of Amateur Sport Contributions (1985-86)

Purpose	Amount $
1. High Performance Sport (including national team programs, athlete assistance, Major Games Teams, medical services, event hosting, coaching, technical programs, administrative support).	23,766,480
2. Domestic Sport System (including Coaching Association, technical programs, national championships, Canada Games).	10,562,880
3. Sport Infrastructure (including the National Sport and Recreation Centre professional staff salaries and administrative support to National Sport Organizations).	9,682,640
	44,012,000

C. Program Administration

Objective

To provide overall direction to and coordination of program activities by providing policy advice and direction; planning, financial and administrative services; promotion and communications support services.

Resource Summary

Figure 18: Activity Expenditures $000 and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Promotion and Communications	1,164	10	1,253	10	963	11
Financial Planning, Management and Services*	3,493	59	3,773	59	4,786**	60
Payment to the Canadian Sports Pool Corporation	-	-	36,500	-	10,500	-
	4,657	69	41,526	69	16,249	71

* Also includes the staff for the office of the Minister of State (Fitness and Amateur Sport), the office of the Assistant Deputy Minister, and regional offices.

** In 1983-84, all operating costs, including salary and wages and person-years were allocated solely to the Administration activity. Subsequent to that date, operating costs have been allocated directly to the three individual activities. For comparative purposes, prior years figures by activity have been restated and differ from those reported in Public Accounts.

Past Financial Performance

Actual financial requirements were 309% higher than originally anticipated.

Figure 19: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Program Administration	16,249	5,264	10,985

Explanation of Change: The following major program expenditures were approved in Supplementary Estimates:

- Payment to the Canadian Sports Pool Corporation (10.5 million)
- Contributions to sponsoring organizations for Employment Initiatives Projects (0.8 million)
- Other adjustments, net (0.3 million)

Description/Resource Justification

The Program Administration Activity provides financial and administrative support services as well as promotion and communication support services to the Fitness and Amateur Sport Program; in addition, it includes the other branch-wide services of the program (i.e., office of the Minister of State for Fitness and Amateur Sport, office of the Assistant Deputy Minister and regional offices).

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 22: Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contribution*			
Fitness			
Contributions towards costs of projects aimed at raising the fitness level of Canadians and contributions towards the administrative and project costs of national recreation associations and agencies to assist in the promotion and development of physical recreation for Canadians.	7,478	6,753	6,353
Contribution to the operating expenses of PARTICIPaction's campaign to make Canadians aware of the benefits of physical recreation and to encourage greater fitness amongst all segments of the population.	861	835	795
Amateur Sport			
Contributions towards the administrative and project costs of amateur sport organizations to assist in the promotion and development of amateur sport for Canadians.	31,373	33,720	29,449
Contribution to the National Sport and Recreation Centre Inc. towards the costs of services provided to resident and non-resident organizations.	4,441	4,390	4,125

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions towards the academic, living and training expenses of outstanding amateur athletes.	3,994	4,335	3,662
Payment, in accordance with agreements, to the sponsoring organizations of multi-sport regional, national and international games towards the capital and operational expenses of games held in Canada and for the operational expenses of single sport international championships held in Canada.	4,204	8,122	5,241
Contribution towards the upgrading of the Speed Skating Oval in Ste Foy, P.Q.	-	1,125	-
Student summer and youth employment.	-	-	8
New Employment Expansion and Development (NEED) Program.	-	-	65
Program Administration			
Payments in accordance with agreements with sponsoring organizations for employment initiatives projects.	-	425	803
	52,351	59,705	50,501

* A detailed listing of the associations that receive contribution funding from the Fitness and Amateur Sport Program is available in the annual report published for the Program.

B. Cost Analysis

Program Costs by Activity: The overall cost of the Fitness and Amateur Sport Program includes the operating costs and contributions along with the value of services provided free by other departments. These additional services include the value of accommodation provided by the Department of Public Works ($616,000) and financial services by the Department of Supply and Services ($146,000) and other services provided by the Treasury Board ($89,000) and Labour Canada ($5,000). The program does not generate revenue, however, we do account for collections under the Inter- Provincial lottery agreement (approximately $35 million per annum).

Figure 24: Net Program Costs ($000)

	1985-86 Operating Expenditures	1985-86 Transfer payments	Add Other Costs	Total Cost	Total Cost 1984-85
Fitness	2,178	8,339	-	10,517	9,739
Amateur Sport	3,250	44,012	-	47,262	53,736
Program Administration	4,657	-	856	5,513	41,526
	10,085	52,351	856	63,292	105,001

C. Additional Information

1. Canada's International Sport Ranking

Figure 25: Canada's International Sport Ranking

	Common-wealth Games	Pan American Games	Winter Olympic Games	Summer Olympic Games	World Universiades
1978-79	1st Edmonton, Canada (projected 1st)				
1979-80		3rd San Juan, Puerto Rico	13th Lake Placid, U.S.A.		14th Mexico City Mexico
1980-81				* Moscow, USSR	
1981-82					12th Bucharest, Romania
1982-83	3rd Brisbane, Australia (projected 1st-3rd)				
1983-84		3rd Caracas, Venezuela	11th Sarajevo, Yugoslavia (projected 10th-12th)		3rd Edmonton (projected 13th-15th)
1984-85				4th Los Angeles, U.S.A. (projected 10th-12th)	Italy (no projection as a nation)
1985-86					(Projected 8th) Kobe, Japan

* Canada did not participate due to the boycott of the 1980 Olympic Games. Therefore, no standing was achieved. Canada did rank 10th in the 1976 Olympic Games held in Montreal. The estimated standing of Canada in 1980, based upon a comparison of Canadian performances with those achieved in Moscow, is 15th.

Section 1
Program Overview

A. Highlights

The Government of Canada has established this Program to provide direct funding, to participate as an "active contributor", and to coordinate federal services in support of the XV Olympic Winter Games.

Selected initiatives of the Program for 1985-86 are as follows:

- The continued construction of Canada Olympic Park, venue for the ski-jump, bobsleigh and luge competitions of the XV Olympic Winter Games.
- The continued monitoring of the construction of the Olympic Speedskating Oval being funded by the Program and constructed by the University of Calgary as the venue for the speedskating competitions.
- The continued planning and coordination of essential and discretionary services to be provided by the Government of Canada.
- Conclusion of all remaining agreements with Games partners.

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

Activity	Estimates 1985-86	Forecast 1984-85	Change
XV Olympic Winter Games Program	49,891	45,908	3,983
Authorized person-years	13	13	-

The 1984-85 Main Estimates (see page 8-4) reflect no resources. This Program has been funded through Supplementary Estimates and this is reflected in 1984-85 Forecast.

The increase of $3,983,000 in the 1985-86 requirements over the 1984-85 forecast is made up of the following major items:

- the capital and contributions payments have been established by the terms and conditions of agreements with recipient organizations $3,480,000
- a net increase in salaries and wages, contributions to employee benefit plans and contributions due to inflation $ 610,000

C. Background

1. Introduction

The XV Olympic Winter Games will take place in February 1988. The Government of Canada has established this Program to provide direct funding, to participate as an "active contributor" in the Games, and to coordinate federal services in support of the Games. The Program will exist through fiscal year 1988-89 with direct funding expenditures from the Federal Government of $200 million (1982-83 dollars).

The Program will liaise with the provincial and municipal levels of government through participation in the Calgary Organizing Committee's Board of Directors and Executive Committee, and the Calgary Olympic Development Association's Board of Directors. In coordinating federal efforts, the Program will liaise with numerous federal departments concerning the provision of federal essential and discretionary services.

2. Legal Mandate

The legal mandate for the Program is based on the Fitness and Amateur Sports Act of 1961.

3. Program Objective

To support the successful planning and staging of the XV Olympic Winter Games so that they will be a matter of national pride, and to optimize economic, athletic and cultural benefits before, during and after the Games.

4. Program Description

The Program:

- provides direct funding towards operating, capital expenses and endowment funding to enable the Government of Canada to meet its objectives for participating in the planning and staging of the XV Olympic Winter Games;
- participates in the Calgary Organizing Committee's Board of Directors and Executive Committee, and the Calgary Olympic Development Association's Board of Directors;
- coordinates the provision of all federal services in support of the Games; and
- provides appropriate visibility to the Government of Canada in matters relating to the XV Olympic Winter Games before, during and after the Games.

5. Program Organization for Delivery

This temporary Program consists of a single Activity. It reports to the Minister of Fitness and Amateur Sport and to the Deputy Minister of the Department of National Health and Welfare.

D. Planning Perspective

1. Environment

In September 1981, the International Olympic Committee (IOC) selected Calgary to host the 1988 Olympic Winter Games. The Government of Canada was involved in this project from the outset by contributing towards the cost of the bid for the Games. In an effort to reinforce Calgary's position with the IOC, it also made a commitment to provide direct funding and to provide federal essential services.

From the beginning, the Government of Canada assumed a partnership role in this event. When the IOC awarded the bid to the City of Calgary, the governments of Canada, Alberta and the City of Calgary established special secretariats or liaison offices to coordinate their involvement in the Games. It was generally recognized, both in the structure and staffing of these offices, that, although the Olympics are a sporting event, the preparations for the Games focus on negotiations, financial management, facility construction, the planning of services and public affairs.

2. Initiatives

During 1985-86, the Program will undertake the following:

- The continued construction of Canada Olympic Park, venue for the ski-jump, bobsleigh and luge competitions of the XV Olympic Winter Games.
- The continued monitoring of the construction of the Olympic Speedskating Oval being funded by the Program and constructed by the University of Calgary as the venue for the speedskating competitions.
- The continued planning and coordination of essential and discretionary services to be provided by the Government of Canada.
- Conclusion of all remaining agreements with Games partners.

3. Program Effectiveness

Through the Office for the 1988 Olympic Winter Games, the Government of Canada negotiates the required agreements with other Olympic partners, coordinates legislative and regulatory changes, manages the federal direct funding contribution, directs design and construction of federal capital projects, coordinates the planning and delivery of federal service and logistic support to the Games, and coordinates federal public affairs, communications and promotion plans.

The effectiveness of this Program will be seen when the 1988 Olympic Winter Games are held in Calgary. No evaluation component is proposed as this is a sunset Program.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $39,979,000 for operating expenditures and grants and contributions to operate the Departmental Administration Program during the 1985-86 fiscal year. The amount is net of estimated expenditures of $1,524,000 for administrative services to be charged to the Canada Pension Plan. The remaining expenditures, estimated at $4,177,000, for contributions to employee benefit plans and the Minister's salary and motor car allowance will be made under existing statutory authority.

Section 1
Program Overview

A. Highlights

- Net Program expenditures are anticipated to be $44.2 million in 1985-86. This represents an increase of $.366 million or .8 percent over 1984-85 forecast expenditures.

- The authorized person-year level for 1985-86 is 847, down 34 from the forecast 1984-85 level of 881. This represents a decrease of 3.9 percent.

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Departmental Executive	5,300	5,528	(228)	9.12
Policy, Planning and Information	9,877	10,192	(315)	9.14
Intergovernmental and International Affairs	1,833	1,815	18	9.16
Corporate Management	28,[illegible]70	27,806	864	9.19
	[illegible]680	45,341	339	
Less: receipts and revenues credited to the Vote*	1,524	1,551	27	
	44,156	43,790	366	
Authorized person-years	847	881	(34)	

* Costs incurred for administrative services to the Canada Pension Plan (CPP) are recoverable from the Plan.

The increase of $366,000 in the 1985-86 requirements over the 1984-85 forecast is made up of the following major items:

	($000)
• discretionary expenditure reductions;	(1,147)
• for all activities, a net increase in salaries and wages, contributions to employee benefit plans and Canada Pension Plan recovery due to inflation	1,593

Figure 2: Gross Expenditures by Activity (percentage distribution 1985-86)

C. Background

1. Introduction

The Departmental Administration Program encompasses the areas of audit, evaluation, public affairs, financial management, personnel administration services, general administrative services and management information systems. It also provides direction, planning, coordination, policy development and information to the Department as a whole.

The Program coordinates, monitors and when required, initiates departmental policies and strategies on those international and federal/provincial/territorial health and welfare issues where they affect more than one departmental program or require interdepartmental consultation.

Important links are also maintained with central agencies to ensure compliance with government regulations, standards and strategies.

2. Legal Mandate

The legal mandate for the Departmental Administration program is based on the Department of National Health and Welfare Act.

3. Program Objective

The object of the Departmental Administration Program is to provide executive direction and management services.

4. Program Organization for Delivery

Activity Structure: The Program is comprised of four activities as described in Figure 3.

Figure 3: Activity Structure

The major portion of the operation of the Program is carried on at the Headquarters of the Department located in the National Capital Region. Some public affairs services and personnel services are provided in many regions across Canada.

Organization Structure: The Departmental Administration Program is under the general direction of the Deputy Minister and the Associate Deputy Minister. There are three Branches, headed by an Assistant Deputy Minister, as well as many directorates, secretariats or offices also reporting directly to the Deputy Minister or the Associate Deputy Minister.

The Program carries out a variety of corporate level functions and includes resources needed to accomplish this role. Personnel, Program Evaluation and Internal Audit are centralized under this Program. The Administrative Services and Public Affairs Directorates provide some direct services to the other programs as well as functional direction and advice. The areas of planning and finance provide corporate level direction, advice and coordination to other departmental programs. The Program Administration activities found in other programs of the Department provide specific services that are not supplied at the corporate level.

Figure 4: Resources by Organization/Activity ($000)

	Assistant Deputy Minister, Intergovernmental and International Affairs Branch	Assistant Deputy Minister, Policy, Planning and Information Branch	Assistant Deputy Minister, Corporate Management Branch	Departmental Executive Organizations *	Activity Total

Total (Net of CPP Recoveries)	1,833	9,629	27,554	5,140	44,156
Person-Years	22	136	599	90	847

*Departmental Executive organizations are comprised of Special Adviser, Policy Development; Program Evaluation; Principal Nursing Officer; the Secretariats for the National Council of Welfare and the National Advisory Council on Aging; Minister's Office, Deputy and Associate Deputy Minister's Office.

D. Planning Perspective

1. Environment

The Program plays a major role in ensuring that the Department's inputs to the policy-making process are based on rigorous research and analysis, that appropriate measures are taken in order to improve accountability and that effective and efficient management practices are established throughout the Department as well as to ensure that the department meets central agency requirements.

2. Initiatives

During 1985-86, the Departmental Administration Program will undertake the following:

- to prepare a comprehensive analysis of federal policies as they affect the social security of Canadian families;
- to provide an assessment of policy options with respect to contributions to the provinces for health care services;
- to complete the development of a new approach to the management of Electronic Information Systems (EIS) in the Department which is to include the establishment of an EIS directorate, a departmental process for Long Range Systems Planning and the utilization of advanced office automation technology;
- to implement a departmental management information system to assist in the effective decision-making process throughout the Department;
- to review and strengthen the financial administration function in the Department;
- to ensure that the action plan of the affirmative action program is carried out throughout the Department; and
- to initiate co-ordinative requirements in planning the Department's hosting of the 1986 General Assembly of the International Social Security Association to be held in Montreal in September 1986.

3. Program Effectiveness

The major portion of the Program's operations involves policy development and coordination, information, advisory services, planning and direction. These are supportive of other programs in the Department of National Health and Welfare and are regulated or required to a large extent by central agencies.

Section II
Analysis by Activity

A. Departmental Executive

Objective

To provide advice and direction in the development of policies and programs which will ensure the provision of an appropriate level of health and welfare services throughout the nation.

Resource Summary

The Departmental Executive Activity accounts in fiscal year 1985-86 for 11 percent of the total resources of the Departmental Administration Program and 10 percent of the total person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Departmental Executive	5,300	90	5,528	97	4,720	89
Less: receipts and revenues credited to the Vote*	160		105		105	
	5,140	90	5,423	97	4,615	89

* Costs incurred for administrative services to the Canada Pension Plan are recoverable from the Plan.

Description/Resource Justification

The Departmental Executive Activity is responsible for overall management of the Department and consists of the Departmental Executive (Offices of the Minister, Deputy Minister and the Associate Deputy Minister, the National Council of Welfare, the National Advisory Council on Aging, the Principal Nursing Officer), the Special Adviser and Program Evaluation.

This activity provides advice and direction on different health and social services matters.

Departmental Executive: Provides advice to the Minister, the Deputy Minister and the Associate Deputy Minister on matters related to health, welfare, nursing and the quality of life of older Canadians.

Special Adviser: Provides advice to the Deputy Minister and the Associate Deputy Minister on social policy issues, promotes the development of policies to safeguard the health and welfare of Canadian women and their families, and ensures that government policies are fully applied in the collection, use and disclosure of information under departmental control.

Program Evaluation: Is responsible for the review and assessment of all departmental programs to determine the adequacy of their objectives and designs, their continued relevance, the results which they have achieved, and alternative means of their delivery.

B. Policy, Planning and Information

Objective

To support the development of departmental policies and the management of its programs by initiating and undertaking policy research and analysis, by implementing and maintaining information systems and by contributing to the Department's planning processes.

Resource Summary

The Policy, Planning and Information Activity accounts for 22 percent of the total expenditures and 16 percent of the total person-years of the Departmental Administration Program in 1985-86.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Branch Management	1,522	25	1,458	25	1,448	24
Policy Resources	2,404	41	2,304	39	2,161	34

	9,877	136	10,192	128	9,753	122
Less: receipts and revenues credited to the Vote*	248		240		233	
	9,629	136	9,952	128	9,520	122

* Costs incurred for administrative services to the Canada Pension Plan are recoverable from the Plan.

Description

The Policy, Planning and Information Activity consists of three components:

Branch Management: Coordinates and supports the planning, management and administrative functions of the activity.

Policy Resources: Initiates and undertakes research and analyses of health and social policy issues in support of the policy development responsibilities of the Department, assesses options for future implementation, coordinates and prepares the Department's Environmental Assessment.

Information Systems: Implements and maintains information systems that support the development, management and evaluation of social policies and programs. These responsibilities include the provision of technical and financial assistance to provincial departments of social services for the development of welfare management information systems to assist them in automating the delivery of welfare programs cost-shared under the Canada Assistance Plan. (Contributions by provinces are shown on page 9-24.)

Performance Information/Resource Justification

The Policy, Planning and Information Activity provides authoritative and definitive advice and information to the Minister and to senior management of the Department on health and social policy issues, thereby enabling them to participate effectively in the policy making process. It also provides policy and program management and evaluation information and assistance to other federal entities, to provincial governments, to non-governmental organizations and to the public.

The dimensions of the programs on which this Activity has an impact include some $24 billion in departmental spending, as well as federal, provincial and private sector spending of approximately twice that amount.

C. Intergovernmental and International Affairs

Objective

To provide support to the departmental executive and program branches and coordination in the department's federal/provincial and international liaison activities.

Resource Summary

The Intergovernmental and International Affairs Activity accounts in fiscal year 1985-86 for 4 percent of the total resources of the Departmental Administration Program and 3 percent of the total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures	1,368	22	1,383	22	1,474	22
Grants	465	-	432	-	303	-
	1,833	22	1,815	22	1,777	22

Description

The Intergovernmental and International Affairs Activity consists of three components:

International Affairs: Oversees the Department's international health activities and specifically Canadian participation in international organizations for which it has a direct responsibility, such as the World Health Organization, the Pan American Health Organization, the United Nations (UN) Commission on Narcotic Drugs, etc., as well as bilateral health relations with foreign governments.

The Directorate also develops the Canadian position on social policy issues before the United Nations, coordinates participation in international social affairs, promotes Canadian participation in

UN Research and Training Programs, relations with the OECD in social, scientific and environmental matters, and pursues cooperative relationships with other international governmental and non-governmental organizations and their Canadian affiliates operating in the social welfare field.

Federal-Provincial and Interdepartmental Liaison: Coordinates relationships with the provincial/territorial governmental and other federal departments. This Directorate, which serves as the key anchor point for federal/provincial/territorial conferences of Ministers and Deputy Ministers of Health and Social Services, provides secretariat services for these conferences, monitors the network of federal/provincial advisory committees and working groups and engages in day-to-day liaison with central agencies. The Directorate provides representation of the Department on the Interdepartmental Committee on Human Rights.

International Information and Planning: Carries out activity planning including the coordination of international and federal/provincial inputs to Departmental planning processes. Its responsibilities include the procurement and distribution of information on international trends in health and welfare matters, provision for exchanges of information with other countries, and the organization of visits and study tours for foreign officials and scholars. The sub component is responsible for the development and implementation of special international events such as international years or the hosting of major international conferences in which the Department has the lead role in the federal government. The Directorate administers the World Health Organization Fellowships Programme which enables qualifying health professionals to obtain short-term studies abroad and also carries out Branch administrative functions.

Performance Information/Resource Justification

Although largely unquantifiable, the outputs of Intergovernmental and International Affairs can be grouped within four broad categories:

- enhanced flow of information and expertise to and from provincial/territorial and international sources and coordination of programmes for officials and delegations from foreign countries and delivery of World Health Organization Fellowships Programme;

- increased departmental visibility resulting from the development and maintenance of relationships with international organizations for which the Department is responsible and/or to which the Government of Canada is committed; examples include: participation in activities of the European Centre for Social Welfare Training and Research, the International Social Security Association, the International Council of Social Welfare and the International Union of Family Organizations;

- maintenance of open relationships with provincial/territorial authorities which are conducive to the fulfilment of departmental and national objectives; and

- provision of informed policy advice to the Minister, Deputy Minister and Associate Deputy Minister and departmental programs on international and federal/provincial/territorial issues.

D. Corporate Management

Objective

To provide a full range of management services to the Departmental Executive, as well as management services and functional direction to program branches, including personnel and financial resource management, audit and administrative and public affairs support.

Resource Summary

The Corporate Management Activity accounts in fiscal year 1985-86 for 63 percent of the total resources of the Departmental Administration Program and 71 percent of the total person-years.

* Costs incurred for administrative services to the Canada Pension Plan are recoverable from the Plan.

Description

The Corporate Management Activity consists of eight components:

Branch Management: Has the responsibility for the general orientation and coordination of management functions in the Corporate Management Branch, advising departmental officials on departmental managerial and administrative matters. It also provides financial and official languages services to all activities of the Departmental Administration Program.

Corporate Planning and Management Practices: Is responsible for contributing to departmental efficiency and effectiveness by improving the information, structure and environment for decision-making and by ensuring that objectives, goals and results are precisely identified and communicated throughout the department. This is ensured by the establishment and operation of a departmental planning system, the coordination and control of a departmental program to improve management practices and the coordination and integration of corporate management systems.

Personnel Administration: Is responsible for assisting departmental managers in achieving their overall program objectives and in discharging their responsibility for personnel management by providing services and advice in personnel matters and by providing for the fair and equitable treatment of employees. It also ensures the exercise of personnel authorities by delegated managers and personnel administrators in a responsible manner.

Financial Administration: Is responsible for ensuring that policies and systems of financial administration are established, maintained and operated; exercising financial and budgetary controls and coordination of departmental operations; advising senior departmental management on financial management matters.

Administrative Services: Is responsible for the development and implementation of effective departmental policies, guidelines and systems for the following services: Accommodation, Materiel, Departmental Library, Records, Paperwork, Security. It is also responsible for the management of services that are performed on a centralized basis such as Security Services and for the provision of advice, functional guidance and/or direction to the administrative areas of program branches.

Electronic Information Systems: Is responsible for developing and maintaining Department-wide information systems and networks, for ensuring compatibility of systems, hardware and software, for leading and coordinating long range and operational EIS planning and for setting standards and guidelines for hardware, software and protocols for communications.

Internal Audit: Appraises the control framework applicable to departmental programs and objectives, the efficiency of departmental operations, systems and procedures, as well as measures of efficiency and effectiveness used by management.

Public Affairs: Coordinates the development and implementation of efforts to inform the public about the Department's corporate and program objectives and undertakings, provides direction and guidance on public communications strategies and provides a feedback mechanism.

Performance Information/Resource Justification

The provision of services for the Department and/or Program in the areas of planning, personnel, financial and general administrative services represents one of the three key results for this activity. A number of achievement indicators which are used by management to assess performance have been established and include staffing actions and classification requests processed, number of invoices processed, number of tenant services requests processed. Despite the climate of economic restraint, the activity will try in fiscal year 1985-86 to maintain and/or upgrade the level of services provided in order to respond to the increased demand.

The provision of functional direction, advice, information and control to senior departmental management in the areas listed above is another key result of this activity.

Finally, the development of policies, systems, standards and procedures to support management is considered another key result due to the fact that this facilitates effective and efficient management throughout the Department. A measure of effectiveness is the ability to comply with the requirements and directives of central agencies and to meet these on a timely basis.

Employee Compensation Payments	3	5	1	23	32	28
Total Operating Cost	5,755	10,566	1,944	31,701	49,966	50,017
DEDUCT:						
Recoverable expenditures on behalf of the Canada Pension Plan	160	248	-	1,116	1,524	1,551
Net Operating Cost	5,595	10,318	1,944	30,585	48,442	48,466

C. Revenue Analysis

The recovery of costs incurred for administrative services to the Canada Pension Plan is the only major revenue within the Departmental Administration Program. It involves work performed by common operations services for the Canada Pension Plan in the areas of personnel and financial administration services, general administrative services, internal audit, etc.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Immigration Appeal Board

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis of the resources requested. Section II provides further information on costs and resources as well as special analysis that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from the Public Accounts. They are provided as an aid in assessing the program's financial performance over the last year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $4,039,000 in support of the 1985-86 Immigration Appeal Board. The remaining expenditures, estimated at $458,000 for pensions and other employee benefits, will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- The Board will schedule 150 weeks of hearings. Some 900 appeals, refugee claims allowed to proceed, and related matters will be decided. The turnaround time for cases required to be heard in court will average 18-20 months.

- An additional 1,500 applications for redetermination of claims to Convention refugee status will be considered in chambers.

2. Financial Summary

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Immigration Appeal Board	4,497	4,719	(222)
Person-years	89	89	-

Explanation of Change: The financial requirements for 1985-86 are 5% or $222 thousand lower than the 1984-85 forecast expenditures. This decrease is due primarily to:

- decrease in capital funds related to the implementation of the Information System Development Project of $222 thousand.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $354 thousand or 8% higher than the 1984-85 Main Estimates of $4,365 thousand (Extracts from Part II of the Estimates, page 4). The difference of $354 thousand reflects the following item:

- A Supplementary Estimate of $354 thousand for the implementation of the Information System Development Project.

B. Recent Performance

1. Highlights

Highlights of the program's performance during 1983-84 are outlined below.

A total of 2,608 decisions were rendered by the Board. Of these, 870 were heard in court; 263 were withdrawn and 1,475 were redeterminations of refugee claims heard in chambers.

The average processing time for cases heard at full public hearings was between 14-16 months. Most redeterminations were disposed of within 3 to 4 months.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Immigration Appeal Board	3,483	3,234	249
Person-years	68	72	(4)

Explanation of Change: During 1983-84, the Board was provided with additional resources of 7 person-years and $417,000 through Supplementary Estimates for purposes of opening a new office in Winnipeg. Due to difficulties in securing appropriate accommodation and staffing new positions, the Board did not utilize the majority of these additional resources.

C. Background

1. Introduction

The Immigration Appeal Board is an independent statutory judicial tribunal established under the Immigration Act, 1976 to hear and decide upon appeals made under sections 72, 73 and 79 of the Act, and to hear applications for redetermination under the provisions of section 70 of the Act.

2. Legal mandate

The Immigration Appeal Board receives its mandate under Part IV of the Immigration Act, 1976.

3. Program Objective

The objective of the Board is "to make available to persons who have been ordered removed from Canada or to persons in Canada whose relatives have been refused admission to Canada, an independent court to which they may appeal such decisions, not only on legal grounds, but also on discretionary grounds; and to permit the redetermination of refugee claims".

4. Program Description

Functions: Under the Immigration Act, 1976 the Immigration Appeal Board carries out two major functions:

Appeals: The Immigration Act, 1976 provides for four types of appeals that can be heard by the Board in a full public hearing (court): (a) under section 72, permanent residents of Canada or Convention refugees who have been ordered deported from Canada may appeal on legal and/or equitable grounds; (b) under section 72, persons with valid visas, who have been refused admission to Canada, may appeal on legal and/or equitable grounds; (c) under section 73, the Minister of Employment and Immigration may appeal to the Board from the decision of an adjudicator allowing a person to enter or remain in Canada; and (d) under section 79, a Canadian citizen, who has sponsored an application for landing in Canada made by member of the family class, may appeal the refusal of that application (see pages 16 to 18 for the extracts from the Immigration Act, 1976).

Applications for Redetermination of a Claim to be a Convention Refugee: A Convention refugee is any person who, by reason of a well-founded fear of persecution for reasons of race, religion, nationality, membership in a particular social group or political opinion, is unwilling to return to his country of nationality or habitual residence (see page 16 for extract from section 2 of the Immigration Act, 1976). Persons whose claim to be a Convention refugee has been refused by the Minister of Employment and Immigration may apply to the Board for a redetermination of their claim. An application for redetermination is first considered by a quorum of the Board in chambers (out of court). The application must be accompanied by a statutory declaration setting out the details of the applicant's claim and by the transcript of an examination under oath in respect of his claim. The Board considers these documents and if it finds that there are reasonable grounds to believe that the claim upon a hearing could be established, it must allow the application to proceed to a full public hearing. In all other cases it must refuse to allow the application to proceed and is required to determine that the applicant is not a Convention refugee.

Procedures: Unless an in camera hearing is requested by one of the parties, all appeals and applications allowed to proceed and matters arising out of these actions are heard in full public hearings. The hearings involve presentation of evidence (written or oral) and legal arguments. The Minister of Employment and Immigration is a party to all appeals and applications for redetermination which have been allowed to proceed. The Minister is represented before the Board by designated officers within the Canada Employment and Immigration Commission (CEIC).

Written reasons for judgement must be prepared by the Board in all sponsorship appeals and in any other case at the request of one of the parties. Decisions of the Board are reviewable by the Federal Court of Appeal.

5. Program Organization for Delivery

The Immigration Appeal Board has its headquarters in Ottawa. Permanent courts are established in Ottawa, Montreal, Toronto and Vancouver. A permanent registry office is located in Winnipeg. The board sits on a regular basis at its regional courts, and travels to other cities in Canada as the volume of cases requires.

The Board may consist of no less than seven (7) and not more than eighteen (18) members, including a Chairman and five (5) Vice-Chairmen. The Board presently consists of the Chairman, five (5) Vice-Chairmen and eleven (11) members, all of whom are appointed by the Governor in Council. Three (3) members constitute a quorum of the Board.

Two branches provide administrative support to the Board. The Operations Branch, under the direction of the Senior Registrar, is responsible for operational support including the administration of the courts, the provision of legal advice and the control of court documents. The Finance and Administration Branch, headed by a Director, is responsible for financial, personnel and administrative support. Figure 3 shows the organization structure of the Board.

Figure 3: Organization Structure

D. Planning Perspective

1. Environment

The actions before the Immigration Appeal Board result directly from decisions made within the Canada Employment and Immigration Commission. While appellants before the Board represent a small number of the immigrant population, major changes to the immigrant intake levels, as set by CEIC, could affect the number of appeals reaching the Board, as could major policy changes or changes to the legislation. The number of applications for redetermination of a claim to be a Convention refugee made to the Board is influenced by the global refugee situation.

Bill C-58, passed in June 1984 amended the Immigration Act, 1976 to provide that any three members of the Board may constitute a quorum. Prior to the amendment either the Chairman or a Vice-Chairman was required to hear every case brought before the Board. At the same time the Minister appointed Dr. W. Gunther Plaut to study the refugee determination process in Canada and to identify various alternatives for the fair and expeditious processing of claims to Convention refugee status.

2. Initiatives

Major changes in the Board's direction or in the nature of its operation are dependent upon changes to the legislation.

3. Program Effectiveness

While the number of decisions made and the turnaround time are significant factors in measuring the Board's effectiveness, more important is the obligation to ensure and protect the rights of the parties to be heard in a manner and atmosphere consistent with the spirit of the Immigration Act, 1976 and the principles of natural justice. The Board ensures that this obligation is met by monitoring the internal systems which support the judicial functions to exact compliance with the law and established practices and procedures in the administration of the courts and the registry.

The number of decisions made will depend upon the number of panels which can be convened. The mix of applications for redetermination of refugee claims and appeals and the readiness of the parties to proceed once a case has been scheduled will also affect the number of decisions.

The Board considers that ideally a decision should be made within three months and has defined a reasonable turnaround time as not more than six months. Given the existing legislation governing the

composition of the Board, and the current workload trends, the Board will fail to reach this goal and the turnaround time will continue to increase. By the end of 1985-86 it is expected that appellants will be required to wait 18 to 20 months before their appeals are decided. Refugee claimants who have applied for a redetermination of their claims by the Board will face a waiting period of 4 to 5 months before a decision to allow or to refuse to allow the claim to proceed will be made. A further 18-20 months could elapse before those allowed to proceed will be heard in court.

4. Performance Information/Resource Justification

The Board's workload consists primarily of two major items, appeals and applications for redetermination. Applications for redetermination are initially reviewed in chambers in order to determine if they will be allowed to proceed to a full hearing whereas all appeals are heard at a full hearing. Figure 4 presents the workload for the Board. The cases heard at a full public hearing shown in Figure 4 include appeals, matters arising out of appeals, and applications allowed to proceed.

Figure 4: Workload Information

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Cases heard at Full Public hearing			
Pending at the beginning of the year	2,382	1,732	1,087
Received	1,800	1,800	1,755
Withdrawn	250	250	240
Heard and decided	900	900	870
Pending at year end	3,032	2,382	1,732
Process time (Months)*	18-20	16-18	14-16
Cases heard in Chambers			
Pending at the beginning of the year	388	308	251
Received	1,600	1,600	1,555
Withdrawn	20	20	23
Heard and decided	1,500	1,500	1,475
Pending at year end	468	388	308
Process time (Months)*	5	4	3

* In considering the average processing time within the Board it must be recognized that the Board has a limited control over the actual hearing date. In general, cases are called for scheduling in the order in which the originating notices are filed. However postponements and adjournments can result in further delays in rescheduling. In some cases of applications for redetermination of refugee claims the Board is not able to proceed with a redetermination (in chambers) because of incomplete documentation.

The intake of cases which must be heard at a full public hearing is expected to remain at the 1,800 level in 1985-1986. The Board plans to schedule 150 weeks of public hearings with an average of six cases decided each week.

The intake of applications for redetermination of refugee claims is expected to reach 1600. Since there is no requirement for the parties to be present, the Board is able to schedule these hearings with greater flexibility than for those cases required to be heard in court. It is planned to schedule most of these cases for consideration in chambers.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Operating expenditures for the Immigration Appeal Board are presented in Figure 5.

Figure 5: Expenditures by Object($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	3,273	3,230	2,516
Contributions to employee benefit plans	458	420	355
	3,731	3,650	2,871
Goods and Services			
Transportation and communications	424	424	354
Information	36	36	21
Professional and special services	138	197	98
Rentals	19	19	19
Purchased repair and upkeep	18	18	32
Utilities, materials and supplies	118	88	53
All other expenditures	3	3	1
	756	785	578
Total operating	4,487	4,435	3,449
Capital	10	284	34
Total expenditures	4,497	4,719	3,483

2. Personnel Expenditures

Figure 6: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management					
Board Members	18	18	14	54,710 - 80,640	66,008
Senior Management	2	2	2	50,350 - 59,220	54,940
Scientific and Professional	4	3	1	20,523 - 88,120	30,245
Administration and Foreign Service	17	16	16	13,912 - 57,987	35,323
Technical	2	2	-	12,635 - 57,764	32,635
Administrative Support	46	48	46	12,636 - 31,946	25,296

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 7: Program Costs ($000)

	1985-86 Operating Expenditures	Add* Other Costs	Total Net Cost	Total 1984-85
Immigration Appeal Board	4,497	822	5,319	5,460

* The adjustment made to the voted budgetary operating expenditures to arrive at total net cost consists primarily of accommodation provided without charge by Public Works.

C. Extracts from the Immigration Act

1. Section 2 - Interpretation

"Convention refugee" means any person who, by reason of a well-founded fear of persecution for reasons of race, religion, nationality, membership in a particular social group or political opinion, (a) is outside the country of his nationality and is unable or, by reason of such fear, is unwilling to avail himself of the protection of that country, or (b) not having a country of nationality, is outside the country of his former habitual residence and is unable or, by reason of such fear, is unwilling to return to that country.

The term "Convention" in the expression "Convention Refugee" refers to the United Nations Convention Relating to the Status of Refugees signed at Geneva on the 28th day of July, 1951 and includes the Protocol thereto signed at New York on the 31st day of January, 1967.

2. Section 70 - Application for Redetermination

(1) A person who claims to be a Convention refugee and has been informed in writing by the Minister pursuant to subsection 45(5) that he is not a Convention refugee may, within such period of time as is prescribed, make an application to the Board for a redetermination of his claim that he is a Convention refugee.

(2) Where an application is made to the Board pursuant to subsection (1), the application shall be accompanied by a copy of the transcript of the examination under oath referred to in subsection 45(1) and shall contain or be accompanied by a declaration of the applicant under oath setting out:

(a) the nature of the basis of the application;

(b) a statement in reasonable detail of the facts on which the application is based;

(c) a summary in reasonable detail of the information and evidence intended to be offered at the hearing; and

(d) such other representations as the applicant deems relevant to the application.

3. Section 72 - Removal Orders

(1) Subject to subsection (3), where a removal order is made against a permanent resident or against a person lawfully in possession of a valid returning resident permit issued to him pursuant to the regulations, that person may appeal to the Board on either or both of the following grounds, namely,

(a) on any ground of appeal that involves a question of law or fact, or mixed law and fact, and

(b) on the ground that, having regard to all the circumstances of the case, the person should not be removed from Canada.

(2) Where a removal order is made against a person who

(a) has been determined by the Minister or the Board to be a Convention refugee but is not a permanent resident, or

(b) seeks admission and at the time that a report with respect to him was made by an immigration officer pursuant to subsection 20(1) was in possession of a valid visa,

that person may, subject to subsection (3), appeal to the Board on either or both of the following grounds, namely,

(c) on any ground of appeal that involves a question of law or fact, or mixed law and fact, and

(d) on the ground that, having regard to the existence of compassionate or humanitarian considerations, the person should not be removed from Canada.

(3) Where a deportation order is made against a person described in paragraph (2)(a) or (b) who

(a) is a person with respect to whom a certificate referred to in subsection 40(1) has been issued, or

(b) has been determined by an adjudicator to be a member of an inadmissible class described in paragraph 19(1)(e), (f) or (g),

that person may appeal to the Board on any ground of appeal that involves a question of law or fact, or mixed law and fact.

4. Section 73 - Appeal by Minister

The Minister may appeal to the Board on any ground of appeal that involves a question of law or fact, or mixed law and fact, from a decision by an adjudicator that a person who was the subject of an inquiry is a person who may be granted admission or is not a person against whom a removal order should be made.

5. Section 79 - Appeal by Sponsor

(1) Where a person has sponsored an application for landing made by a member of the family class, an immigration officer or visa officer, as the case may be, may refuse to approve the application on the grounds that

(a) the person who sponsored the application does not meet the requirements of the regulations respecting persons who sponsor applications for landing, or

(b) the member of the family class does not meet the requirements of this Act or the regulations,

and the person who sponsored the application shall be informed of the reasons for the refusal.

(1.1) Notwithstanding subsection (1), where an application for landing made by a member of the family class is refused on the grounds that the member of the family class is a person described in any of paragraphs 19(1)(d) to (g), the person who sponsored the application shall be informed of those grounds but not of the reasons on which those grounds are based.

(2) A Canadian citizen who has sponsored an application for landing that is refused pursuant to subsection (1) may appeal to the Board on either or both of the following grounds, namely,

(a) on any ground of appeal that involves a question of law or fact, or mixed law and fact; and

(b) on the ground that there exist compassionate or humanitarian considerations that warrant the granting of special relief.

(3) The Board may dispose of an appeal made pursuant to subsection (2) by allowing it or by dismissing it, and shall notify the Minister and the person who made the appeal of its decision and the reason therefor.

(4) Where the Minister has been notified by the Board that an appeal has been allowed pursuant to subsection (3), he shall cause the review of the application to be resumed by an immigration officer or visa officer, as the case may be, and the application shall be approved where it is determined that the person who sponsored the application and the members of the family class meet the requirements of this Act and the regulations, other than those requirements upon which the decision of the Board has been given.

1985-86 Estimates

Part III

Indian and Northern
Affairs Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are six chapters in this document. The first provides an introduction to be Department. The other present the Program Expenditure Plans for five departmental programs.

Chapters two to six begin with extracts from Part II of the Estimates for the particular Program being described. This is to provide continuity with the other Estimates documents. Also included are extracts from Volume II, of the Public Accounts for chapters three to six. These are provided as an aid in assessing the program's financial performance over the past year.

Each Program expenditure plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters while detailed tables of contents are provided for each program. Within Section I of each Program Expenditure Plan, a final summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Departmental Summary

2183

Roles and Responsibilities

The Department of Indian Affairs and Northern Development Act, 1970 (as amended) defines the scope of the Department's responsibilities. Broadly speaking, the Department:

- fulfills the lawful obligations of the federal government arising from treaties and the Indian Act (for example, paying treaty benefits and administering Indian lands and trust monies);

- provides for the delivery of basic services (such as education, social assistance, housing, and community infrastructure) to status Indian and Inuit communities;

- assists Indians and Inuit to acquire employment skills and to develop viable businesses;

- negotiates the settlement of accepted claims relating to aboriginal title not extinguished by treaty or other means, or relating to past non-fulfillment of government obligations;

- provides transfer payments to the governments of Yukon and the Northwest Territories to assist them in providing public services to territorial residents in accordance with the Yukon and Northwest Territories Acts and other agreements;

- provides for the balanced development of the North, through management of natural resources (oil and gas, minerals, water, forests and lands), protection and management of the northern natural environment, including Arctic seas, fostering of economic and employment opportunities for northerners, and funding of social and cultural programs; and

- fosters political development of the two northern territories and coordinates federal policies and programming for the North.

The Department is seeking to fulfill these responsibilities by promoting self-reliance on the part of Indian bands and responsible government in the North.

- In response to the special committee on Indian self-government, native people will expect a continuation of negotiations towards the formal recognition of some form of Indian self-government.

- Claims settlements also favour self-reliance. For example, the Cree-Naskapi Act passed in June, 1984, provides for a broad measure of self-government for the Crees and Naskapis of northern Québec. This law fulfilled substantial parts of the federal government's obligations under the James Bay and Northern Québec Agreement (1975).

- With respect to the territorial governments, the Department, in 1982, renewed the Federal Government's committment to responsible government in the North, accepted in principle the sub-division of the Northwest Territories, and agreed to move toward a formula based approach to providing financial support to the territories. Acceptance in principal was made subject to conditions on boundary location, distribution of government powers, settlement of land claims and continuing support of division by N.W.T. residents. Formula financing will be introduced in 1985-86.

The Department is also a major contributor in support of the on-going constitutional discussions regarding, inter alia, the definition of the rights of Canada's aboriginal peoples.

Departmental Organization and Programs

Indian and Northern Affairs Canada (INAC) has grouped its activities into five programs:

- Indian and Inuit Affairs Program;
- Northern Affairs Program;
- Transfer Payments to the Territorial Governments Program;
- Native Claims Program; and
- Departmental Administration Program.

The organizational structure of the Department is aligned with its programs as shown in Figure 1. The organization is highly decentralized with approximately 75% of its employees delivering over 500 distinct services in 11 regions comprising 49 district offices. This high degree of decentralization is required to respond to the varying needs of a clientele that is highly diversified culturally, economically and geographically.

*Note: This does not include a statutory item of $2,886,000 for the Environmental Studies Revolving Fund.

Departmental Priorities

The Department's principal areas of emphasis over the next few years are:

- continuing participation in the ongoing constitutional process leading to clarification of the rights of Canada's aboriginal peoples;
- the elimination of discrimination on the basis of sex from the Indian Act in conformity with the Charter of Rights;

- developing legislative framework options for Indian self-government, as well as introducing interim administrative changes to support the objective of self-government;

- strengthening the cooperative relationship between the Department and its client groups through the collective development of consultation processes;

- meeting outstanding lawful obligations and resolving grievances and claims with respect to Indian and Inuit people;

- ensuring efficient implementation of land claims agreements reached between native people and the federal government;

- strengthening Indian economic development programs aimed at improving self-reliance and reducing the need for maintenance-oriented programs;

- improving the delivery of services that meet Indian needs in the areas of housing, education, infrastructure, band government and other social service programs, including improved access to appropriate provincial services;

- providing a policy and regulatory framework for economic development in the North, in balance with the environmental, social and cultural concerns of northerners; and

- promoting constitutional development and establishing an appropriate timetable for the devolution of additional responsibilities to the territorial governments.

Foreword

In order to assist the reader to better understand terminology generally used concerning the Department and within the text of the Indian and Inuit Affairs Program, the following definitions are provided:

Aboriginal:

- Generally speaking, refers to the descendants of the original inhabitants of Canada. The Constitution Act, 1982 specifies that aboriginal peoples include the Indian, Inuit and Métis peoples of Canada. There are no specific legal definitions of the three aboriginal peoples identified in the Constitution. The following, however, provides a general description of each group.

Indian:

- A status Indian is a person registered or entitled to be registered as an Indian according to the Indian Act. Approximately 50% of the status Indians in Canada are treaty Indians, that is, persons who belong to a body or band of Indians who were signatories to a treaty with the Crown. The Department, by virtue of the Indian Act, is responsible to provide support and services to status Indians only.

- Non-status Indians generally include Indian peoples or those descended from them who, for one reason or another, have lost their right to be registered as Indians as defined by the Indian Act. This group includes Indian women who have married non-Indian men.

Inuit:

- The Inuit are the aboriginal inhabitants of northern Canada, who generally reside north of the 60th parallel, although some live in northern Québec and Labrador. The federal government's power to make laws in respect to Indians, and lands reserved for Indians was interpreted to extend to Inuit by the Supreme Court of Canada in 1939. However, Inuit are not covered by the Indian Act.

Métis:

- There are at least two different views about the meaning of the term Métis. Some maintain that the term refers to those of aboriginal ancestry who are descended from the historic Métis community of Western Canada. Others say that Métis refers to anyone of aboriginal ancestry who identifies as Métis, as distinct from Indian or Inuit. The Department has no legal responsibilities towards Métis.

Location of Aboriginal Peoples:

Indians: As of September 1984 there were 581 Indian bands across Canada and approximately 332,000 status Indians. The majority of Indians live in bands with a membership of less than 1,000. Approximately 39% of bands have 301 to 1,000 membership. Approximately 31% have populations between 101 and 300 and 16 bands (3%) have a membership over 2,000. The largest band has a membership of about 10,000 and the average band has about 550 members.

The majority of Indian bands south of the 60th parallel are located on reserves and lands set aside for their exclusive use through treaties and other legal arrangements. In the Yukon and Northwest Territories, only a small number of Indians live on reserve lands. There are 2,254 separate parcels of reserves and lands in Canada, with a total area of approximately five million hectares.

Inuit: There are approximately 25,400 Inuit who live in small communities in the Mackenzie Delta, along the mainland coast of the Northwest Territories, on the shores of Hudson and Ungava Bays, in Labrador and in settlements on the Arctic Islands. These communities are situated for the most part on bays, river mouths, inlets or fiords. The Indian and Inuit Affairs Program serves only those Inuit, numbering 7,000 living in Northern Québec and Labrador. Northern Affairs manages programs providing services to the other 18,000 Inuit resident in the Northwest Territories either directly or through the NWT government.

In the text of the Indian and Inuit Affairs Program where the term Indian is used, by inference this includes Inuit. Whenever the term Indian and Inuit is used it is to ensure clarity and accuracy within the context of the statement.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $1,484,116,000 in support of the Indian and Inuit Affairs Program. The remaining expenditures, estimated at $20,938,000, will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Highlights

During the 1985-86 Estimates year the Indian and Inuit Affairs Program expects to undertake the following:

- to pursue the concept of Indian self-government by supporting initiatives and changes in the Program that will facilitate the transition to Indian nationhood (see page 2-22);

- to prepare for the removal of provisions in the Indian Act that discriminate against Indian women and their children (see page 2-22);

- to pursue means to ease current administrative constraints in respect of service delivery and to remove impediments to effective community decision-making and financial planning (see page 2-23);

- to improve the administration of Reserves and Trusts services to bands by the computerization of present systems and to provide increased support on litigation issues (see page 2-23);

- to upgrade educational capital facilities and enhance educational services to meet the special needs of Indian students (see page 2-23); and

- to assist, through financial and advisory support, Indian and Inuit communities to deal effectively with the impact of resource development projects (see page 2-23).

B. Financial Summary by Activity

	1,505,054	1,467,148	37,906	
Authorized person-years	4,400	4,377	23	

The increase in Estimates 1985-86 over Forecast 1984-85 amounts to $37,906,000 or 2.6%. This increase results mainly from allowances for inflation. Forecast 1984-85 is greater than Main Estimates 1984-85 by $67,458,000 or 4.8% as a result of Supplementary Estimate funding. Major items in Supplementary Estimates included $21,247,000 for increased Education and Social Service Costs and $15,066,000 for the Canada Works and Indian Summer Canada Programs.

Revenues generated by the Program in the Economic Development and Reserves and Trusts activities are credited to the Consolidated Revenue Fund and are not available for use by the Program.

C. Background

1. Introduction

The Indian and Inuit Affairs Program provides a wide range of services of a federal, provincial and municipal nature to Indians and Inuit. The focus is on the cultural, social and economic concerns of status Indians and the Inuit of Northern Quebec and Labrador.

In carrying out its functions, the Program works in close cooperation with other federal government departments and agencies such as National Health and Welfare, Department of Justice, Canada Employment and Immigration Commission, R.C.M.P., and Canada Mortgage and Housing Corporation. In addition, program officials play a number of roles to provide training and advice, technical expertise, advocacy, the monitoring of operations and negotiating with federal/provincial/municipal governments for the delivery of services.

The Program delivers services to Indians and Inuit through six operational sectors: Reserves and Trusts, Education, Social Development, Capital Facilities and Community Services, Economic Development, and Band Management. These operations are supported by the Program Management and Program Administration activities.

Reserves and Trusts exists to protect the rights and interests of the Indian peoples of Canada. As described in the Indian Act, reserve lands, their resources, estates, band trust funds, membership and treaties are dealt with by Reserves and Trusts.

The educational services give access to elementary/secondary schools and to post-secondary institutions and also support a variety of cultural endeavours. Social development services provide income maintenance and child welfare and family services to individuals and families in need.

Economic Development provides assistance to Indians, Indian bands and Inuit people in creating and developing employment-related opportunities. This Activity also supports Indian and Inuit communities in the area of resource development impact studies and negotiations.

Capital Facilities and Community Services supports the physical improvement and protection of communities including housing, essential community services, schools and recreational facilities.

Band Management provides assistance to Indian bands and Inuit communities in the areas of management planning, community-based development planning and policy development. It also supports bands in program administration and service delivery, and assists them in increasing their capacity to govern their communities.

Program Management provides for management support at the headquarters and regional offices as well as staff services such as policy development and program planning.

Program Administration provides for departmental common service funding in headquarters and services in regional offices such as personnel, finance and public information in support or on behalf of the regional operations.

2. Legal Mandate

The Program derives its legal mandate from the Indian Act, the Department of Indian Affairs and Northern Development Act, 1970 (as amended) and administers various other acts (for detailed listing see Section III, page 2-106).

3. Program Objective

In keeping with the principles of self-development, access of opportunity, responsibility and joint participation within Canadian society, to assist and support Indians and Inuit in achieving their educational, cultural, and social, as well as their economic and community development needs and aspirations, and to ensure that Canada's constitutional and statutory obligations and responsibilities to the Indian and Inuit peoples are fulfilled.

4. Program Organization for Delivery

Activity Structure: The Indian and Inuit Affairs Program consists of 11 activities, nine of which are operational and two which carry out program management and administrative functions. Figure 4 presents the activity structure of the Program.

Figure 4: Activity Structure

Organization Structure: The Program's headquarters is located in the National Capital Region where five directors general report through the Executive Director General to the Assistant Deputy Minister, Indian and Inuit Affairs. National Headquarters is responsible for policy development, resource allocation, planning and monitoring on a national basis.

Program services are delivered through nine geographically dispersed regional offices. Each regional office is headed by a regional director general (regional directors in NWT and Yukon) who, as the senior corporate representative in the region, reports to the ADM. A statement of each region's resource requirements may be found on page 2-18.

Within the regions there are 33 district offices, and five service centres servicing, as of September, 1984, 581 bands, 113 Indian organizations and 14 Inuit communities and settlements. A listing of regional and district offices is provided in Section III, page 2-107. Through these offices approximately 450 services are delivered. Services are provided through a variety of methods such as direct service delivery, grants, contributions and loans.

In 1983/84 close to 60% of the Program expenditures were made through contribution arrangements to Indian bands. The bands are in turn responsible for providing the services for which a contribution arrangement was made. Services are also provided through other methods such as direct service delivery and loans. Detailed descriptions of service delivery mechanisms are in the respective activity presentations in Section II, Analysis by Activity. Service delivery is supported by Program Management and Program Administration.

Figures 5 and 6 present resources and organizational responsibilities for the activities of the Program.

D. Planning Perspective

1. Environment

Demography: Of approximately 332,000 status Indians 235,000 live on reserves or Crown Land and 97,000 live off-reserve, generally in large urban centres. The majority of Program services are provided to bands and individual Indians living on reserves or Crown lands. Indians living off-reserve are basically entitled to the same range of services as those Indians living on reserves if they meet the eligibility criteria for a service. As of September, 1984 there were 581 bands which have memberships ranging from 10 to over 10,000. There are 2,254 separate parcels of reserves and lands totalling approximately 5 million hectares. Reserves vary in size from less than one hectare to several hundred thousand hectares. These reserves and lands are located all across Canada and while some are located in or near urbanized areas the majority are located in rural and remote areas, some as far as 800 air kilometers from the nearest town. The remoteness of many Indian reserves results in the lack of infrastructures that are comparable to those of reserves located in urbanized areas.

The diversity of band population numbers and their locations make it difficult for the Program to achieve economies of scale in the delivery of services. There are large variances in the costs of service delivery to Indians because of their geographical location. Figure 7 illustrates the general location of Indian bands.

Figure 7: Location of Indian Bands

The growth rate of the Indian population has declined dramatically from 3.3% in 1976 to its current rate of 2.5%, yet it is still higher than the 1.4% national growth rate. This will result in increasing demands for jobs, housing and possibly social assistance as the higher birth rate has been the case for more than a decade.

The general location of approximately 25,000 Inuit is illustrated in Figure 8. The Indian and Inuit Affairs Program is responsible for only those Inuit (approximately 7,000) living in Northern Quebec and Labrador.

Figure 8: Location of Inuit Communities

Indian Self-Government: The objective of Indian self-government is to break the dependency cycle and to recognize Indian communities, through constitutional and non-constitutional measures, to be self-governing with responsibility to constituents for the provision of services and the well-being of their people. Efforts continue to be made towards the enhancement, both in quality and quantity, of Indian control of their own affairs. Many of the details of the restructured relationship will have to be worked out after careful consideration and full consultation with Indian people. Nevertheless, some aspects of the restructured relationship such as improved funding and administrative arrangements can be undertaken now.

Federal/Provincial Responsibilities: The constitutional process is of particular concern because of the shared federal-provincial jurisdiction issues regarding Indians. Jurisdictional interpretations and financial responsibility vary from province to province for Indians residing both on and off-reserve. The fundamental jurisdictional issues must be addressed in order for Indians to receive the same level of service as non-Indians. Also, there is a requirement for extra services to meet the unique circumstances of Indians, particularly for preventive services and training opportunities.

Program Transfers to Indian Control: The rate of transferring service delivery responsibility from the Department to Bands, Associations and Tribal Council administration, while continuing, has slowed over the past four years. The percentage of the Program's total budget managed by Bands, Associations and Tribal Councils is at about 57% for 1983-84 and has remained relatively constant since 1979-80, as compared to approximately 20% in 1971-72. Factors influencing the slowdown since 1979-80 include solvency concerns of bands, general resource limitations relative to the increased costs of the transfer of service delivery, administration and management to bands, and saturation in some program areas.

2. Initiatives

Program initiatives and emphasis over the next few years will include the following:

- During 1985-86, the Program will review its organizational structures and procedures in order to improve its advisory and support functions with respect to client needs and expectations. Transitional arrangements for those bands wishing to opt-in to any new proposed legislation will continue to be studied with respect to financial and socio-economic impacts.

- The Program is preparing for anticipated changes to the Indian Act. Policies concerning Indian persons who have for a variety of reasons lost Indian status (i.e. marriage to a non-Indian) are being formulated. The implications in terms of the number of non-status persons regaining status and the requirement for additional and increased volumes of services is being reviewed. The Program will, through selected studies, determine the impact of such amendments. These studies will be conducted within existing resource levels.

- In fiscal year 1984-85, the Department obtained approval to fund contribution agreements on a 180-day basis provided that properly audited reports were provided at the end of the six month period. The Department intends to continue such efforts to re-evaluate and modify administrative practices with a view to cutting down time lags and reducing the burden of the bureaucratic process on Indian bands and Inuit communities.

- Reserves and Trusts will continue the initiative of developing automated systems to provide the Department and Indian communities with more timely and accurate data and information in the areas of Land Registry, Membership Registry, Trust Accounting, Election and By-Law Registry and Oil and Gas Royalty Revenue. During 1985-86 Reserves and Trusts will increase funding to approved test-cases which require judicial resolution.

- An increase in capital funding will help meet the accelerating demand for infrastructure and education services in Indian communities. In 1985-86, these additional funds will allow the Program to upgrade existing facilities to acceptable standards in the areas of health and safety and to address the backlog in infrastructure and facilities.

- The special needs of Indian students such as language and cultural education as well as education standards will be addressed in cooperation with the Assembly of First Nations.

- Resource development impact funding and services provides Indian and Inuit reserves and communities with the means to acquire research, advisory services and negotiating expertise to arrive adequately at acceptable terms of resource developments that impact on their environment. An example was the signing in 1983 by the Lax Kw'alaans Band with Dome Petroleum of an agreement that could result in excess of $39 million accruing to the Band as well as other benefits. Currently there are 88 resource development projects in progress and $5.5 million is being funded to address the satisfactory negotiations of agreements between bands and developers. It is anticipated that a number of significant development agreements will be concluded during fiscal year 1985-86.

3. Program Effectiveness

The Program's primary objective is to assist the Indian and Inuit peoples in meeting their cultural and socio-economic needs and in attaining their aspirations. Various performance indicators show the progress that has been made in the socio-economic areas and changes in how they are now being addressed. A major indicator is the fact that approximately 60% of the Program's expenditures for services are being managed by bands in 1983-84 compared to approximately 20% in 1971-72.

The differences in the economic well-being of native peoples and non-native Canadians is pronounced. For example, the 1981 census showed that the average Indian income was approximately two-thirds of the non-native average. The unemployment rate among Indians residing on reserves and Crown lands is approximately five times the national average. An effect of such disparity has been in the past a movement of Indians off their reserves and into urbanized centres. Figure 8 shows the percentage of Indians who live off-reserve or not on crown lands. The continuation of the migration - particularly because it is disproportionally made up of younger Indians-will impede on-reserve progress. Recently, however there has been reduced off-reserve migration due to a general economic recession thus creating extra demands for community services.

Figure 9: Percentage of Indians Living Off-Reserve and not on Crown Lands

During the last 10 years the Program has increased expenditures (in real dollars) by an average of 5% per year. Coupled with this enlarged support is the thrust of the Department to have the bands manage the funds (through grants and contributions) and deliver the services. A key aspect of greater band responsibilities is shown through the education activities where the number of band managed schools has risen from 115 to 181 over the last three years.

Because of the high unemployment rate on reserves the Program supports Indian and Inuit entrepreneurs, provides funds for job creation projects and sponsors job skill improvement courses. An example of the effect of this support in terms of the number of work weeks and jobs expected to be created during 1984-85 is 97,824 and 5,514 respectively. Substantial increases have been made in the last few years. This progress is further enhanced through the recent job creation thrust of the Native Economic Development Program of the Department of Regional and Industrial Expansion. The Department has programs that support initiatives to employ native people and in 1984-85 23% of the staff were native.

Even with employment development thrusts of the Program there are many individuals living on-reserve who are in need of social assistance. As shown in Figure 10 more than 50% of the on-reserve Indian population is receiving some form of social assistance. When compared to the Canadian population as a whole it is seen that the gap between the proportions of Indians and all Canadians receiving social assistance remains great.

Figure 10: Percentage of Population Receiving Social Assistance - Indian vs. National Average

Of particular importance to Indian and Inuit communities is the percentage of children in care. As was noted in the Report of the Special Committee on Indian Self-Government in Canada (1983), the proportion of Indian children in care is more than five times the national rate. The Program, in cooperation with Indian bands and parents, is making efforts to reduce the gap (see Figure 11).

Figure 11: Percentage of Indian Children in Care vs National Average

A critical area of concern and effort is education. The Indian act empowers the Minister to provide educational services to Indian students from ages six to 18 living on reserves or Crown land. In addition, participation in post-secondary institutions is encouraged through the provision of grants to eligible Indians and Inuit. Figure 12 and 13 show the change in departmentally funded Indian enrolment in elementary/secondary schools and in post-secondary institutions. The growth of the former has been higher than the national rate because of the higher birth rate of the Indian population. The pronounced increase in Indian post-secondary full-time enrolment is largely a result of the Department's Post-Secondary Education Assistance Program.

Figure 12: Elementary/Secondary School Enrolment

The decrease in the last few years is due to the federal governments clarification of policy and change in funding off-reserve students in general and the elimination of funding off-reserve urban students for their books and supplies. The decrease shown between 1980-81 to 1982-83 does not necessarily mean that approximately 5,000 students ceased attending school. It means the Department discontinued funding all off-reserve students thereby striking them from the departmental data collection process.

Figure 13: Post-Secondary School Enrolment

During the last 10 years there has been a significant shift towards greater band control of education. This is shown by the fact that 47% of departmental education expenditures now go through bands. Of considerable significance, the number of school committees has grown from 250 to 450 over this period.

Schools and houses are two of the most significant types of capital works projects funded through the Indian and Inuit Affairs Program. Over the last several years the number of houses built on reserves has grown substantially as illustrated in Figure 14. Despite this increase about one in three Indian on-reserve homes was crowded, as defined by the 1981 census, which compares to 1 in 43 for non-Indian homes. The Department is conducting a major evaluation on housing and will report in subsequent expenditure plans.

Figure 14: Changes in Housing Backlog

Despite the difficulty of measuring the overall impact of the Program, the Department and the Program are committed to establishing indicators of performance for all activities. When developed, these will measure and report upon effectiveness, efficiency and the quality of service received by client groups.

Section II
Analysis by Activity

A. Reserves and Trusts

Objective

To fulfill the legal obligations of the Government of Canada in matters respecting Indians.

Resource Summary

This activity accounts for 2.1% of the total Indian and Inuit Affairs Program expenditures and 7.4% of the person-years.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Lands, Estates and Membership	16,334	229	14,275	227	13,035	228
Indian Natural Resources and Trusts Funds	4,417	57	4,744	56	3,661	57
Institutions and Treaty Management	10,306	31	9,501	31	3,656	31
Litigation Support	1,334	9	779	10	1,394	9
	32,391	326	29,299	324	21,746	325

Of total expenditures in this activity, 41.2% relate to personnel costs, 13.3% to professional and special services and 39.8% to transfer payments.

Description

The Reserves and Trusts Activity exists to protect the rights and interests of the Indian peoples of Canada as specified in the Indian Act, the Financial Administration Act, other legislation and various Indian treaties. The Minister, pursuant to the Indian Act, exercises trust authority on behalf of the Crown to administer reserve lands and the natural resources found thereon; to administer the trust funds of bands and the estates of certain individual Indians; to determine entitlement to Indian status and band membership; and to administer the elections of band councils, the passage of by-laws; and the Crown's treaty obligations.

The four sub-activities of Reserves and Trusts are:

Lands, Estates and Membership: This sub-activity ensures that Indian lands are well managed, the estates of deceased and certain living Indians are properly administered and all status Indians are duly registered.

The Reserves and Trusts Branch administers 2,254 reserves and other lands, having a total area of five million hectares, through the negotiation and registration of transactions in the form of Certificates of Possession, leases, permits and various contracts for the right to use, occupy or have an interest in these lands. All such transactions must be executed by the Crown since title is vested in the Crown.

The Activity currently administers the estates of more than 1,000 deceased Indians, with $1 to 5 million of cash assets on deposit at any time. Funds of Indians such as minors and those mentally incompetent are also administered in over 20,000 individual interest-bearing accounts with a total value of $70 million.

The responsibilities of Reserves and Trusts involve the registration of persons meeting the criteria for determining entitlement of Indian status and band membership. The accuracy of current membership registers is fundamental to all other responsibilities of Reserves and Trusts, as they affect land and resource administration, band fund administration and the administration of elections and referenda.

Indian Natural Resources and Trust Funds: Reserves frequently contain natural resources such as minerals, oil and gas, and forests. The Branch administers resource transactions, generally in the form of leases, permits and various contracts, for the extraction and sale of these resources.

A significant function of this sub-activity is the administration of trust funds for all 581 bands. In this context, the Branch is responsible for the receipt of all revenue and capital monies deriving from land and resource transactions. These funds are public monies for a special purpose (that is, designated as Indian monies for the use and benefit of bands) and are deposited in interest-bearing accounts in the Consolidated Revenue Fund (CRF). Revenue monies are primarily generated through land leasing transactions and also include interest earned from all band accounts in the CRF. Capital monies are mainly derived from non-renewable resource transactions (oil and gas, for example) and include funds obtained through the sale of lands. All capital and some revenue monies are expended on authorization of the Minister with the consent of the Band Council for the use and benefit or general progress and welfare of the band. In many cases revenue monies are also managed and expended by bands by permission of the Governor in Council and pursuant to the Indian Act.

Institutions and Treaty Management: A number of functions related to elections, appeals, bylaws, appointment of officials and treaty payments are grouped in this sub-activity. Electoral officers are appointed to oversee the conduct of elections for band councils every two years (except where councils are established by custom rather than the Indian Act). Electoral officers are also appointed for the conduct of referenda on such subjects as sale of reserve lands or the consumption of alcohol on reserves. Appeals concerning both elections and referenda are administered and determinations rendered by the Minister or delegated officials. Bands may also pass bylaws, subject to approval or disallowance by the Minister, for such matters as the licensing of businesses, the raising and expenditure of monies by the band through taxation, and the appointment of officials to conduct the business of council. Finally, the payment of monies and other treaty obligations such as the provision of ammunition are also administered under this sub-activity.

Litigation Support: Increasingly the Department's administration of the lands, resources, trust funds and estates of Indians and bands is being challenged in the courts. Challenges generally arise from past or present policies and from practices of other operational sub-activities of the Indian and Inuit Affairs Program. Litigation against the Crown by native peoples is also increasing as a result of the constitutional guarantee of aboriginal and treaty rights. The Litigation Support sub-activity is designed to provide support of a legal and research nature in responding to the rising incidence of litigation. Where the Branch or other operational activity itself is uncertain of the propriety of existing policy or practice, funds will be provided by Litigation Support for test cases to seek a judicial resolution.

M. 27

Performance Information/Resource Justification

The prime justification for the provision of resources lies in the requirement to meet the Government of Canada's statutory obligations to Indians. Resourcing is therefore a function of the number of bands and individual Indians for whom services must be provided and also of the number and value of the various types of trusts and services administered by the Activity.

The number of Indians is currently in the order of 332,000 distributed among 581 bands which vary in size from ten to more than 10,000 members. The number of changes in membership registration arising from such events as births, deaths, adoptions, and marriages is presently running at a rate of 40,000 per year.

While varying from year to year, trust fund balances managed by the Branch have been steadily increasing as illustrated in Figure 16. Currently annual receipts are approximately $800 million, with annual disbursements in the order of $300 million. Trust fund balances in 1985 will be in excess of $1,000 million.

Figure 16: Indian Trust Funds Administered by Reserves and Trusts

An increased incidence of litigation against the Crown has necessitated higher resourcing levels. Prior to 1970, the number of litigation cases against the Crown were few in number. Since 1970, some 100 cases have been brought and are currently before the courts, many seeking alleged damages in the multi-millions of dollars for breach of trust and other reasons. The large potential liability associated with current and future litigation necessitates an increase in skilled branch staff to deal with the complex work involved.

Program resources will be utilized to support several important initiatives planned for 1985-86. These include the continuing development of a computerized system for a land registry, a land transaction system, an election and bylaw registry system and a performance measurement system. Resources will also be used to implement a trust accounting system and a membership registry system.

In terms of overall responsibilities, the activity's proportion of staff to the number of Indians served has declined over the past several years (see Figure 17). This has occurred despite increasing complexity in the various types of transactions and despite the greater workloads resulting from growth in the value of trust funds.

Figure 17: Reserves and Trusts Staff per 10,000 Indians

M-29

B. Elementary/Secondary Education

Objective

To ensure that all eligible Indians and Inuit have access to a quality and range of elementary/secondary education that is relevant to the social, economic, and cultural needs and conditions of the individuals, bands, and communities being served.

Resource Summary

This activity accounts for 25.9% of the total Indian and Inuit Affairs Program expenditures and 36.2% of the person-years.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Instructional Services - Band Schools	59,883	-	58,580	-	48,031	-
Instructional Services - Provincial Schools	172,624	-	160,297	-	157,684	-
Instructional Services - Federal Schools	71,759	1,296	72,977	1,291	57,858	1,293
Student and Educational Support	85,878	296	84,526	293	82,416	295
	390,144	1,592	376,380	1,584	345,989	1,588

Costs shown above do not include the expenditures related to the operation and maintenance of capital facilities such as schools, student residences and teacher residences. Of total expenditures in this activity 15.8% relate to personnel costs and 79.5% to transfer payments.

Description

Elementary/Secondary Education derives its authority from sections 114 to 119 and 121 to 123, inclusive, of the Indian Act and by specific Orders in Council.

Through this activity the Department provides for or purchases a full range of educational services for approximately 77,400 elementary/ secondary Indian students residing on reserves or on Crown lands. These services are provided in one of three modes of delivery - federal, provincial and band operated schools - each of which is unique in its organizational structure.

Instructional services for all three delivery modes comprise all services related to the teaching-learning process and include the provision of teachers, administrative support to teachers, instructional supplies, paraprofessional staff and culture based programs such as cultural education, native language instruction and curriculum development.

Instructional Services Band Schools: Bands manage their own schools (191 schools) under contribution arrangements. The current trend within the Department is for more local control of elementary/secondary education with the goal of increasing the percentage of students enroled in band operated schools, which now stands at 21%.

Instructional Services - Provincial Schools: A large percentage of the Indian student population (51%) attend provincial schools under 600 joint tuition and capital agreements. Provincial schools operate under their respective provincial educational acts which, in some cases, can limit Indian influence in program content and delivery.

Instructional Services - Federal Schools: A third system of education is the federal school system, (169 schools) with the Department assuming the role normally ascribed to provincial ministries of education.

Student and Educational Support: To ensure that students receive the necessary support, the Department provides daily and seasonal transportation, living allowances for those students who must leave their homes to attend schools, guidance and counselling and, where necessary, group homes or student residences. Band boards and committees who help determine and develop Indian student curricula are also funded. Physical facilities for federal and band schools are provided through the Capital Facilities and Community Services Activity.

Performance Information/Resource Justification

The Indian Act specifies that Indian children who are living on reserves or Crown lands and who are from ages seven to 16 must attend school. Indians, age four to six and over 16, living on reserve, are also eligible to attend.

The provision of special services, such as special language instruction to promote cultural development results in additional costs over and above normal expenditures.

The growth of the Indian school-age population has been the prime reason for enrolment increases. The policy of local control has also contributed to higher enrolment and retention rates because the parents are more actively involved in their children's education.

A significant shift in student enrolment from federal and provincial schools to band schools has occurred as a result of the Department's efforts directed towards local control of Indian education.

Figure 19: Student Enrolment by Type of School

Performance information can be shown through a comparison of trends in Indian and national elementary/secondary education. In the future the Department will endeavour to develop standard achievement tests for assessing the academic progress of Indian and Inuit elementary and secondary school children.

Figure 20 shows the growth in the age-grade progression of the average 11 year-old Indian child. Normal progress is defined as a child who advances a grade for each year in school. Thus an 11 year-old or younger who is in Grade 5 meets or exceeds the norm. The figure illustrates that the percentage of students at or above the norm is increasing which in turn means the number of grade failures is continually decreasing.

Figure 20: Age-Grade Progression: Eleven-Year Old Students At or Above the Norm

% at or above the norm

Figure 21: Age-Grade Progression of Total Indian School Population

By making the curriculum more relevant, it is expected that the number of secondary school graduates will rise. Figure 22 shows the number of students in the graduation year for the last five years.

Figure 22: Number of Secondary School Students in their Graduation Year

Figure 23: Elementary/Secondary School Enrolment

The decrease in the last few years is due to the federal government's policy of clarification and change in funding off-reserve students in general and the elimination of funding off-reserve urban students for their books and supplies. The decrease shown between 1980-81 to 1982-83 does not necessarily mean that approximately 5,000 students ceased attending school. It means that the Department discontinued funding all off-reserve students thereby striking them from the departmental data collection process.

C. Post-Secondary Education

Objective

To encourage and support the educational and/or career development opportunities of Indians and Inuit through post-secondary education.

Resource Summary

This activity accounts for 3.9% of the total Indian and Inuit Affairs Program expenditures and 0.4% of the person-years.

Figure 24: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
University and Professional	53,016	17	46,917	17	43,055	17
University/ College Entrance Preparation (UCEP)	6,153	-	3,565	-	-	-
	59,169	17	50,482	17	43,055	17

As the UCEP program was established late in 1984-85 regions will not be able to make use of all of their UCEP allocations. This will be reflected in 1985-86 projections which are expected to be revised upwards when the UCEP program is established in all regions.

Of total expenditures in this activity, 1.2% are related to personnel costs 11.1% to professional and special services and 84.7% to transfer payments.

Description

This activity ensures that eligible Indians and Inuit have access to programs of financial assistance and instructional support services to participate in post-secondary education. It also endeavours to increase the number of Indian and Inuit students taking post-secondary studies so that the proportion of Indians attending post-secondary institutions and completing post-secondary courses of study, approaches the national proportion.

Educational and personal counselling services are available to all students enrolled in institutions of higher learning. These services may be provided by regular or contracted employees of bands or the Department.

University and Professional: Indians and Inuit who have been accepted by post-secondary institutions such as accredited universities, colleges, and CEGEP (Québec) qualify for financial support covering the cost of tuition, tutorial assistance, books and supplies, transportation, living allowances and child care expenses for students with dependants. Special incentives such as grants to individuals in the amounts of $750 for a masters degree and $1,500 for a doctorate are also provided to post-graduate students.

The Department also promotes, through special tuition arrangements with post-secondary institutions, the development of special programs to meet the needs of Indian and Inuit students and then communities; examples are special teacher training, pre-law courses, and social work education.

University/College Entrance Preparation Program (UCEP): A recent addition to the Post-Secondary Education Activity is the University/College Entrance Preparation Program. The program enables Indian and Inuit students to qualify for entrance to regular university and college programs through attendance in a one year preparation program. The impact will be an annual addition of approximately three hundred students in regular university and professional studies.

Performance Information/Resource Justification

The criteria for student eligibility under the terms of the post-secondary program include the following: the applicant must be a registered Canadian Indian or Inuit and resident of Canada at time of application and he/she has to have been accepted for registration by a accredited university, community college, CEGEP, technical institute, school of nursing, teachers college, etc., into courses which have secondary school graduation as a normal prerequisite to registration; students who are accepted as "mature" applicants are also eligible for support. UCEP students must be aged 20 years or older and have a completed Grade XI standing.

The Post-Secondary Education Activity is projecting increasing enrolments and increasing unit costs. The unit cost is the aggregation of the costs of tuition services and student allowances. This cost is largely influenced by the tuition fees set by the institutions and by increases in the cost of living. Since the mid 1970's annual expenditures have increased six-fold while enrolment has grown from 2,500 to over 7,000 in 1984-85. In this same period, average annual per student costs have more than doubled and now approximate just under $7,000.

The rate of participation in post-secondary education for the 18 to 24 age group of Indians has increased from less than 1% to about 12% in the last 20 years. The current national average figure is about 20%.

The enrolment has been increasing because the eligible Indian population is growing and the number of high school graduates entering university is also increasing. This is mainly due to an increasing number of mature matriculants and the special programs made available to Indian post-secondary students.

Figure 25 illustrates the difference between Indian and national post-secondary education participation rates. Since 1965 the gap has been considerably narrowed.

Figure 25: Participation Rates for Post-Secondary Education Students

By introducing programs like the University/College Entrance Preparation Program it is expected that a greater number of students will enter regular university and professional training programs and thus increase the participation rate of Indians in post-secondary institutions. In absolute numbers, post-secondary Indian graduates are increasing and the current rate is about 400 annually.

The Departmental Evaluation Branch will be studying the post-secondary education activity and the findings will be reported in subsequent expenditure plans.

Figure 26: Post-Secondary School Enrolment

D. Social Assistance

Objective

To provide eligible Indian and Inuit individuals who are in need with assistance and welfare services in accordance with government standards.

Resource Summary

This activity accounts for 16.3% of the total Indian and Inuit Affairs Program expenditures and 2.7% of the person-years.

Figure 27: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Basic Needs	220,475	-	214,708	-	195,371	-
Special Needs	6,847	-	7,076	-	5,407	-
Social Assistance Service Delivery	17,351	119	16,189	118	17,946	119
	244,673	119	237,973	118	218,724	119

Of total expenditures in this activity 1.8% relate to personnel costs 6.4% to professional and special services and 91.3% to transfer payments.

Description

Social Assistance provides funds and services to Indian individuals and families and certain categories of non-Indian individuals and heads of families who are in need as determined by a needs-test and who do not meet residency requirements for assistance off-reserves and Crown lands. This activity enables the individual and their dependents to maintain health, safety, dignity, and family unity.

Basic Needs: Single persons or heads of families who are in need because of lack of employment or unemployability and meet residence requirements qualify for assistance in cash or in kind to meet the basic requirements of food, clothing, shelter, household supplies and personal needs.

Counselling, referral and social casework techniques are utilized by departmental and band workers to motivate and enable social assistance recipients to achieve independence and self-sufficiency. Recipients are encouraged and supported in utilizing the services of other departmental (e.g., education and economic development programs) and non-departmental programs to acquire education and skills in order to avail themselves of employment opportunities to overcome dependency. Under the Work Opportunities Program (WOP), basic needs entitlements may be used to fund band-operated projects for the employment of people who would otherwise be dependent on social assistance.

Another component of Social Assistance is the Child Out of Parental Home Program (COPH). An allowance may be issued under specified conditions for the maintenance of a child by members of the extended family or other persons in the community when the natural parents are unable to provide care or payment for the child's support. In 1983-84, approximately $3,654,700 was expended on this type of assistance.

Special Needs: Special need allowances are provided to secure the well-being and safety of an individual or family who are eligible for basic allowances. Special needs are those goods or services such as: travel and transportation, burials, repair or replacement of household furnishings and appliances, and some funds for the replacement of items such as clothing and furniture lost by fire or other disaster.

Social Assistance Service Delivery: Services within this sub-activity include counselling, maintenance and recovery, eg., overpayments, eligibility testing to determine needs, administrative review and appeals by a client of his/her needs assessment, as well as the development and administration of formal and informal agreements with municipal, territorial and provincial governments for the reimbursement of services provided to Indian people.

Indian bands manage this Activity under contribution arrangements. It is estimated that more than 80% of the Indian population is served by band-administered social programs.

Where a band manages the social program or service, basic administration costs are borne by the Band Management Activity, while activity-specific costs are assumed by Social Assistance.

Performance Information/Resource Justification

Entitlement to financial assistance under Basic Needs is determined by application of general eligibility criteria such as status, residency and a needs test which measures the budgetary requirements of the applicant relative to the resources available to him/her and dependents. If all conditions are met and it is shown there is a deficit between needs and resources, the applicant is deemed eligible and issued assistance in an amount equal to the deficit.

Total number of case-months* of basic needs assistance, excluding Children Out of Parental Home, was 504,034 in 1983-84, which breaks down into 236,896 case-months of assistance to unemployable recipients and 267,138 case-months to employables. The average cost per case-month of assistance is approximately $384.18. Figure 28 illustrates the trend in the provision of basic needs over the last three years.

Figure 28: Basic Needs Case-months (by Type)

	1983-84	1982-83	1981-82
Employables	267,138	255,277	230,921
Unemployables	236,896	226,378	204,779
Total case months	504,034	481,655	435,700

In the Child Out of Parental Home category there were 20,966 case-months of assistance, or a monthly average of about 1,747 children being supported by the program. This averages out to approximately $174.32 per case-month in 1983-84.

Special Needs requests must meet eligibility criteria established by Activity management. Special Needs expenditures in 1983-84 were $7,227,000.

A significant contribution is made by the activity to the improvement of local employment levels, the development of skills and the creation of additional community goods and services, by the use of social assistance funds for employment projects operated under band auspices. The entitlement of eligible individuals and heads of families may be transferred to projects that are designed to use these funds for the creation of new jobs in the community. It is estimated that in 1983-84 approximately 31,200 person-months of employment were

* The costing unit for Social Assistance is a monthly case unit which is defined as the cost of assistance issued to an individual or head of a household for a full calendar month. A monthly case unit could be a mix of individual and or family beneficiaries for all or a portion of a calendar month.

directly created by the use of Social Assistance funds, under the Work Opportunities Program and the New Employment Expansion and Development program, a time-limited initiative that operated from April, 1983 to June, 1984. This high level of activity is expected to continue in 1985-86 under the Work Opportunity Program and the new Indian Summer Youth Employment and Canada Works Programs.

E. Welfare Services

Objective

To ensure that Indian and Inuit individuals, who are in need of care and protection from neglect and mistreatment, or assistance in coping with personal or situational problems, have access to welfare services in accordance with government approved standards.

Resource Summary

This activity accounts for 4.3% of the total Indian and Inuit Affairs Program expenditures and 0.1% of the person-years.

Figure 29: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Child Welfare Services	44,637	-	45,279	-	40,405	-
Adult Care	6,759	-	6,534	-	7,466	-
Individual and Family Care Services	12,854	1	11,259	1	7,724	1
	64,250	1	63,072	1	55,595	1

Of the total expenditures in this activity 0.1% relate to personnel costs 6.4% relate to professional and special services and 89.2% to transfer payments.

Description

This activity funds and in certain instances also provides a broad range of services intended to nurture and protect children, individuals or families living on reserves. Services and assistance are provided through agreements or arrangements with different levels of governments as well as voluntary and private service organizations.

The Welfare Services Activity is organized into three sub-activities.

Child Welfare Services: This sub-activity provides funding and ensures that agreements with the provinces for the care of abused and neglected Indian and Inuit children with reserve residency are delivered in accordance with terms and conditions prescribed by activity management. This sub-activity also provides for bilateral and tripartite agreements between the federal government, provincial governments and Indian bands for the delivery of Child Welfare services on-reserve. Services include the provision of institutional care, the selection of families for foster care and payment of maintenance, the selection of group homes, along with the placement and maintenance of individuals and other services such as counselling.

Adult Care: Adult Care funds assistance and services to eligible Indian adults who are incapacitated because of age or disability, with the purpose of enabling them to maintain a satisfactory level of physical and mental functioning and independence. The range of services provided include: institutional care for those adults who require constant supervision or assistance; foster care to adults who require some assistance with their daily activities but at a level less than in an institutional setting; and in-home care which supports maximum independence for persons who require some assistance with daily living by providing services such as homemakers and meals for adults in their own homes. Not included are the services and cost for intermediate nursing home care for incapacitated adults.

Individual and Family Care Services: This sub-activity provides non-statutory services to Indian families, or individuals not covered under specific legislation or agreements with provinces. These services include counselling to individual adults and families, the placement and supervision of children with parental consent, the recruitment, selection and supervision of foster homes, intermediate care for incapacitated adults and other placement resources in Indian communities.

Performance Information/Resource Justification

The main goal of the Welfare Services Activity is to ensure that eligible Indian and Inuit children, families or individuals on reserve receive personal, family or community welfare services relevant to their unique circumstances and in accordance with applicable provincial and territorial legislation.

Of the three sub-activities, Child Welfare Services accounts for approximately 70% of the expenditures, Adult Care accounts for 10% and Individual and Family Care Services constitutes the remaining 20%.

Child Welfare Services are provided or made available to Indian children, families or individuals who live on reserve and require services as prescribed under provincial legislation and agreements. This includes children in need of protection from abuse and neglect.

The universal criteria for eligibility to Adult Care include:

- Indian adults who are resident on a reserve, or in the case of transfer from an acute treatment hospital, were resident on-reserve immediately prior to admission to the hospital; and

- Indians on-reserve over the age of 18 years who, because of age, physical or other disability as indicated by medical or psychological assessment, require some assistance with daily living but do not require institutional care and who are unable to meet the cost of these services.

A dual assessment is carried out to determine both an individual's need for care, the level of care and individual's ability to pay for all or part of the costs normally attributable to the recipient of the care.

Individual and Family Care Services are provided to on-reserve Indian and non-Indian families requiring assistance, who seek services or accept referral for service provided under no specific legislation or agreement with the province. Included in this sub-activity are Indian children who are placed with parental consent and intermediate adult care services in institutions.

The level of resources required to ensure access to welfare services depends on the number of days of care required for eligible individuals and the per diem rates established by provinces and child welfare organizations. Some provincial services are currently not being provided to the Indian population due to some provinces viewing Indians on-reserve as a federal responsibility and also some bands do not recognize provincial responsibility for welfare services.

National Indian unit costs for 1983-84, (the cost of providing care for one child/adult for one day) of child welfare and adult care services are $28.96 and $31.40 respectively.

Bands are striving to reduce the number of Indian children who are placed in provincial care by participating in the design, delivery and control of child welfare services on-reserve through tripartite or bilateral agreements. Figure 30 shows the number of master agreements the Department has entered into over the past three years. The increasing number of agreements generally indicates that more and better services are gradually being provided to the Indian population.

Figure 30: Number of Master Child Welfare Agreements

The change in the proportion of bands administering Child Welfare Services is an important performance indicator in measuring the degree of success the Department is having in meeting its overall goal of Indian control of their own affairs. Figure 31 shows that an increasing proportion of bands are operating Child Welfare Services, a trend which serves to enhance the quality of the services provided.

Figure 31: Number of Bands Covered by Master Child Welfare and Subsidiary Agreements

The Adult Care component of this activity ensures that the level of service provided to aged and disabled Indian individuals is satisfactory. Figure 32 shows the number of day of care provided over the last three years by type.

Figure 32: Number of Days Care* Provided to Adults by Type

	1983-84	1982-83	1981-82
In-Home	176,153	125,204	105,740
Foster	5,819	4,893	954
Institutional	162,993	141,022	119,993
	344,965	271,119	226,687

*Days Care - Represents one individual in care for one day.

F. Other Education and Social Services

Objective

To support the Indian and Inuit people in preserving, developing and expressing their cultural heritage and in developing a level of community social and cultural services that respond to their needs.

Resource Summary

This activity accounts for 0.8% of the total Indian and Inuit Affairs Program expenditures and 0.2% of the person-years.

Figure 33: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Cultural/Educational Centres Program	7,472	3	7,355	3	7,353	3
Cultural Development	584	4	544	4	566	4
Community Social Services	3,815	3	3,807	3	3,663	3
	11,871	10	11,706	10	11,582	10

Of the total expenditures in this activity 3.6% relate to personnel costs and 90.5% to transfer payments.

Description

Cultural/Educational Centres Program: This sub-activity provides direct financial and other supportive assistance to Indian bands, tribal/district councils and Indian/Inuit non-profit corporations to allow them to establish and operate individual cultural/educational centres.

The Cultural/Educational Centres program, approved by Cabinet in 1971, was created to assist native people in developing their own educational initiatives based in their cultures. Under the Centres program, Indian and Inuit people plan, develop, manage and deliver programs designed to fill need defined by themselves and in accordance with their own priorities.

The programs, projects and services of centres generally address one or more of the following categories of activities: revival of traditional skills, cultural research, language research and instruction, curriculum development, native cultural teacher training, cross cultural awareness training, and resource and communications services to both Indian and non-Indian communities.

Cultural Development: This sub-activity has two main thrusts, Cultural grants and Indian art services.

Cultural grants are designed to assist individual Inuit and status Indian artists, painters, writers, musicians, and dancers to further their own careers and to acquaint the general public with work in the field of contemporary native art.

Cultural grants are provided for projects in the following categories: art projects that are national in scope and which involve two or more provinces or serve to enhance the international image of Canadian Indian people; projects proposed by individual artists in painting, sculpture, theatre, literature, film, music and dancing; projects demonstrating unique and innovative methods of cultural expression; research projects which relate directly to the arts or cultural development; and repatriation projects in Indian museums which hold benefits for talented and innovative Indian artists.

Indian art services include responsibility for the preservation, conservation, development and promotion of the Department's 2,000 fine and decorative works of art. By maintaining files on more than 250 Indian artists, the Indian Art Centre responds to requests from art researchers, curators and art historians seeking biographical information, press clippings and releases, and slides and photographs of art works.

In addition, the Indian Art Centre located at headquarters in Ottawa, provides recommendations and resource materials for the marketing and promotion of art through national arts and crafts public shows and international exhibits.

Community Social Services: This sub-activity provides advice and guidance to band councils, their staff and community services organizations in assessing community needs for establishing drop-in centres, homemakers services and day-care centres. Upon establishment of a need, advice is provided on how to plan, budget and operate the services and centres.

Funding for the operation and maintenance of day care and drop-in centres is made though contributions to band councils. For the homemaker services, funds are allotted to bands who demonstrate a need for the services and an ability to deliver them. The funds are used to train band staff and establish homemakers programs.

A small component of this sub-activity is adult rehabilitation. Funds are provided to band/district councils so that some counselling services can be given. Financial reimbursements are made to provincial or other rehabilitation agencies that assist Indian people with assessments of skills and ability, and the development of comprehensive rehabilitation plans and special programs for the handicapped. The Department participates with Health and Welfare Canada in a joint sponsorship of projects designed and operated by Indian and Inuit people and which are directed at the prevention and treatment of problems of alcohol and drug abuse. Funding and administration are the responsibilities of Health and Welfare Canada. The Department participates through membership on regional and national advisory boards.

Performance Information/Resource Justification

The 64 Cultural/Educational centres will develop and offer programs and services to approximately 342 Indian bands which represent 225,880 or 68% of status Indian people in Canada and to 100% of the Inuit population of northern Quebec. The growth of Cultural/Education Centres is shown in Figure 34.

Figure 34: Growth of Cultural/Educational Centres

The Indian Art Centre is primarily concerned with the conservation, cataloguing and promotion of Indian Art. As a result, approximately 80% of the Centre's expenditures are associated with these endeavours. By mounting an Indian art exhibition for Expo '86 and providing a touring exhibition to two additional major Canadian centres, and by assisting in the coordination of three arts and crafts public shows in Calgary, Edmonton and Ottawa, with the National Indian Arts and Crafts Corporation, the Indian Art Centre will assume a larger responsibility for developing the Indian art market and

audience awareness. Professional staff applying a museological standards approach to the management of all visual and written documentation, will provide a more critical and detailed analysis of the reference materials by art curators and historians. An anticipated 30% expansion of the reference files will include details on an additional 80 prominent and promising new artists.

By producing and disseminating a quarterly newsletter (first issue scheduled for Fall '84) the Indian Art Centre will provide to a professional art audience information on individual artists and current trends in Indian art in Canada.

For the past few years requests by bands for Community Social Services has risen in order to meet an increased demand by the Indian people. This trend is expected to continue in 1985-86. The Department presently funds 39 day care centres and six drop-in centres.

G. Economic Development

Objective

To facilitate and support Indian bands and Inuit communities in their efforts to obtain a greater degree of economic independence, and develop a viable economic and employment base.

Resource Summary

This activity accounts for 3.7% of the total Indian and Inuit Affairs Program expenditures and 4.3% of the person-years.

Figure 35: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Business Development	13,200	107	13,927	106	17,425	107
Employment Development	9,621	29	28,387	29	29,720	29
Employability Development	9,487	18	9,845	18	13,529	18
Community Development Support	24,097	35	27,165	35	16,654	35
	56,405	189	79,324	188	77,328	189

Of total expenditures in this activity 15.5% relate to personnel costs and 79.8% to transfer payments.

Description

In general, economic development on Indian reserves and in Inuit communities seriously lags most other Canadian communities in similar circumstances. This activity develops and supports projects and programs that address substantial and growing unemployment, undeveloped resources and continued dependency. Indian leaders in both the First Ministers' Conference and the Special Committee on Indian Self-Government have stressed the importance of economic development to underpin whatever self-governing responsibilities are achieved. The Economic Development Activity, in fulfilling its mandate, provides advice, assistance, funds and training through the following four sub-activities.

Business Development: This sub-activity is designed to assist Indian and Inuit individuals, bands, communities and organizations to have the opportunity as entrepreneurs to establish, maintain and expand viable businesses which will contribute to wealth creation, the enhancement of employment opportunities and economic independence. Loans for these businesses are provided through the Indian Economic Development Fund and the Federal Eskimo Loan Fund. In addition, advisory services and contributions are provided.

Employment Development: This sub-activity is designed to increase employment in Indian and Inuit communities and to improve the employment experience of the labour force. Its overall emphasis is centered on community based projects. Employment Development also identifies and develops services which assist Indian and Inuit people to obtain direct employment through existing federal and provincial employment related programs. Supplementary programs are provided where federal and provincial initiatives do not adequately meet the needs of this client group.

Employability Development: In conjunction with Employment and Immigration Canada (EIC) and Indian and Inuit organizations, this sub-activity assists in the identification of needs and coordinates and/or delivers training programs complementary to EIC. These programs are designed to provide Indian and Inuit people with the requisite skills for the local and national labour markets. They prepare Indian and Inuit people for employment both on-and off-reserve, and provide the communities with a supply of trained labour to support emerging business and local government employment initiatives. The main thrusts of Employability Development are in the areas of training on the job, occupational skills training (both academic upgrading and vocational training) and mobility assistance.

Community Development Support: This sub-activity assists Indians and Inuit in acquiring planning frameworks that will increase their capacity to plan for the economic development of their human and other resources. Funding is provided to bands and tribal councils so they may acquire information and technical advice on environmental and socio-economic impacts of resource development on-and off-reserve. Community Development Support also funds Indian and Inuit controlled financial and development institutions. These institutions provide funding to Indian and Inuit contractors, facilitate equity investments and long term financing and offer counsel in securing and managing investment funds.

Performance Information/Resource Justification

The Economic Development Activity must take into account the fact that the employment success rate among Indians and Inuit has characteristically been at a level of approximately 25% of the working

age population while the national average is 57%*. Contributing factors are isolated location, low educational and skills levels, lack of mobility, lack of economic opportunity, and lack of capital.

Business Development: Resources are allocated to projects based on individual business plans, which normally include the following: historical and pro-forma financial statements, technical feasibility, market analysis and sales plan, social profitability analysis, assessment of management, maximum loan amounts and repayment schedules, and an indication of the number of jobs to be created. These business plans are reviewed and priorized against an established set of investment proposal criteria for business direct loans, loan guarantees and contributions.

This sub-activity, within present funding levels, responds to 25% of the demand for new businesses. It provides services to enable approximately 250 new Indian and Inuit businesses to become established per year and to enable approximately 500 Indian and Inuit businesses to maintain or expand operations. During 1985-86 technical advice will be provided to 1,500 projects and 12 to 15 major workshops (350 participants) will be held on business related subjects.

The new businesses are expected to create 7,800 months of employment for new enterprises while approximately 13,800 months of employment will be maintained for those ongoing business operations.

Figures 36 and 37 present the number and type of loans and contributions, over a five year period, in support of existing and new businesses in both the Indian Economic Development Fund (IEDF) and the Federal Eskimo Loan Fund, (FELF).

Figure 36: Number, Type and Amounts of the Indian Economic Development Fund ($ Millions)

	Direct Loans		Loan Guarantees		Contributions	
	#	$	#	$	#	$
1983-84	188	$4.6	90	$ 2.7	532	$13.0
1982-83	175	$2.9	70	$ 1.6	785	$16.9
1981-82	281	$5.2	84	$ 1.8	865	$16.2
1980-81	332	$6.0	31	$ 3.4	705	$14.1
1979-80	258	$3.4	34	$11.1	663	$ 9.4

* 1981 Statistic Canada, MSERD, CEIC and DIAND reports.

Figure 37: Number, Type and Amounts of the Federal Eskimo Loan Fund

	Direct Loans		Loan Guarantees		Contributions	
	#	$	#	$	#	$
1983-84	7	$0.1	1	$ 2.6	10	$ 0.1
1982-83	8	$0.3	1	$ 2.5	10	$ 0.2
1981-82	7	$0.1	1	$ 2.5	9	$ 0.1
1980-81	6	$0.3	1	$ 2.4	6	$ 0.1
1979-80	7	$0.1	1	$ 2.4	29	$ 0.2

These direct loans, loan guarantees (which are loans of last resort) and contributions are provided for the purposes of economic development of Indians and Inuit, individuals and groups, bands, communities, partnerships or corporations. Currently, the amount of direct loans which may be outstanding at any one time for the IEDF must not exceed $70 million; claims paid resulting from guarantees issued cannot exceed $30 million. For the FELF it must not exceed $2.0 million in direct loans and $3.0 million in guarantees.

Direct loans carry fixed interest rates based on the quarterly average prime rates of the commercial banks plus 1 to 3%, in effect at the time the direct loan is approved for the IEDF. An additional 1% is applied for the FELF. The interest rates in effect at the close of fiscal year 1983-84 were 12% on the first $75,000 and 14% on the remaining amount. As of March 31, 1983 there were approximately 3,309 direct loans outstanding amounting to $45.0 million. During fiscal year 1983-84 195 direct loans were approved amounting to $4.7 million. During the same fiscal period, the rate of recovery was approximately $4.7 million representing principal credited back to the account and $2.4 million representing interest paid to the Government of Canada in respect of direct loans outstanding.

As of March 31, 1983 there were approximately 157 guaranteed loans outstanding amounting to $5.5 million. During fiscal year 1983-84 91 loans were guaranteed amounting $5.3 million. By March 31, 1984 there were 165 guaranteed loans outstanding in the amount of $5.6 million. During fiscal year 1983-84 claims in the amount of $0.4 million were paid out in respect of guarantees outstanding.

The loan programs are recorded in the Public Accounts of Canada as loans, investments and advances and are financed through non-budgetary appropriations. The IEDF will be studied by the Evaluation Branch during 1985-86.

Employment Development: Requests submitted by Indian and Inuit associations, on behalf of bands and communities, must form part of the strategic approach to community economic development and either provide community members with work experience or act as a catalyst to further economic and community development.

Employment Development is currently administering the following three programs under the CEIC Federal stream programs for fiscal year 1984-85:

- the Department's Native Employment and Economic Development (NEED) program 1983-84 - 1984-85 totalling 21.8 million ($3.0 million 1984-85). This program was recently extended beyond June 30, 1984 and is now scheduled to be terminated by March 31st, 1985, on a project by project basis.

- the Department's Employment Initiative Program ($7.5 million); and

- the Indian Summer Canada Program ($8.0 million).

While these programs are only short term in nature, it is estimated that a total of 73,470 work weeks and 3,194 jobs will be created, on the basis that one job is equal to 23 weeks of work.

Employability Development: Resources are used to enhance employment skills of Indians and Inuit only where CEIC programs are either unavailable or inappropriate to their requirements. Services under Employability Development are aimed primarily at persons who have little or no job skills or experience, or who cannot obtain suitable employment where they are now living.

This sub-activity provides services to enable approximately 4,000 Indians and Inuit to be job ready for the labour market, of whom four out of 10 are expected to find employment. Components of this sub-activity are forecasted to be 231,362 training/days of occupational skills training; 51,900 training/days of training-on-the-job and mobility assistance for 790 persons.

Community Development Support: Funds in this sub-activity are made available through contribution arrangements which specify actual performance targets in the areas of resource development and institutional development.

There are at present 88 resource development projects active which can or may impact on 148 Indian and Inuit communities.

This sub-activity funds Indian and Inuit bands/communities to plan and organize in order to take advantage of or mitigate the impacts of developments in mining, hydro-electric power, irrigation projects, hydrocarbon production and transportation. The most outstanding example to date of an Indian band taking advantage of timely resource development impact funding to prepare a negotiating position occurred in the fall of 1983 when the Lax Kw'alaam Band concluded a major agreement with Dome Petroleum. In return for agreeing not to use their land claim to interfere with the construction and operation of Dome's proposed $1.7 billion Liquified Natural Gas Terminal, the band negotiated the following benefits:

- cash payment that could total $39.1M;
- capital contributions of $3.5M;
- a half share in a tugboat company with an option to purchase the entire company at a later date;
- employment and training to have 26 band members employed in the plant;
- protection of the Band's fishery;
- natural gas service for their community;
- protection for construction impacts and an effective monitoring committee.

Other examples of bands effectively using resource development impacts (RDI) funds include employment opportunities which Indian bands in Northwestern Ontario have been able to negotiate during 1983-84 with gold mine companies including transportation assistance to and from the communities. As well, in the Tarsands area of Alberta, local bands have recently (June 1984) formed their own heavy construction company and secured major long term contracts with Suncor and Syncrude to clear overburden. The initial organizing and planning work was financed with resource development impact contributions. In addition to benefiting Indian communities, resource development impacts funding also benefits resource developers and contributes to the security of proposed major resource developments as it enables Indian bands to enter into effective dialogue and negotiations leading to settlement rather than only having recourse to resorting to negative court actions or the use of land claims to protect their interests.

Community Development Support is also provided to Indian people in the form of contributions and technical advice to support their involvement in the traditional pursuits of fishing, wild fur harvesting, wild rice production and harvesting. Further support is being provided to develop economic opportunities that exist in other renewable resource sectors to which Indian people have easy access such as forestry, mariculture, tourism and outfitting.

Community Development Support, in addition provides services to enable new Indian and Inuit institutions to be established and to maintain the operations of 41 such organizations. Examples of such institutions are the National Indian Arts and Crafts Corporation (NIACC) which was created in 1975 to promote and enhance a self-supporting native arts and crafts industry in Canada, and the Saskatchewan Indian Agricultural Program.

NIACC has a national office in Ottawa and has 13 regional corporations. The national office coordinates, manages and provides native arts and crafts development on a national, unified basis. The role of the regional corporations, while similar to the national office, includes development support through financial and technical assistance. Presently, the Department provides $3.36 million annually to the national office and these funds are allocated to the national and regional corporations based on approved operational plans.

A further example of an Indian economic institution, as mentioned above, is the Saskatchewan Indian Agriculture Program (SIAP), which is a corporation established to develop successful agricultural operations on Indian reserves in the province. It is governed by an independent board consisting largely of representatives of the Indian community. There are other agricultural operations in British Columbia, Alberta, Manitoba and Ontario which are in various stages of development.

Also of major importance are development corporations which, through their own initiatives, develop economic opportunities in many areas within their respective geographic locations. The Dakota Ojibway Tribal council, which has been successful in this area, operates within a Regional Economic and Employment Development core budget of approximately $130,000. They obtain resources from other funding agencies as well.

H. Band Management

Objective

To assist and facilitate Indian bands and Inuit communities and their organizations to develop and manage effective governments, to perform community-based development planning, and to promote the effective on-going consultation with, and participation in policy development by Indian and Inuit leaders.

Resource Summary

This activity accounts for 8.3% of the total Indian and Inuit Affairs Program expenditures and 4.1% of the person-years.

Figure 38: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

	124,190	180	121,733	179	117,604	180

Of total expenditures in this activity 5.9% relate to personnel costs 1.4% to professional and special services and 90.7% to transfer payments.

Description

Funding for Band Governments: This sub-activity provides support through contribution arrangements to band councils to perform their role as elected leaders in the community and, in most cases, to maintain an administrative capacity essential to the effective delivery of departmentally sponsored services. The responsibility of band councils includes the overall stewardship of band affairs, direction-setting for band council administration, representation of band positions to other governments and in general, the functions of a local government.

Consultation and Policy Development: Consultation funding enables Indians and Inuit to meet to discuss policy or program management issues with federal and other levels of government. Policy development funding is provided to Indian associations to support activities such as the preparation of position papers, development of proposals or provision of advisory or advocacy services, leading to the development of policies or programs related to Indian issues. Funds are provided through contribution arrangements.

Comprehensive Community-Based Planning: This sub-activity is concerned with the on-going process of determining future development orientation and conditions that will best meet the community's needs and aspirations and make optimum use of all its resources. It deals with the community as an entity and attempts to co-ordinate and integrate all aspects of community life. The term "comprehensive" indicates that the process focuses on all the aspects of community life that are seen as being important by community residents. The term "community-based" implies that community residents are encouraged to participate to the fullest. Indian leaders and in particular, Indian band councils must play a major role in CCBP, preferably being the initiative controllers, developers and implementers of the total planning process. Funds are provided to band councils and tribal councils (a council of elected members from 2 or more bands) through contribution arrangements.

Management Support and Service Delivery: This sub-activity supports Indian and Inuit groups in acquiring professional management personnel or administration assistance for a variety of program and related activities. These services are delivered by departmental staff through contributions to tribal councils who deliver the services to bands. As well, departmental staff advise and monitor in matters pertaining to contribution management and provide financial, administrative and management advice and assistance is also provided to bands, tribal councils and associations.

Indian/Inuit Management Development: This sub-activity provides resources and assistance to Indian bands and Inuit communities of Northern Quebec to assist them in acquiring the necessary skills and knowledge to manage their affairs in accordance with generally accepted management principles. It focuses directly on the development and delivery of management improvement activities specific to each band and community. Funds are provided, through contribution arrangements for such undertakings as orientation seminars for band councils, community awareness strategies, professional management consultation and the development and delivery of course programs and workshops. Ongoing advisory services are also provided through this sub-activity for issues requiring specific short term consultant services (such as Canadian Executive Services Overseas), to improve management practices and systems.

Performance Information/Resource Justification

In 1985-86, Band Management intends to achieve the following:

- develop and implement a data based funding formula for Tribal Council Funding, Consultation and Policy Development, Comprehensive Community-Based Planning and Management Support to bands;
- remove procedural restrictions to the effective and efficient transfer of contribution funds to bands;
- investigate and recommend alternative funding mechanisms such as grant funding, block funding and multi-year funding arrangements; and
- develop band management training needs assessment instruments for use by bands and to promote the use of such instruments.

Each band is eligible for services provided by this activity with the level of demand directly depending on such factors as: state of band development and the degree of local autonomy desired, number of bands and individuals, and size of Indian communities. The level of demand for services also varies in accordance with the development and implementation of band management development plans, which are intended to improve the management of the band's affairs, and which include managerial training of personnel, workshops for elected members and purchase of management advice.

As bands assume the responsibility for delivering specific departmentally funded services the level of resources required will be influenced by the administrative and management capacity of individual bands. Resources will be required for management training and development as well as financial and advisory services to enable those bands which do not have the managerial capacity to acquire skills and knowledge to deliver specific services.

Funding for Band Governments: The majority of resources in the Band Management Activity are within this sub-activity and are provided to bands and tribal councils. All bands receive funding, in varying degrees, under this sub-activity. Funding for the three thrusts of this sub-activity is shown in Figure 39.

Figure 39: Funding for Band Governments

	1985-86	1984-85	1983-84	1982-83
Band Governments	$79,848.5	$72,571.5	$74,332.0	$46,462.0
Tribal Councils	8,249.0	6,849.0	-	-
Band Employee Benefits	3,935.5	3,935.5	3,200.0	735.0
Total	$92,033.0	$83,356.0	$77,532.0	$47,197.0

Band Governments: All band councils are eligible to receive band support funding. This is a formula-based allocation which takes into account total band membership and location, population on reserve and the type and value of program services delivered. Also considered is the number of program specialists necessary to deliver departmentally-funded services who require space in the band office to discharge their duties.

Band councils may utilize the funds provided, including grants, to help meet the cost of band government operations. Grants are for allowances to elected officials and travel of elected officials on band business. Contributions are given for salary and travel for administrative staff, office supplies, utilities, rent and equipment, basic telephone costs, long distance telephone costs for council and administrative purposes, annual audit and other professional fees, and contributions towards tribal council expenses.

Tribal Councils: The Department provides support directly to a tribal council in situations where a number of bands have decided to form a tribal council for the purpose of delivering programs to reserve residents, delivering advisory services to the bands and their staff, or acting as advocates on local matters of common interest. An annual general development grant of $4,000 per band is available to all mandated and incorporated tribal councils. Those which have been mandated to deliver advisory services may be sponsored for up to five advisory positions for every six bands, and in remote areas for five positions for every four bands. In addition, where tribal councils deliver program and advisory services, a grant is available to help

defray the cost of executive management, i.e., meetings of the board of directors and general administrative support. Funding for administrative support is calculated on a formula basis taking into account the number of employees sponsored by the Department, the type and volume of programs delivered, and the location of the tribal council office.

Band Employee Benefits: The Department may make available to Indian employers a contribution equal to the employer's minimum cost to sponsor a range of employee benefits required, in most cases by law, i.e., Unemployment Insurance, Canada or Quebec Pension Plan, hospitalization and medicare premiums, and Workers Compensation. In addition, the Department will make available the employer's share of the cost of a pension plan where the benefits obtainable do not exceed those available from the basic plan sponsored by the government for federal employees.

Consultation and Policy Development: Funding is provided to Indian groups to cover the cost of travel for meetings and to provide a per diem honorarium for the purpose of consultative meetings. Such funding is provided to support meetings with individual bands, groups of bands, and associations. Policy Development provides funding to enable Indian representative associations to conduct research and to present their views on policy issues and accounts for approximately 60% of the funds provided through this sub-activity. Policy Development funding is provided, generally, to those groups which are recognized for core funding purposes by the Department of the Secretary of State. Core funding supports the costs of basic organization and operation.

Comprehensive Community-Based Planning: Funding is provided to bands and tribal councils to cover the costs of contracting planning consultants or hiring planners, and to cover other costs such as workshops, mapping and studies. Funding also supports departmental band planners and their various duties. The various types of Comprehensive Community-Based Planning endeavours are physical development planning, community planning, economic development planning, airphoto-mapping, record plan surveying, environmental planning and community development planning. Funding is provided to bands and tribal councils based on the community planning needs and the community's stage of development.

Management Support and Service Delivery: Funding is provided to bands and tribal councils based on the need for improving their management practices and systems. Funding is also used to purchase professional expertise in specific management endeavours for Indian organizations.

Indian/Inuit Management Development: All band governments and Inuit communities of Northern Quebec and Labrador are eligible to receive funds to pursue the management expertise they require. Funding assistance is provided to those groups based upon management development plans prepared by them. These plans identify the full extent of management development services that the band or Inuit community wishes to undertake and extend through several years. Funds are provided on a yearly basis based on a priorization of these needs.

In addition, funds are available to selected educational institutions to assist these institutions in defraying the cost of providing managerial programs and courses specifically adapted to the needs of Indian/Inuit people. The extent of funding available for this purpose is calculated on an individual basis in consultation with Indian representatives.

Figure 40: Percentage of Bands With Band Management Improvement Plans

Figure 41: Number of Denials/Qualified Audit Opinions

I. Capital Facilities and Community Services

Objective

To assist and support Indian bands, Inuit communities and individuals to establish and maintain a level and quality of community capital facilities, family living accommodation and policing consistent with approved policies and standards.

Resource Summary

This activity accounts for 28.8% of the total Indian and Inuit Affairs Program expenditures and 10.9% of the person-years.

Figure 42: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Community Capital Facilities:						
Infrastructure and Services						
Capital	119,187	-	117,824	-	122,605	-

Operating and Maintenance	35,500	116	30,354	116	30,561	116
Recreation	1,651	-	1,651	-	1,469	-
Housing						
Capital	97,695	-	98,478	-	130,025	-
Operating and Maintenance	4,204	25	3,662	25	3,077	25
Policing	14,611	-	14,100	-	12,794	-
	432,793	478	411,395	475	419,982	477

Of total expenditures in this activity 4.6% relate to personnel costs, 4.7% to professional and special services, 66.9% to transfer payments and 21.3% to departmentally delivered capital.

Description

Most Indian and Inuit communities, because of their geographical location and limited natural resources, do not have the economic capability of meeting the cost of essential capital facilities requirements. Therefore, funding by the Department is a critical source of support for the capital works program for these communities. The cost of providing on-reserve facilities is extremely high due to the isolation of many communities and their low settlement densities. These factors result in increased costs for transportation, skilled labour and materials.

This activity meets the needs of the client group through the following sub-activities:

Community Capital Facilities: This sub-activity provides support for the construction, operation and maintenance of community capital facilities, such as schools, water systems, sanitation, electrification, roads, community buildings, fire protection facilities, and special services such as flood and erosion control.

This sub-activity assists Indian and Inuit communities in obtaining physical infrastructure that meets recognized standards for education and for the protection of life, health and property. This is done by managing the implementation of capital projects, by funding band managed projects and by providing professional and technical expertise. Also included is the implementation of a Maintenance Management System for capital assets. Funds are also provided for on-reserve recreation programs.

Housing: The Special Committee on Indian Self-Government pointed out in November 1983 that housing conditions on reserves are still considerably worse than in non-Indian communities. According to the 1981 census of Canada, a dwelling is said to be crowded when it contains more than one person per room. Statistics from this survey indicate one in 43 non-Indian homes is crowded, but for Indian on-reserve homes the proportion is much higher: nearly one in three.

The Housing sub-activity provides support to individuals and bands in obtaining adequate housing by providing subsidies towards the construction and renovation of houses on-reserves as well as training, management and technical assistance to bands. This sub-activity thus endeavours to establish and maintain a level and quality of family living accommodation consistent with recognized national standards.

The sub-activity's goal with respect to on-reserve housing is to attain the construction and renovation targets of 2,400 new houses and 3,000 renovations annually, and to ensure that such housing is consistent with the standards of the National Building Code.

Policing: Policing provides direct and indirect support to approximately 355 communities, through two basic programs, in an effort to obtain effective on-reserve policing services. Bands have the option of using the Band Constable Program whereby Indian and Inuit individuals are selected by bands and trained by the appropriate provincial authorities to assume limited policing duties on-reserve. The Department can also negotiate policing arrangements with the provinces and territories, on a cost-shared basis, with the Indian Special Constable Program supplied through the RCMP Native Policing Branch, or in the case of Ontario, through the Ontario Provincial Police. In Quebec, where the province does not share in the cost of the program, the Amerindian Police Force provides policing services comparable to the Indian Special Constable Program. The Department also funds the Dakota Ojibway Tribal Council Police Program which is not required to go through the RCMP for the hiring of constables.

Performance Information/Resource Justification

Community Capital Facilities: The Department's capital expenditures are third in magnitude to only National Defence and Transport Canada. In 1985-86, the Department's capital budget will be in the order of $310 million (including housing). Current data indicate that the replacement cost of assets on-reserve across the country stands at approximately $2.8 billion (excluding housing). In order to ensure that the basic needs of Indian communities are addressed, the expenditure of funds focuses on the priority areas of health, safety and education. The allocation of the capital budget is further identified in Section III page 2-86.

Based on capital requirements identified through band capital plans, projects are priorized in line with available resources and in consultation with bands. Capital resource targets are issued annually to regions through a formula based on on-reserve population and regional and remoteness construction cost indices. The following are targets of this sub-activity:

- to commence implementation of revised level of service standards (1985-86);
- to continue development and implementation of Maintenance Management Systems at the reserve (community) level to cover 30% of asset value in 1985-86;

- to increase investment in the development of firm five year capital plans with full participation of bands during 1985-86 and 1986-87;

- to establish performance measures to accurately assess quality and quantity of capital works in meeting short and long term goals (1986-87); and

- to construct community infrastructure and education facilities to departmentally recognized service standards (1988-89).

The sub-activity level of service standards were developed in 1984-85 for water and sanitation systems, electrification, buildings, roads and bridges and school site development. These standards define the level of service the Indian and Inuit Affairs Program will provide and/or contribute to bands based on the objective of providing similar level of services as those in neighbouring non-Indian communities.

In line with the development of level of service standards, which will be used as the basis for measuring the quality aspect of performance measure for new assets, performance measures are being developed which will more appropriately reflect the adequacy or inadequacy of existing services. These measures will focus on services tied to houses and/or community facilities, schools, etc. Regions are reviewing the proposed approach and the final version will be ready for implementation in the 1985-86 operating year.

To prevent premature replacement of assets the Department has developed and is implementing a Maintenance Management System which will ensure adequate levels of maintenance and set standards of operation for capital assets. The Department also maintains a Capital Asset Inventory Data Base which provides an accurate count of capital assets by major facility category. This data base together with associated unit-cost and remoteness cost factors for operating and maintaining these assets enables the Program to establish funding requirements for each category of asset.

At present, approximately 20% of the total value of capital assets is being maintained in accordance with the Maintenance Management System. It is planned to increase this to approximately 30% over the next year.

Housing: Under the On-Reserve Housing Program, capital and operating and maintenance funding is provided to construct 2,400 new housing units and renovate another 3,000 units annually. Since April 1983 new houses are being inspected and built to National Building Code Standards thus ensuring a higher quality. At the same time, improvements are carried out to existing housing stock through the departmental renovation program in association with other federal government programs such as those provided through CMHC.

The subsidy per unit for new on-reserve houses consists of two components. The basic subsidy for urban areas is approximately $19,000 per unit to an average of approximately $30,000 for remote areas. A special freight allowance for houses constructed in special access areas is also included. Secondly, an economic subsidy, ranging up to $12,000 per unit, is allocated to reserves and settlements with low economic opportunity. Renovations are budgeted at $6,000 each. Funds are allocated to regions in proportion to on-reserve population and the average subsidy per unit applicable to each region. This latter figure, in turn, reflects variations in construction costs and economic subsidies.

A policy decision to address the housing backlog within 7 - 12 years was made "in principle" in 1982, and a one-time allocation of additional funding of $40 million to reduce the backlog by 800 units was made in 1983-84. However, the present level of funding is sufficient to provide housing for newly-formed families and to replace obsolete units. It is, however, not sufficient to reduce the outstanding housing backlog. Therefore, the requirement remains for increased housing capital and operating and maintenance funding to overcome the estimated backlog in 1984 to be approximately 10,000 new units and 11,000 renovations.

The performance of the Housing sub-activity can be illustrated by the number of houses built and renovated, the reduction in the outstanding number of houses needed and the percentage of new houses conforming to National Building Code Standards. By accessing various sources of funding, Indian Bands have exceeded the targets for new construction by 12% and for renovations by 29% in 1983-84. During 1985-86 a major evaluation of housing will be conducted by the Departmental Evaluation Branch. Findings will be reported in subsequent expenditure plans.

Figure 43: Changes in Housing Backlog

Policing: The demand for policing depends on such factors as the level of externally provided policing services, local crime rates, and the relevant importance placed upon on-reserve policing by the bands. Resource requirements are justified by a data base which identifies the policing services required by bands through the application of a unit cost by type of service for each band.

The allocation of resources for the Indian Special Constable Program is based on cost-sharing arrangements between the federal and provincial governments. In most instances these policing services are provided through the RCMP acting as a provincial police force. In such cases, the Department reimburses the RCMP for the total cost, and recovers the provincial share from the provinces. The only instance where a region becomes involved is in Ontario. The responsibility centre for policing in the Ontario region deals directly with the province in negotiating cost-sharing agreements and in making payments for policing services provided under the Indian Special Constable Programs by the Ontario Provincial Police.

The Band Constable Program, on the other hand, is funded entirely by the Department at a cost of $2.3 million. In this case, the constables are employees of the bands and funding is provided through a contribution arrangement. The amount of the contribution is based on the need for policing on Indian reserves as identified by the individual bands and approved by the Department.

The performance of this sub-activity can be represented by the annual increase in the number of Band Constables, and the number of communities receiving services under this sub-activity. This information is presented in Figures 44.

Figure 44: Number of Band Constables and Communities Served

	Constables	Communities
1981-82	518	341
1982-83	527	345
1983-84	547	355

The findings of a Departmental study conducted in 1983 were that the Indian policing programs are generally regarded as successful in reducing demands on regular law enforcement agencies, and are not more expensive than the costs of regular policing programs. Overall, the study suggested merit in the continued expansion and development of these programs.

J. Program Management

Objective

To provide for the effective management of the Program in the most cost-efficient manner.

Resource Summary

This activity accounts for 2.9% of the total Indian and Inuit Affairs Program expenditures and 17.0% of the person-years.

Figure 45: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Management	43,555	750	39,352	746	31,941	748
	43,555	750	39,352	746	31,941	748

Of the total expenditures in this activity 68.9% relate to personnel costs 9.9% to professional and special services and 11.8% to transportation and communications.

Description/Resource Justification

This activity includes line and functional management responsibilities of the Indian and Inuit Affairs Program at headquarters and regional and district office levels. These management responsibilities include policy development, coordination, planning, the management of actual service delivery to clients and the provision of direction and control.

The main goal of the Program Management Activity is to provide for the effective management of the Indian and Inuit Program in a manner that is consistent with the objectives of the Program and applicable sections of the Indian Act and related regulations, Cabinet decisions and Treasury Board authorities.

The basic indicator of performance is the change in the proportion of total program expenditures that is accounted for by the Program Management Activity. Figure 46 shows that in 1985-86 Program

Management will constitute 2.9% of the total expenditures of the Indian and Inuit Affairs Program. Figure 47 also shows that Program Management will constitute 17.0% of the total person-years of the Program. Statistics for previous years are unavailable because of the new program activity structure, but in future expenditure plans comparisons will be made.

Figure 46: Program Management Expenditures as a Percentage of Total Program

Figure 47: Program Management Person-Years as a Percentage of Total Program

K. Program Administration

Objective

To provide efficient and effective financial planning, accounting, personnel, communication and other regional management support in a manner that is responsive to client needs and to ministerial and Central Agency directions.

Resource Summary

This activity accounts for 3.0% of the total Indian and Inuit Affairs Program expenditures and 16.7% of the person-years.

Figure 48: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Administration	45,613	738	46,432	735	43,730	736
	45,613	738	46,432	735	43,730	736

Of the total expenditures in this activity 51.1% relate to salaries 16.4% to professional and special services and 15.9% to transportation and communications.

Description

The Program Administration Activity includes responsibilities related to the provision of advisory and management support services for the Program in the Department's regional operations. It includes services for finance and accounting, personnel, communications, and systems support functions.

Performance Information/Resource Justification

The Program Administration Activity is responsible for maintaining the level and quality of management support in the regions in the areas of finance, personnel, communications and general management support services and systems in order to facilitate the efficient and effective delivery of client services.

As new policies and procedures are introduced in areas such as finance and personnel the Indian and Inuit Affairs Program may have to adjust its Program Administration resource requirements. The consequence of workload variation may be marginal initially but over time substantive changes may occur as new policies and procedures are introduced. Likewise, as the government modifies its policies with respect to Indian and Inuit Affairs and the mandate of the Department, there will be an impact upon the number and types of services provided. This will also affect resource level requirements. The level of management support functions tend to vary in proportion to changes in the Program's responsibility (services to the client).

The basic indicator of performance is the change in the proportion of total program expenditures that is accounted for by the Program Administration Activity. Figure 49 shows that in 1985-86 Program Administration will constitute 3% of the total expenditures of the Indian and Inuit Affairs Program. Figure 50 also shows that Program Administration will constitute 16.7% of the total person-years of the Program. Statistics for previous years are unavilable because of the new program activity structure, but in future expenditure plans comparisons will be made.

Figure 49: Program Administration Expenditures as a Percentage of Total Program

Figure 50: Program Administration Person-Years as a Percentage of Total Program

Section III
Supplementary Information

A. Analysis by Object

The Indian and Inuit Affairs Program expenditures for 1985-86 are $1,505,054,000 and are presented in Figure 51.

1. Expenditures by Object

Figure 51: Expenditures by Object ($000)

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-year for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 54 outlines the allocation of the capital budget for the Program by type of asset.

Figure 54: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Administration	2,135	2,143	2,184
Housing	97,695	98,478	130,025
Community Infrastructures*	119,187	117,824	122,605
Education Facilities	87,069	75,265	59,324
	306,086	293,710	314,138

*Community infrastructure includes work on project such as roads and bridges, sanitation systems, water systems, electrification, community buildings and fire protection.

Contributions to Indians, their bands settlements, corporations or other legal entities for special employment initiatives	-	1,302	89

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Capital Facilities and Community Services			
Contributions to Indians and Inuit, their bands, settlements and corporations, provincial governments and other organizations to assist in the design, construction, maintenance and operation of community services, facilities and housing			
- Capital	208,293	209,594	243,643
- Maintenance and Operations	77,880	75,288	64,982
Contributions to the Province of Quebec for Inuit Housing under the James Bay and Northern Quebec Agreement	3,600	3,900	-
Band Management			
Contributions to Indian bands, tribal councils and Inuit settlements for administrative costs and management support services.	70,229	65,260	66,844
Contributions to Indian bands and Inuit settlements for local development planning	3,071	7,215	4,807

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions to Indian bands and associations for policy development and consultation	12,600	12,080	15,246
Contributions to Indian bands for employee benefit plans	3,935	3,200	-
Contribution to Indian bands for Programs on Indian Management and social paraprofessional training	2,573	4,270	-
Total Contributions	1,005,641	1,002,595	840,415
Total Grants and Contributions	1,112,256	1,102,738	923,505

Note that Actual figures for 1983-84 have been restated to reflect the new Activity Structure.

B. Cost Analysis

The Indian and Inuit Affairs Program's 1985-86 Estimates include only those expenditures to be charged to the department's voted appropriations and statutory payments. Other cost items as well as revenue must also be included when considering the actual costs to operate the Program.

Figure 57: Program Costs ($000)

	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Total 1984-85
Reserves and Trusts	32,391	9,823	42,214	38,695
Elementary/ Secondary Education	390,144	47,971	438,115	423,448
Post Secondary Education	59,169	512	59,681	49,325
Social Assistance	244,673	3,586	248,259	239,648
Welfare Services	64,250	30	64,280	62,025
Other Education and Social Services	11,871	301	12,172	11,970
Economic Development	56,405	5,695	62,100	84,768
Band Management	124,190	5,424	129,614	126,462
Capital Facilities and Community Services	432,793	14,403	447,196	418,596
Program Management	43,555	22,600	66,155	59,059
Program Administration	45,613	22,238	67,851	68,779
Total	1,505,054	132,583	1,637,637	1,582,775

The adjustments made to the estimated operating expenditures to arrive at a total cost include accommodation provided without charge by Public Works Canada, other services provided without charge by other departments and accommodation provided without charge by this Department.

C. Additional Information

2. Legislation

Indian and Inuit Affairs Program operates within a mandate which is derived from the Department of Indian Affairs and Northern Development Act and administers the following legislation:

Indian and Inuit Affairs:

The Alberta Natural Resources Act
The British Columbia Indian Reserves Mineral Resources Act
The Caughnawaga Indian Reserve Act
The Fort Nelson Indian Reserve Minerals Revenue Sharing Act
The Indian Act
The Indian Lands (Settlement of Differences) Act
The Indian Oil and Gas Act
The Indian (Soldier Settlement) Act
The James Bay and Northern Quebec Native Claims Settlement Act
The Lac Seul Conservation Act
The Lake of the Woods Control Board Act
The Manitoba Natural Resources Act
The Natural Resources Transfer (School Lands) Amendment
The New Brunswick Indian Reserves Agreement Act
The Nova Scotia Indian Reserves Agreement Act
The Public Lands Grants Act
The Railway Belt Act
The Railway Belt and Peace River Block Act
The Railway Belt Water Act
The St. Peters Indian Reserve Act
The St. Regis Indian Reservation Act
The Saskatchewan and Alberta Roads Act
The Saskatchewan Natural Resources Act
The Songhees Indian Reserve Act

Total Program	109,249,000	144,934,587	133,175,659

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During the Estimates year 1985-86, the Northern Affairs Program expects to achieve the following:

- to continue the definition of the roles and responsibilities of the federal and territorial governments, in the context of devolution of further responsibilities to territorial governments, and of the response within the NWT to the 1982 acceptance in principle of sub-division of the territory. (see page 3-21)

- to implement specific sub-agreements under the Yukon and Northwest Territories Economic Development Agreements and to develop sub-agreements under the Yukon Economic Development Agreement. (see page 3-35)

- to implement the Northern Oil and Gas Action Program (NOGAP) by federal departments and territorial governments. (see page 3-19)

- to review policies dealing with northern energy subsidies and the Northern Canada Power Commission. (see page 3-35)

- to implement initiatives to encourage exploration and mining development in the North. (see page 3-47)

- to review regulatory processes to clarify and streamline requirements for northern industrial development projects. (see page 3-34)

- to implement land use planning in each territory. (see page 3-42)

- to review renewable resources sectoral programs to foster an integrated approach to resources management. (see page 3-42)

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates* 1985-86	Forecast 1984-85	Change	For Details See Page
Northern Co-ordination and Social Development	27,974	35,413	(7,439)	3-23
Northern Economic Planning	6,555	16,866	(10,311)	3-31
Northern Environmental Protection and Renewable Resources	49,547	48,174	1,373	3-36
Northern Non-Renewable Resources	13,045	13,812	(767)	3-45
Northern Roads	18,267	23,249	(4,982)	3-50
Canada Oil and Gas Lands Administration	9,463	9,365	98	3-54
	124,851	146,879	(22,028)	
Authorized person-years	866	858	8	

*Note: This does not include a statutory item of $2,886,000 and 4 person-years for the Environmental Studies Revolving Fund.

The decrease of $22,028,000 or 15% in Estimates 1985-86 from Forecast 1984-85 results largely from termination of assistance to Cyprus Anvil Corporation ($11.2 m less $4 m which was reallocated from existing resources), the one time Special Recovery Capital Projects Program in 1984-85 ($9.1 m) and the transfer of the intraterritorial roads reconstruction program to the Government of the Northwest Territories ($3.6 m).

The 1984-85 Forecast exceeds 1984-85 Main Estimates by $8,028,964 or 5.8%. This increased forecast results from approved Supplementary Estimates of $8,028,964, of which $4,614,000 were resources for the Northern Oil and Gas Action Program.

Revenue is generated mainly through petroleum and mineral rights, royalties, rental fees, and the issuing of permits and interest on loans. This revenue is credited directly to the Consolidated Revenue Fund and is not available for use by the Program. Estimated receipts for 1985-86 are $6,721,000 (refer to Schedule of Revenues, page 3-76).

The Program's share of the resourcing of the Canada Oil and Gas Lands Administration (COGLA) accounts for 7.6% of the expenditures and 14.2% of the person-years. COGLA is accountable to the Deputy Minister of the Department for the use made of the Department's share of COGLA.

Figure 3: 1985-86 Distribution of Gross Expenditures by Object

B. Recent Performance

1. Highlights

Highlights of the Northern Affairs Program's performance during 1983-84, including work extending into 1984-85, are:

- The Northern Land Use Planning Program moved closer to implementation with the negotiation of agreements with officials of each territorial government on the principles and processes of land use planning. A formal Letter of Understanding was subsequently signed between Canada and the N.W.T. Government. Staffing in the N.W.T. has been completed.

- Work of an analytical and strategic nature continues in regard to a northern economic development strategy, resulting in a clearer, more focussed understanding of the northern economy, its prospects and constraints on its development. Such work has resulted in improved programming, such as providing a sound basis for the formulation and implementation of programs under Economic Development Agreements in each territory.

- A five year Canada/NWT Economic Development Agreement was signed in Yellowknife on December 12, 1982, cost shared on a 90% federal and 10% territorial basis. Programming is contained in three subsidiary agreements. Lead departments for subsidiary agreements and funding levels are as follows:

Human Resources Development	CEIC	$ 5,570,000
Domestic Market Development	DRIE	$10,570,000
Natural Resources Development	DIAND	$ 4,680,000
		$21,000,000

- A five year Canada/Yukon Economic Development Agreement valued at $13.2 million was signed in Whitehorse, on June 4, 1984. Programming is proposed in four separate subsidiary agreements.

- During February 1984, decisions were announced on the future of the Northern Canada Power Commission (NCPC), including phased relocation of NCPC headquarters to Yellowknife, regulation of the utility by a Panel, including northerners, of the National Energy Board, and extension of direct federal energy subsidy programs for northerners to March 31, 1985. Three specific programs are designed to bring energy costs outside the territorial capitals into line with those in Whitehorse and Yellowknife.

- Work on a northern mineral policy was delayed until late 1983, because staff attention was turned to the urgent resolution of pressing issues in northern mining caused by the sharp downturn in world metal markets, particularily the closure of the Yukon's Cyprus Anvil Mine. Work then commenced, on the preparation of background papers to correctly identify the issues, through widespread consultation, to be addressed in an overall policy.

- The oil and gas industry, now operating on 79 Exploration Agreements covering some 40 million hectares in the North, invested more than $770 million for exploration in 1983 (a 22% increase over 1981). A further $25 million was expended for development drilling. The Norman Wells Expansion Project was 80% completed and the Interprovincial Pipelines (IPL) Norman Wells pipeline project was on time and under budget at the end of 1983. Northerners were participating in the oil and gas industry in unprecedented numbers as more than 1300 Northerners were employed in the industry and 10% of the total investments (developmental and exploration) were for northern goods and services. Estimated oil and gas discovered reserves rose by 40% and 10% respectively over 1981. Two new joint venture drilling companies involving northern native interests in association with industry obtained intermediate term contracts. These joint ventures mark the first participation by native groups into a service field dominated largely by southern Canadian contractors.

- In 1983-84, 22 Canada Benefit Plans, associated with the re-negotiation of existing Exploration Agreements, were announced. The northern benefits components of these plans contained commitments on the part of industry to accommodate modern and traditional lifestyles and working conditions. Northern Benefits Committees were established to ensure effective regional input to the Canada Benefits process. Community Advisory Committees, or equivalent community-based organizations, sit on the Northern Benefits Committees when oil and gas activities in their area are being discussed. In addition, the Program reviews all major development project proposals to ensure that the company will accommodate modern and traditional values in its activities.

- The Program assembled a special working group in 1983 to review and analyze various elements of northern political development. One result of the initiative was the preparation of a major paper which defined federal interests in the North as a precondition to the determination of the on-going roles of federal and territorial governments.

2. Review of Financial Performance

Figure 4: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Northern Co-ordination and Social Development	25,245	20,840	4,405
Northern Economic Planning	18,118	3,858	14,260
Northern Environmental Protection and Renewable Resources	51,046	45,566	5,480
Northern Non-Renewable Resources	9,271	8,513	758
Northern Roads	23,647	24,039	(392)
Canada Oil and Gas Lands Administration	5,849	6,433	(584)
	133,176	109,249	23,927
Authorized person-years	831	827	(4)

Explanation of Change: The difference between actual expenditures and the Main Estimates of $23,927,000 results mainly from the following major items approved by Supplementary Estimates:

	$000
Additional resources for fire suppression	$ 5,305
Increased resources for the co-ordination and monitoring of the Norman Wells Oil Field Expansion and Pipeline Project	740
Contributions as follows:	
Cyprus Anvil Mining Corporation financial assistance	8,061
Governments of the Yukon and Northwest Territories for energy subsidy programs	3,073

	$000
Governments of the Yukon and Northwest Territories for increased hospital care and medicare costs for Inuit and Indians	1,773
Government of the Northwest Territories for community based special employment initiatives	1,453
Government of the Northwest Territories in relation to the Norman Wells Pipeline Project	1,250
Dene Nation and Métis Associations in relation to the Norman Wells Pipeline Project	1,193
Constitutional Alliance of the Northwest Territories to provide support to the Constitutional Working Group	927

C. Background

1. Introduction

The Northern Affairs Program is responsible for fulfilling a departmental mandate for political, economic and social development in the North, and for maintaining the quality of the northern natural environment. In conjunction with the territorial governments and through coordination of the activities of federal departments and agencies, the Program has as its focus the promotion of balanced and sustained development and the wise and environmentally sound stewardship of northern natural resources - oil and gas, minerals, water, forests and lands. Achieving this kind of development by methods which are compatible with the preferences and aspirations of northern residents, while at the same time benefiting all Canadians, involves accommodating diverse and often competing interests of northerners, the resources sectors and the natural environment. There are a number of factors external to the Program, particularily those related to national and international economic circumstances, land claims and territorial government policies and programs, which impact directly on program planning and activities.

There is considerable liaison with other federal government departments such as Energy, Mines and Resources Canada, Transport Canada, Fisheries and Oceans, Environment Canada, Employment and Immigration Canada, and Health and Welfare Canada in relation to national policies and programs relevant in the North. The Memorandum of Understanding and Letter of Agreement creating the Canada Oil and Gas Lands Administration (COGLA) define the relationship between Energy, Mines and Resources Canada and Indian and Northern Affairs Canada with respect to Canada Lands. While each Minister and his respective department enjoys its own mandate respecting Canada Lands, the Administrative Group (supported equally by the two founding Departments) provides a uniform regulatory process under the shared legislation. A Policy Review Committee resolves policy issues that arise (see COGLA, page 3-55).

The Program maintains liaison with territorial governments, particularly with respect to implementation of Economic Development Agreements, transfer of funds, and management of resources. A system of coordinating and advisory committees is in place for this purpose.

Northern Affairs works closely with other programs in the Department. Northern development policies and agreements must be adapted to reflect native claims negotiations and settlements in the North. The Program must also ensure that programs and services available to native northerners are complementary to those delivered by the Indian and Inuit Affairs Program.

The Northern Affairs Program's regulatory and resource management role puts it in regular and frequent contact with varied interest groups such as natives, environmental associations, industrial groups and, in particular, the oil and gas and mining industries. The capacity and willingness of industry to take the risks inherent in investing in remote areas is partially determined by the extent and nature of government regulation.

2. Legal Mandate

The legal mandate of the Department in respect to Northern Affairs is derived primarily from the Department of Indian Affairs and Northern Development Act 1970. The Minister's responsibility in the North is for:

- coordinating the activities of all federal departments and agencies;
- undertaking, promoting and recommending policies and programs for economic and political development;
- fostering knowledge of the North through scientific investigation and technology; and
- managing oil and gas, mineral, water, forests and land resources, including protection of the natural environment.

A complete list of acts administered in whole or in part can be found on page 3-75 in Section III.

3. Program Objective

The Northern Affairs Program's objective is "to advance the social, cultural, political and economic development of the Yukon and Northwest Territories, in conjunction with the territorial governments and through coordination of activities of the federal departments and agencies, with special emphasis on the needs of native northerners and the protection of the northern environment".

4. Program Organization for Delivery

Activity Structure: The Northern Affairs program consists of six main activities. These correspond closely to the organization structure. Transfer payments to the territorial governments are now presented as a separate program (Transfer Payments to the Territorial Governments Program).

The current activity structure of the Program is shown in Figure 5.

Figure 5: Activity Structure

Organization Structure: The Program is organized into three branches at headquarters, as illustrated in Figure 6. Regional offices in Whitehorse, Yukon and Yellowknife, NWT carry out operational activities of the Program in the territories. The two regional offices account for 58.5% of the Program's 866 authorized person-years.

Figure links the headquarters and regional units to the activity structure and provides a breakdown of 1985-86 resources by organizational unit and activity.

Figure 6: Resources by Organization and Activity ($000)

* Note this does not include a statutory item of $2,886,000 and 4 PY's for the Environmental Studies Revolving Fund.

D. Planning Perspective

1. Environment

Social and Political Climate: The Northern Affairs Program's objectives reflect the Department's responsibility for managing the federal government's unique role in Canada's North. While the Program discharges certain quasi-provincial powers (principally, natural resources, except game) retained by the federal government and has responsibilities for socio-cultural matters, it is also responsible for furthuring greater northern capacity for self governance. The process of political evolution leads to some tension as northerners and their political institutions strive to obtain more direct control and influence over decisions affecting the North.

Northern natives are seeking through their land claims, a land and financial base for beneficiaries. They also hope to acquire significant political control and influence over those matters which they deem essential to their continued existence as distinct communities in Canada. Their rights and interests in this respect must be defined and protected with due regard for the interests of non-native northerners and Canadians in general.

Thus the Program seeks to encourage the participation of northerners, particularly natives, in the economic and political development of the North, while respecting traditional values and cultures. In some circumstances these considerations and objectives do not coincide, and the differences must be reconciled. The Northern Affairs Program operates, therefore, in a delicate social, political and cultural milieu, where all areas of Program delivery must be balanced and responsive to the consequent issues that arise.

Economic Climate: The rate of economic development of the North is sensitive to the growth rates of the national and international economies and, in particular, to the demand for petroleum products, metals and other minerals. Current economic forecasts indicate that the Canadian economy will grow slowly in the short term; the domestic and international demand for many metals and minerals is low with modest improvements forecast over the short and medium term.

Prices for crude oil and several metallic minerals have recently been below levels that would encourage the private sector to undertake development. While the search for oil and gas reserves in the Arctic is continuing, the softening of world prices militates against production at an early date. Three major mines (Cyprus Anvil, at Faro and United Keno Hill, at Elsa, in Yukon and the Cominco Pine Point mine in NWT) were compelled to shut down in 1982. With the gradual improvement of world metal market in 1983, the Pine Point and Elsa mines reopened.

2. Initiatives

During 1985-86, the Northern Affairs Program will implement the Northern Oil and Gas Action Plan (NOGAP), which, over a three year period, will involve a $48 million expenditure on research designed to achieve a state of preparedness for northern hydrocarbon production by the 1990's. The program will accelerate federal and territorial socio-economic, environmental and technical research and planning activities. Northern Affairs is responsible for coordinating NOGAP among six funded federal Departments (DIAND, DOE, DFO, EMR, NMC and TC) and two territorial governments in support of government policy, program and regulatory responsibilities.

3. Update on Previously Reported Initiatives

A major review of the fire protection program in the NWT resulted in a new fire management policy for both territories. The policy stressed:

- community involvement - Fire Management Committees have been established;
- expansion of the fire detection system - additional look-out towers have been constructed and an automatic lightning detection system installed in each territory;
- improved initial attack capability - the number of trained fire fighting crews has been increased. New crews have been placed at strategic locations and supplied with air transportation; and
- improved fire prevention - better public awareness has reduced the percentage of man-caused fires from 36% in 1980 to 17% in 1983.

All of these improvements were effective in 1983-84. Improvements in forest management, particulary in regard to forest inventories, is the subject of a separate and ongoing policy development.

- progress in implementing an Economic Development Agreement with the Northwest Territories Government, is highlighted on page 3-11.

4. Program Effectiveness

The achievement of the Program's objective requires a balance to be struck amongst resources and economic development, maintenance of the northern natural environment, and meeting the social and cultural needs of the northerners, in particular northern natives, who comprise approximately 48% of the population. Industrial developments proceed

in a manner which yields optimum benefits to the North and where environmental implications are soundly managed. Measures are applied to enable natives to participate in the modern economy to the fullest extent practicable. At the same time, the national needs of Canada, particularly with respect to energy requirements, must be served, and the Program works to pursue the continuing political and constitutional evolution of the two northern territories. In this context, the Program continues to foster natural resources exploration and development, balanced by the imposition of strict environmental planning and regulation, and the application of programs designed to assist northerners in obtaining employment and business opportunities associated with development, to develop local economies using local skills and resources, and to maintain the cultural identities of native northerners.

In terms of economic development, there have been achievements in spite of the recent downward turn in crude oil and metal markets. The Program provides much of the policy and regulatory framework within which mineral and petroleum exploration and development can occur. There is underway an expansion of an existing oil field at Norman Wells, and the construction of a pipeline to link this field with southern Canada. In 1983 oil and gas activity in the North resulted in an estimated 1300 seasonal jobs and approximately $73 million of northern business expenditures. Mining provided in excess of 2,500 jobs in 1983. The Program played an important part in the commencement of an advance stripping program for the Cyprus Anvil mine through the provision of a loan to the company. Employment funds were also provided to facilitate reopening of the Cominco Pine Point Mine. Consistent with the establishment of Economic and Regional Development Agreements in the provinces, the Program has entered into Economic Development Agreements with each territorial government. They are designed to enable northern residents to both more effectively capture benefits of major resources development and to diversify away from too strong a dependence on such development. To date, over 100 projects under the Canada/NWT Economic Development Agreement have been approved for a total value in excess of $4.1 million.

The Northern Affairs Program has also fostered more diverse regional economic development through a variety of other means. An example is the promotion of cooperative and native development corporations. The latter are a components of land claims negotiations, and will achieve their full potential when funds become available under claims settlements. There are currently 33 cooperatives in the North, employing approximately 330 people full time and with a 1983 business volume of $23 million.

The Program operates to maintain the integrity and aesthetic quality of the northern natural environment through the environmentally sound administration of renewable resources legislation, the fostering of environmental planning by industry, applying environmental assessment and review processes to development

proposals, and undertaking environmental research. Since the advent of environmental programs in 1971, thousands of renewable resources dispositions and environmental approvals have been issued, and the impacts of operations carefully controlled. Environmental planning is now a normal component of industry's project design. The Program has referred 11 major development proposals to full Environmental Assessment and Review Policy (EARP) Panel review, including the recent example - hydrocarbon development in the Beaufort Sea and Mackenzie Delta region. Approximately 100 applied environmental research studies, in such areas as fire ecology, terrain disturbance and ecological surveys, have been completed by the Program over the past 10 years to provide the knowledge essential for sound environmental regulation.

The Northern Environmental Studies Revolving Fund, which commenced operation in 1983, and which is funded by the oil and gas industry, enables both industry and government to conduct the social and environmental research necessary for informed decision making in northern oil and gas exploration and development. Forty one study agreements pertaining to the North are in place.

Since 1980-81, over 450 kilometres of new all weather roads have been constructed in the North. The primary highway system now contains 4,500 kilometers of high standard roads. Under a Five Year Capital Plan for northern roads, a primary road network in both territories will be largely completed, linking larger centres to Alberta, B.C., and Alaska, as well as all weather access to Inuvik and resource roads for major mining developments. The network is vital for economic development, including tourism. Road construction continues to be an important source of employment for northerners, including work by local contractors for highway maintenance. As an example, Liard Highway construction has provided jobs for over 1000 northerners, and maintenance will be undertaken by local contractors.

Political development has advanced significantly in both territories. In Yukon, responsible self government has been achieved in practical terms, although not yet enshrined in legislation. The administration of the Yukon Government rests entirely in the hands of an Executive Council drawn from the elected members of the majority party in the Legislative Assembly. The commissioner now plays a formal role resembling that of a provincial Lieutenant Governor. In the Northwest Territories, all government portfolios except one (the Commissioner retains the Territorial Public Service portfolio), are headed by elected members of the Executive Council. It has generally been agreed that further advances towards responsible government should await resolution of land claims and the issue of the subdivision of the Territory.

The Inuit have been pressing for a separate arctic territory, to be called Nunavut, for several years. In November 1982, the Government of Canada formally accepted the divison of the N.W.T.,

subject to the fulfillment of certain conditions, including agreement amongst northerners on a boundary and on a division of powers. Subsequently, northerners have created a Constitutional Alliance, composed of two Forums (Nunavut and Western) charged with responsibility for developing detailed proposals.

Section II
Analysis by Activity

A. Northern Co-ordination and Social Development

Objective

The Northern Co-ordination and Social Development Activity ensures that northern development reflects the special needs and heritage of native northerners, co-ordinates federal government activities in the North and ensures the development of northern scientific activities.

Resource Summary

This activity accounts for 22.4% of the total Northern Affairs Program expenditures and 10.3% of the total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forcast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Territorial Relations	666	13	2,279	12	1,694	10
Native Health Services	17,852		17,852		10,190	
Socio-Economic Development	4,428	17	10,298	25	8,380	25
Northern Co-ordination and Public Review	1,568	26	1,453	23	1,087	20
Other	3,460	33	3,531	36	3,894	35
	27,974	89	35,413	96	25,245	90

Of total expenditures in this activity, 14.8% will be attributable to personnel costs, 4.8% to professional and special services and 3.7% to other operating expenses. Grants and contributions will make up 76.5% and capital, 0.2%. Revenues, generated mainly through interest on capital loans to the territorial governments, will amount to $2,750,000 (see Schedule of Revenues, page 3-76).

Past Financial Performance

Figure 8: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Territorial Relations	1,694	10	644	13	1,050	(3)
Native Health Services	10,190		8,417		1,773	
Socio-Economic Development	8,380	25	5,382	15	2,998	10
Northern Co-ordination and Public Review	1,087	20	1,019	15	68	5
Other	3,894	35	5,378	53	(1,484)	(18)
	25,245	90	20,840	96	4,405	(6)

Variances by Sub-Activity are explained as follows:

Territorial Relations: The variance of $1,050,000 occurred primarily because of a supplementary estimates item for a contribution of $927,000 to the Constitutional Alliance of the NWT to develop a consensus on the division of the territory. The balance is mainly attributable to the costs of the Commissioners' offices in the two territories.

Native Health Services: The variance of $1,773,000 is due to a supplementary estimates item for medical and hospital care contributions for Indians and Inuit required by increased costs of these services in the two territories.

Socio-Economic Development: The variance of $2,998,000 is attributable primarily to expenditures on items included in supplementary estimates.

- Contribution to the NWT Government for special employment initiatives — $1,453,000
- Contribution to the NWT for the Norman Wells Pipeline Project — 1,250,000
- Coordination of the Norman Wells Pipeline Project — 740,000

- Contribution to the Inuit Tapirisat for the Inuit Circumpolar Conference 175,000

These additions were offset by lapses in Vocational Training ($223,000), Special On the Job Training ($196,000) and other miscellaneous items totalling $201,000.

Northern Coordination and Public Review: The variance of $68,000 was due to the additional contribution required by native and other groups to enable them to be prepared for and participate in public review of hydrocarbon transportation proposals.

Other: The variance of $1,484,000 is attributable to the transfer out to the Northern Economic Planning Activity of contribution funding for Inuit Economic Development, in the amount of $1,599,000. As well, there was an offsetting overexpenditure of $177,000 in this Activity's share of Program management and support services, explained under Management Support, page 3-38.

Person-Years: The variance of (6) PY's occurred primarily because of an over-utilization on the Norman Wells Project of 6 PY's and in Northern Co-ordination and Public Review, of 8 PY's, offset by a lapse of 5 PY's due to the closure of the Vocational Training Section. The balance was due to delays in staffing.

Description

The Northern Coordination and Social Development Activity is responsible for: generating Program policy and ensuring the coordination of the Program's and other federal policies within the Program objective; management of federal/territorial relations including administration of transfer payments to territorial governments; development of policies for the political and constitutional development of the territories; coordination of reviews by the public and the Program relating to major resource development proposals in the North; management of special programs in support of northern native social, cultural and economic development; Program coordination for comprehensive land claims, parliamentary and external relations, circumpolar affairs, northern science and research, and the Norman Wells project oil field development and pipeline project.

Territorial Relations: This sub-activity involves responsibilities in the areas of northern political development, territorial funding, and territorial liaison. Policies, strategies and programs are prepared for constitutional and political development and for the transfer of programs and responsibilities from the federal to the territorial governments in accordance with national policy. Secondly, the Transfers to Territories Program is managed in accordance with Federal/Territorial Financial Agreements, and financial and fiscal analysis is provided in regard to political development and the transfer of programs and responsibilities. Thirdly, the sub-activity

undertakes the coordination of federal activities with those of territorial governments, and provides resources for the offices of the two Commissioners.

Native Health Services: This sub-activity provides financial support to the territorial governments for the provision of hospital and medical care for Inuit and status Indians. Support is provided in the form of contribution agreements with each territory and payments are based on the actual use of hospital and medical services. In Yukon, because there a premium based health care plan in effect, the contribution agreement provides for the payment of premiums for indigent status Indians.

Socio-Economic Development: This sub-activity supports the marketing of Inuit arts and crafts through native owned marketing agencies; promotes the recognition of Inuit art and artists through a program of exhibitions; and promotes the strengthening of Inuit culture by supporting cultural education centres and endeavours in the fields of cultural and linguistic development. It furthers the employment of native people through an on-the-job training program, and makes available resources to ensure native participation in an intergovernmental program for caribou conservation and management.

The sub-activity covers the operating losses of a low income rental/purchase housing program for status Indians in the Yukon. It is a major contributor to Inuit economic development which it supports through a program of loans, contributions and bank loan guarantees to a variety of business enterprises, including co-operatives.

Northern Co-ordination and Public Review: This sub-activity provides a Program focus for policy direction, control and coordination, including input to the strategic planning process and review of other departmental and government wide policy initiatives affecting the North. Coordinated Program positions are developed with respect to negotiation of comprehensive land claims and claims settlement implementation. Program wide services in parliamentary affairs, external relations, annual publication of Government Activities in the North and the Annual Northern Expenditure Plan, and protocol arrangements relating to northern diplomatic tours and visits are undertaken. The sub-activity is responsible for management of the Program's input and participation in public reviews on major northern development projects, and facilitates public participation in the public review process through intervenor funding. It is responsible for overall coordination of the regulation of the Norman Wells Oil Field Expansion and Pipeline Project, and for the provision of funds to the Dene Nation and Métis Association of the N.W.T. to assist local communities in coping with the project's impacts and to develop associated business opportunities. In addition, the sub-activity provides for the fostering of northern science, and the coordination and review of technological, economic and scientific developments in circumpolar countries. Specific responsibilities include advising the

Program, other government departments, industry and academe on northern scientific matters, ensuring a coordinated and effective approach within the Program to the funding and implementation of Program scientific activities in the North, promoting northern science development inter alia through the development of appropriate policies and programs, managing research and analysis of scientific and technological activities between Canada and other circumpolar countries, and developing and maintaining a repository for documents and data relating to northern sciences.

Other: The Activity includes a proportionate share of Program management and support services costs and person-years (see page 3-40 under "Other"). In addition are costs related to operation of the Northern Science Research laboratories, grants to universities for northern science, and general administration within the Activity.

Performance Information/Resource Justification

Territorial Relations: Resources are applied to development of policies concerning the respective roles and responsibilities of the federal and territorial governments, with a focus on the evolution of responsive and accountable systems of government in the two northern territories. Yukon has progressed to virtually complete responsible government within its jurisdiction as defined in the Yukon Act. A political party system electing 16 members is in place, and a fully elected Executive Council operates the government. The Commissioner's role is analagous to that of a provincial Lieutenant Governor.

Agreement has been announced for the division of the N.W.T. Funds will continue to be provided during 1985-86 to the two political groups, (the Western and Nunavut Constitutional Forums) established to conclude negotiations on the boundary. Resources are also applied to management of the Transfer Payments to Territorial Governments Program (Person-years only), to the provision of direction and coordination for the federal government's northern policies and objectives vis à vis the Territorial governments.

Native Health Services: Contribution agreements are negotiated with both territories for the health and hospital care of Inuit and status Indians. The contributions are based on the fact that the territorial governments do not have to pay for the hospital care extended to Inuit and Indians. Payments are based on actual services provided to Indians and Inuit and take into consideration the proportion of Extended Program Funding received through Health and Welfare Canada which is applicable to Indians and Inuit. In Yukon, the Department pays the medicare premiums for needy Indians based on a monthly billing.

Figure 9 indicates the estimated costs of these contributions for 1985-86.

Figure 9: Contributions for Health Care ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	%	$	%	$	%
Hospital services	15,341	85.9	15,341	85.9	8,515	83.6
Medicare	2,511	14.1	2,511	14.1	1,675	16.4
	17,852	100.0	17,852	100.0	10,190	100.0

Socio-Economic Development: This sub-activity has achieved, since 1964, a stabilization in the wholesale value of Inuit arts and crafts at an annual level of $5 million. An improvement in the native economy can be identified by the fact that the Arctic Cooperatives have achieved an annual payout to native people of approximately $11 million, covering wages and the purchase of their arts and crafts, fish, fur and other country products. Over the 10 year duration of the on-the-job training program, an annual average of 150 natives have received training, of which approximately 55% obtained employment in both the public and private sectors.

The Inuit Economic Development Program enables Inuit entrepreneurs to obtain funding from either contributions, under the sub-activity, from access to a revolving Eskimo Loan Fund established at a level of $5 million for the N.W.T., or through bank loan guarantees of up to $9.9 million annually.

In 1985-86, approximately $5 million, administered under the sub-activity, will be used to support social, cultural and economic programs as shown in Figure 10.

Figure 10: Socio-Economic Expenditures ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	Oper.	Grants and Contr.	Oper.	Grants and Contr.	Oper.	Grants and Contr.
Inuit economic development	506	565	734	2,080	814	569

Northern Co-ordination and Public Review: Under this sub-activity, work is undertaken to guide and coordinate the Program's involvement in the four northern land claims, including implementation of the Inuvaluit Land Claim, proclaimed by Parliament on 25 July 1984. Requirements for public review processes for major resources developments are determined, and departmental representations and inputs are organized. Public interest groups needing financial support to participate in reviews are funded; recent hearings have involved the Arctic Pilot Project, the Beaufort Sea EARP Panel hearings, the Slave River Hydroelectric Proposal and the Polar Gas application. A document centre on project applications is maintained.

Departmental assistance of $1.5 million has enabled the Dene Nation and Métis Association of the N.W.T. to enter into a jointly owned and managed drilling operation for the Norman Wells oilfield expansion.

In terms of northern science, initiatives have been taken to coordinate government wide northern research activities. The Northern Scientific Resources Centres at Inuvik and Igloolik are managed to provide support to various scientific activities and research projects undertaken by government, industry and universities. Grants are made for the training of scientists undertaking northern projects in Canadian universities. Core funds are provided to the Association of Canadian Universities to coordinate Canadian universities involved in northern research. Socio-economic, technological, scientific and political issues in the circumpolar regions are monitored and analyzed in support of the Program's objectives. Figure 11 provides details on research development grants for 1985-86.

Figure 11: Grants for Research Development ($000)

B. Northern Economic Planning

Objective

The objective of Northern Economic Planning is to plan and promote, consistent with national and northern objectives and in co-operation with the territorial governments, the orderly development of the natural and human resources of the North. This generates the maximum in economic, social, and cultural benefits to northerners, and to Canadians in general.

Resource Summary

This Activity accounts for approximately 5.3% of total Northern Affairs Program expenditures and 6.0% of the total person-years.

Figure 12: Activity Expenditures ($000) and Person Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Economic Development	5,495	36	4,575	32	7,293	26
Project Assessment	422	7	11,636	7	9,880	9
Other	638	9	655	9	945	12
	6,555	52	16,866	48	18,118	47

The drop in Estimates 1985-86 from Forecast 1984-85 results mainly from the termination of financial assistance to the Cyprus Anvil Mining Corporation. This assistance amounted to $11,200,000 in 1984-85 ($7.2 m in new resources and $4.0 m reallocated from existing resources) and $8,061,000 in 1983-84.

Of total expenditures in this Activity, 40.2% will be attributable to personnel costs, 8.2% to professional and special services and 4.3% to other operating expenses. Grants and contributions will constitute 47.3%.

0321

1983-84 Financial Performance

Figure 13: 1983-84 Financial Performance ($000)

	Actual		1983-84 Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Economic Development	7,293	26	2,540	29	4,753	(3)
Project Assessment	9,880	9	424	6	9,456	3
Other	945	12	894	16	51	(4)
	18,118	47	3,858	51	14,260	(4)

Variances by Sub-Activity are explained as follows:

Economic Development: A variance of $4,753,000 was primarily due to:

- a transfer in from the Northern Coordination and Social Development Activity of the Inuit Economic Development Program. $1,599,000

- the addition of three supplementary estimates items:

  - Northern Energy Subsidies 3,073,000
  - contribution to the Fitz/Smith Native Development Corporation 198,000
  - contributions to territorial governments under the Federal Buildings Retrofit and Off Oil Programs 203,000

- under expenditures attributable to the transfer of functions to the Northern Non-Renewable Resources and Northern Roads Activities. 278,000

Project Assessment: A variance of $9,456,000 occurred through addition of three supplementary estimates items:

- subsidiary agreement on National Resources Development under the Canada/Yukon General Development Agreement:

- contribution to the Yukon Government 298,000
- contribution to the Council for Yukon Indians 40,000

- contribution to the NWT Dene and Metis Association for the Norman Wells Project. 1,193,000

- contribution to the Cyprus Anvil Mining Corporation 8,061,000

Other: A variance of $51,000 is attributable to the over expenditure explained under Management Support, page 3-38.

Person Years: A [illegible]lus of four person-years was utilized by the Northern Roads (3) [illegible] Northern Non-Renewable Resources (1) Activities.

Description

The Northern Economic Planning Activity is concerned with the development of policies and programs that relate to the economic development of the territories, involving both the regional economic viability of the territories and the contribution of territorial resources to the national economy. Policy work supporting this role includes analytical work related to development of strategies that the federal government can pursue with respect to northern economic development, more specific sectoral policies such as a northern energy policy, and review of regulatory and approval process that affect development proposals and projects in the north. Programs are developed under Economic Development Agreements in each territory, and Northern Benefits Committee operate to foster native benefits across the North. The Activity takes the lead in coordinating the regulatory and approvals process for major developments, and in coordinating an interdepartmental program of research to ensure federal preparedness for northern hydrocarbon production by the early 1990's (Northern Oil and Gas Action Plan - NOGAP).

Economic Development: The sub-activity provides a Program focus for economic planning and policy development through research, analysis, and development of an improved data system on the northern economy. Economic Development Agreements for each territory are negotiated and implemented to foster the cooperative and coordinated development of the territory. One such project under the N.W.T. Agreement is the marketing and promotion campaign, operated by the Inuvaluit Development Corporation, designed to expand the outfitting business in the western Arctic. The fostering of socio-economic benefits for northerners is pursued through the support of Northern Benefits Committees and Canada Benefits Agreements, the latter initiated under the Canada Oil and Gas Act. To ensure electrical energy supply for the North, and equitable pricing, the analysis, development and administration of northern energy price subsidies is undertaken, as well as policy work to establish the long term role and mandate of the Northern Canada Power Commission.

Because of the widespread perception that the current regulatory and approval processess of government pose difficulties for economic development, a regulatory review project is underway to effect a streamlining of regulatory requirements. The review involves extensive collaboration with Territorial governments, federal departments and agencies involved in northern resources development, industry and interest groups.

The Northern Oil and Gas Action Plan (NOGAP), involving six federal departments and both territorial governments, is coordinated under the sub-activity. NOGAP is a multi-year, $48 million program of socio-economic, environmental and technical research to support government responsibilities and achieve a state of preparedness for northern hydrocarbon production by the early 1990's.

Project Assessment: The sub-activity facilitates the orderly development of major non-renewable resource development projects, such as the Norman Wells, N.W.T., oilfield expansion and pipeline project. The government's planning, assessment, implementation and evaluation activities related to major projects are managed by coordinating the actions of government departments which have responsibilities related to a major project. It ensures that the advantages of such projects to the North are at a maximum while concurrently preserving the social, cultural and natural environment of the North.

Other: The Activity includes a proportionate share of Program management and support services costs and person-years (see page 3-40 under "Other").

Performance Information/Resource Justification

Economic Development: Extensive industrial activity focussed on major non-renewable resources has already occured in the northern territories. During the next two decades it is expected to undergo large increases. For example, hydrocarbons from the Beaufort Sea region or the Arctic Islands could begin to enter national and international markets during the current decade. However, considerable uncertainty surrounds the timing and scale of major non-renewable resource development because of its dependence on international markets which can undergo rapid and unforeseeable changes. Currently, the markets for many, though certainly not all, minerals, and for oil and gas are not encouraging. However, this could change rapidly, especially for hydrocarbons. The government must therefore be in a position to respond quickly to ensure that project review, approval and implementation proceed as expeditiously as possible.

The Activity strives, wherever possible, to encourage the development of the community-based local/regional economy. In part, this has proceeded via the establishment of links between large scale industrial activity, such as the exploration for oil and gas in the

Arctic, and the community-based local/regional economy. Many northerners have thus benefited from industrial employment while at the same time retaining, and strengthening, their lifestyle based on hunting, trapping and fishing. Purchases of goods and services by exploration companies have become important to the local economies of many communities. In part, the encouragement of local/regional development has proceeded independently of major resource activity. A balanced approach has been sought, one which strives to ensure that northern residents can benefit from major resource activity while at the same time fulfilling their own individual and collective economic objectives.

Resources will be applied, during 1985-86 to the development and implementation of subsidiary agreements under the Canada/Yukon and Canada/NWT Economic Development Agreements. In Yukon, work will proceed to develop Renewable Resources, Mineral Resources and Economic Planning Sub-Agreements. As well, it is expected that a Small Business and Tourism Sub-Agreement will be negotiated. In the NWT, operation of the Human Resources Development, Domestic-Market Development, and Natural Resources Development Sub-Agreements will continue for a third year.

During 1985-86, policy work will continue on the provision of direct federal energy subsidies to consumers and small business enterprises outside the territorial capitals, with the objective of bringing energy costs into line with those of Yellowknife and Whitehorse. These subsidies amounted to $4.1 million in 1984-85. Policy work will also continue in regard to the operations of the Northern Canada Power Commission, dealing with relocation of its headquarters to Yellowknife, implementation of new rate setting principles and territorial participation in regulation of the utility.

Project Assessment: Large-scale resource development is foreseen for Canada's North. An example of this is the extraction of hydrocarbon from the Beaufort Sea and the expansion of the oilfield at Norman Wells, N.W.T. The pace of development will depend not only on national considerations but also on the ability of industry and government to meet northern objectives. The government must be able to respond quickly to proposals in a coordinated manner and ensure that project review, approval and implementation, which involves a number of public and private sector interests, proceeds as expeditiously as possible in the public interest. A strengthened process for coordinating project management information systems and assessing major projects will be operational in 1985-86.

2325

C. Northern Environmental Protection and Renewable Resources

Objective

The objective of the Northern Environmental Protection and Renewable Resource Activity is to implement and maintain an effective, comprehensive environmental assessment and renewable resource management regime and to conduct an applied environmental research program.

Resource Summary

This Activity accounts for 39.7% of the total Northern Affairs Program expenditures and 53.6% of the total person-years.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Northern Research and Environmental Protection	1,764	14	1,636	11	1,746	14
Management of Renewable Resources	32,763	268	31,587	263	35,335	302
Management Support	7,844	105	8,133	103	12,917	128
Other	7,176	77	6,818	75	1,048	6
	49,547	464	48,174	452	51,046	450

Revenue is generated mainly from the issue of leases, licences and permits. The amount of $396,000 is credited directly to the Consolidated Revenue Fund (See Schedule of Revenues, page 3-75).

Of total expenditures in this Activity in 1985-86, 43.3% will be attributable to personnel costs, 12.9% to professional and special services and 35.9% to other operating expenses. Capital will constitute 7.7% while grants and contributions will make up 0.2%.

Past Financial Performance

Figure 15: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Northern Research and Environmental Protection	1,746	14	1,387	10	359	4
Management of Renewable Resources	35,335	302	31,795	324	3,540	(22)
Management Support	12,917	128	11,532	114	1,385	14
Other	1,048	6	852	6	196	
	51,046	450	45,566	454	5,480	(4)

Variances by Sub-Activity are explained as follows:

Northern Research and Environmental Protection: An over expenditure of $359,000 was due to costs associated with supporting a Northern Conservation Task Force and the initiation of a Beaufort Sea Environmental Monitoring Program.

Management of Renewable Resources: A variance of $3,540,000 was primarily due to an overexpenditure in the unpredictable area of forest fire fighting, of $5,305,000, covered by supplementary estimates, and reduced by underexpenditures in land use mapping ($470,000), approval delays in land use planning ($1,081,000) and administrative restraint ($340,000).

Management Support: The variance of $1,385,000 was due primarily to the Activity's share of the Program management and support services overexpenditure of $1,377,000, identified in the table below.

Activity Share of Program Management and Support	Estimates 1983-84		Actual 1983-84		Variance	
	$000	P-Y	$000	P-Y	$000	P-Y
Northern Co-ordination and Social Development - 6.7%	582	9	759	10	177	1
Northern Economic Planning - 7.7%	678	9	872	12	194	3
Northern Environmental Protection and Renewable Resources - 54.2%	4,762	69	6,139	83	1,377	14
Northern Non-Renewable Resources - 28.9%	2,531	34	3,273	45	742	11
Northern Roads - 2.5%	217	3	283	4	66	1
Total - 100%	8,770	124	11,326	154	2,556	30

Excludes Employee Benefits Plans Costs

The total variance, for the Program, of $2,556,000 and 30 person-years, is explained as follows:

- over expenditure in departmental common services (e.g. centralized computer systems, material management, staff training and administrative support). $1,013,000

- internal Program resources reallocated to fund the following:

  - Constitutional Working Group 342,000 5 PY's
  - Placer Mining Guidelines Review 162,000
  - Management Improvement Plan (MIP) Phase II 242,000 2 PY's

• utilization of person-year lapses, as the result of staff turnover and staffing delays, to cover off ministerial staff and Executive Interchanges as well as to meet workload requirements of regional personnel and administration operations.	744,000	21 PY's

For disclosure consistency, this Activity's share of Program management and support services in subsequent years is shown in the Resource Summary under "Other".

Other: A variance of $196,000 was primarily due to an over expenditure in lands administration of $157,000.

Person-Years: The net lapse of 4 PY's is attributable to a lapse of 13 PY's in Land Use Planning due to approval delays, offset by an over utilization of 14 PY's in the Activity's share of Program management and support services as identified in the table above.

Description

This Activity is responsible for administration of environmental assessment and review procedures with respect to resource exploration and development proposals; applied environmental research and monitoring of environmental effects of major developments; administration of legislation and programs for the management and disposition of rights to use water, forests and land resources; regulation of environmental impacts of land use and offshore activities; development of land use plans, and management of a program to prevent and control forest fires.

Northern Research and Environmental Protection: Under this sub-activity, environmental assessment of all resource exploration and development proposals is conducted, and environmental terms and conditions produced for inclusion in the legal approvals issued by the Program to northern operators (e.g., land leases, water licences). For smaller projects, this work is undertaken as a normal component of renewable resources management. Larger scale projects are subject to more extensive stages of the Federal Environmental Assessment and Review Process (EARP), culuminating in public reviews, for major projects, by EARP Panels.

Applied environmental research is conducted in support of the regulatory mandate of the Northern Development Program. Research results are used to develop guidelines on environmental problems of pan-northern significance, to identify and quantify, for assessment purposes, environmental impact problems of specific developments, and to monitor environmental effects and therefore the adequacy of regulatory measures imposed on major developments. One such project is research into reclamation of Yukon streams used for placer mining.

Research funding to support decision making for oil and gas exploration and development is managed through the Environmental Studies Revolving Fund (DIAND) and obtained by ministerial levy from the industry. The Fund provides financial resources for environmental and social studies necessary for decision making related to oil and gas activities in the northern regions of Canada. An example is research on the rare and endangered bowhead whale in the Beaufort Sea, in order to determine if population changes are due to hydrocarbon drilling activity or to variable food supply associated with oceanographic and meterorologic conditions.

Management of Renewable Resources: This sub-activity is responsible for the management of northern Crown lands (surface estate), waters and forests, and the conduct of land use planning. It involves the processing of applications for use of these resources and the consequent issuance of leases, rights of way, permits and licences. Inspections are conducted to ensure compliance with terms and conditions of use. Resource inventories are undertaken to develop knowledge of the quantity, quality and location of the resources. Forest fire prevention and control is an integral component of forests management, and, depending, on the severity of the fire season, may be the major cause of expenditures under the sub-activity. In addition, the sub-activity includes regulation of hydropower developments on federal Crown land in the provinces.

Land Use Planning is a relatively new program. This program defines allowable uses of renewable resources in planning areas, through zoning and the constraints to be imposed on such uses. It is an undertaking which embraces all four renewable resources - water, forests, lands and wildlife (the latter being under territorial government and DOE jurisdiction). Land Use Planning is not a resource sector like the others, but rather a process through which competing and conflicting demands for resource use in an area can be addressed and solutions achieved.

Management Support: This Sub-Activity contains Renewable Resources and Environment staff and associated costs for management of field offices outside the regional headquarters at Yellowknife and Whitehorse. As well, it covers general administration for the Activity at headquarters and the provision of contributions to the Yukon Conservation Society and the Canadian Arctic Resources Committee.

Other: For Main Estimates disclosure purposes all Activities are allocated a proportionate share of overall Program management and support services costs and person-years (overhead), covering the offices of the Assistant Deputy Minister and Directors General, administrative functions (such as drafting and operational planning), and services provided in the regions in the areas of finance, personnel, communications, and engineering and architecture. These resources are allocated to each Activity in the following proportions, and entered under the heading "Other".

- Northern Environmental Protection and Renewable Resources 54.2%
- Northern Coordination and Social Development 6.7%
- Northern Economic Planning 7.8%
- Northern Non-Renewable Resources 28.8%
- Northern Roads 2.5%

For 1985-86 these overhead resources are 129 person-years and $10,816,000 plus $575,000 for Employee Benefit Programs.

Performance Information/Resource Justification

Northern Research and Environmental Protection: This sub-activity applies expertise in the environmental sciences to identify and conduct research on specific environmental issues in the North, to administer agreements on transboundary environmental issues (e.g., the Canada/Denmark Agreement on Cooperation Relating to the Marine Environment), and to undertake environmental assessment and review of major development projects. Advice on the content of environmental terms and conditions imposed on operators through leases, permits, licences, and oil and gas Drilling Program Approvals or Drilling Authorities is generated. Program positions are stated before Panels convened under the Federal Environmental Assessment and Review process (EARP). Under the Environmental Studies Revolving Fund (ESRF), 41 studies of relevance to the North have been undertaken since the inception of the program in 1983. In addition, approximately 100 other research projects have been completed under the sub-activity since 1974.

Management of Renewable Resources: This sub-activity is largely non-discretionary in nature because of its legal responsibility to respond to client applications for rights to use northern water, forests and lands and to protect those resources through programs such as prevention and fighting of forest fires. In the water sector, licences are issued to applicants for the right to use northern waters, and planning data on water levels, flows and chemical quality are obtained through extensive networks across the North. Environmental controls are placed on offshore oil and gas operators to protect the quality of Arctic waters. In the lands sector, surface rights are granted through leases of Crown land, agreements of sale, rights of way and licences of occupation. Tracts of land are withdrawn by Order-in-Council for such purposes as national parks or settlement of native land claims, and rights are granted to quarry for gravel. Controls are placed on operators who temporarily occupy vacant Crown lands, to protect the northern terrestrial environment.

Timber cutting permits are issued for local and commercial purposes. Figure 16 presents statistics on the volume of business over the most recent three year period.

The administration and management of water, lands and forests will be further improved with the development of a framework for the integrated management of this renewable resource base. This approach will take into account the relationship with non-renewable resource sectors, integrate environmental, economic, social and cultural concerns and minimize institutional competition.

Northern Land Use Planning will become fully operational in 1985-86 with the establishment of Land Use Planning Commissions in each territory and the initiation of planning activities for key priority areas.

Figure 16: Renewable Resources Transactions and Approvals, Yukon and Northwest Territories.

	1981-82	1982-1983	1983-1984
Water Management	585	540	575
Land Management	1,226	1,745	1,227
Forest Management	1,291	1,971	1,767

The major user of resources in this Activity is forest fire prevention and control, with an estimated budget of $14,923,000 for 1984-85. The program includes funds for presuppression and suppression. The pre-suppression budget includes the fixed funds required to maintain a fire-fighting capacity in each territory involving the costs of standby fire crews, prevention programs, look-out tower systems, and aircraft and equipment rentals. The suppression budget includes the additional funds required to fight fires as they occur, over and above the funds available in the pre-suppression budget.

Figure 17 shows the allocation of funds for fire management for 1985-86.

Figure 17: Funds Allocated for Fire Management ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	%	$	%	$	%
Presuppression	13,231	84.7	12,996	67.4	12,041	55.9
Suppression	2,263	15.3	6,280	32.6	9,491	44.1
Total	15,494	100	19,276	100.0	21,532	100.0

Suppression budgets are nominal and are provided on an as required basis. Figure 18 shows suppression expenditures over a five-year period.

Figure 18: Expenditures Used for Fire Suppression Over a Five-Year Period

	1983-84	82-83	81-82	80-81	79-80
($millions)	9.5	9.8	8.6	13.4	3.2

The Suppression budget depends on the level of fire activity in each year. Figure 19 depicts the trend of activity over a five year period.

Figure 19: Fires Fought and Area Burned

Year	Area Protected (km^2)*	Number of Fires	Area Burned (ha)	Area Burned per Fire (ha)	Area Burned as a Percentage of Protected Area %
1979	317,259	255	226,529	888	0.700
1980	354,845	378	959,420	2,538	2.700
1981	396,915	357	812,088	2,275	2.000
1982	396,915	395	58,265	147	0.100
1983	396,915	346	81,650	236	0.206
1984	396,915	476	59,500	125	0.150

* Note: 100 ha = 1 km^2

Management Support: Approximately $8.1 million and 105 person-years are allocated to this component of the Activity.

D. Northern Non-Renewable Resources

Objective

The Northern Non-Renewable Resources Activity encourages and provides for the orderly exploration, development and conservation of non-renewable resources.

Resource Summary

This Activity accounts for 10.4% of the total Northern Affairs Program expenditures and 14.5% of the total person-years.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Management of Non-Renewable Resources	9,369	80	10,434	80	4,653	74
Other	3,676	46	3,378	47	4,618	60
	13,045	126	13,812	127	9,271	134

Revenue is generated through fees, permits and royalties. Estimated revenue for 1985-86 is $2,275,000 and is credited directly to the Consolidated Revenue Fund (see Schedule of Revenues, page 3-76).

Of total expenditures in this Activity, 44.1% will be attributable to personnel costs, 8.8% to professional and special services and 27.0% to other operating expenses. Capital will constitute 2.9% while grants and contributions will make up 17.2%.

Past Financial Performance

Figure 21: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Management of Non-Renewable Resources	4,653	74	4,672	70	(19)	4
Other	4,618	60	3,841	51	777	9
	9,271	134	8,513	121	758	13

Variances by Sub-Activity are explained as follows:

Management of Non-Renewable Resources: The under expenditure of $19,000 is attributable to the transfer in of $105,000 from the Northern Economic Planning Activity being offset by an under expenditure in Prospectors' Assistance Grants of $20,000 and a lapse of $104,000 mainly due to administrative restraint.

Other: A variance of $777,000 is mainly due to this Activity's share of the variance for Program management and support services (of $742,000) explained on page 3-38, Management Support.

Person-Years: Eleven of the 13 person-year variance is attributable to the Activity share of Program management and support services, explained on page 3-38, Management Support.

Description

Management of Non-Renewable Resources: The Northern Non-Renewable Resource Activity is responsible for the management and development of mineral resources including oil and gas.

Mining: The activity involves the planning for and development of mineral policies for the North, concerning disposition of Crown mineral rights, exploration and development, and the operation of mines in both territories. The administration of mining legislation is undertaken by operational staff throughout the territories (approximately 85% of staff is regional.) Recommendation are made on the revision of mining statues, regulations and guidelines in order to

encourage mineral development in the territories and to ensure satisfactory benefits to the citizens of Canada in general, and the territories in particular. Co-ordination of other federal departments and territorial agencies included in programs affecting mine development is provided, as well as the assembling of data and the conducting of studies with respect to Canada's mineral policies. Advice is provided to senior officers of the Department and interdepartmental committees dealing with Canada's mineral potential.

Oil and Gas: Oil and Gas activity involves the identification of issues, conflicts and objectives, with consequent formulation, recommendation and implementation of appropriate policy and direction respecting northern oil and gas operations to further northern policy objectives. Operational aspects are managed by the Canada Oil and Gas Lands Administration (COGLA). The activity is charged with the integration and harmonization of COGLA's role with those responsibilities retained by the Program, principally, social, economic, environmental and territorial concerns arising from oil and gas management.

In 1981, the Canada Oil and Gas Lands Administration (COGLA) was established jointly by the Ministers of Energy, Mines and Resources and Indian and Northern Affairs, to administer federal legislation governing oil and gas exploration and development on Canada Lands. Responsible to both Ministers according to their respective jurisdiction for Canada Lands, COGLA implements the Canada Oil and Gas Act and the Oil and Gas Production and Conservation Act.

Other: The Activity includes a proportionate share of Program management and support services costs and person-years (see page 3-40 under "Other"). In addition are costs related to general administration within the Activity.

Performance Information/Resource Justification

Management of Non-Renewable Resources:

Mining: A policy, legislative and administrative framework is maintained to foster mineral exploration and development in the North. Extensive background studies and consultation have been carried out to develop a comprehensive understanding of the northern mineral industry, its inter-relationship with other sectors of the economy, the opportunities for future development and the constraints it faces in realizing these opportunities. The analysis has shown that mining provides substantial benefits to the territorial and national economies and that it can compete if given a favourable investment climate in which to operate. However, structural changes in the international mineral industry make it imperative that the northern industry continue to improve its efficiency and productivity

in order to remain competitive in world markets. Options for government actions to encourage exploration and mining in the North will continue to be developed.

Administrative outputs include registration of mineral rights, collection of royalties, fees and rentals, approval of company exploration reports, mine safety inspections (Yukon only - this function is handled by the Territorial Government in the N.W.T.), and issuance of assistance grants to prospectors. As of 31 March, 1984, there were some 100,000 mining claims and permits in good standing in the North, covering approximately 6 million hectares of land. Twelve hardrock mines and approximately 230 placer mines produced over $500 million of minerals in 1983, down from the $800 million peak value in 1980. During the past 10 years (1974-75 to 1984-85 inclusive) an average of 41 prospectors per year have received assistance totalling $400,000 over that period. This program terminated in 1984-85. Mine inspections in Yukon average 72 per year. An average of 420 company exploration reports are reviewed for approval each year.

Oil and Gas: With the 1981 establishment of COGLA and the subsequent transfer of person-years and resources related to the administration and regulation of oil and gas industrial activities, the activity now focusses on:

- The development and enunciation of the northern framework of policies, programs and strategies required to discover, delineate and exploit northern oil and gas resources.

- Facilitation of the interaction between COGLA and the Northern Affairs Program so that effective and balanced oil and gas exploration and development can be achieved.

- Management of the Crown's one-third working interest in Norman Wells and administration of the 1944 Proven Area Agreement.

Therefore, the major outputs in the oil and gas area are in the form of policies, strategies, plans and identification of problems. Consequently, the measurements of the quality and quantity of the outputs must be measured indirectly. The amount of annual exploration expenditures (see Figure 22) is one such measurement. A component of these expenditures, the Northern Benefits Expenditures, reflects the achievement of social and economic goals. Under the existing Exploration Agreements, the increased level of exploration may yield northern benefits to the extent of 20% of total industry expenditures between 1985 and 1987.

Workload is dependent upon the pace and level of exploration and development by the private sector, the world price and demand for oil and gas resources and the northern native land claim settlements which may impact on exploration and development time tables.

The pace of northern exploration and development has remained at a stable plateau with some 20 to 25 exploratory wells per year over a five-year period (23 wells in 1983). The level of oil and gas investment has continued to rise ($770.2 million in 1983). The overall number of oil and gas rights held by industry is expected to remain fairly static at about 40 million hectares (100 million acres) in approximately 100 exploration agreements (79 agreements in force in 1983).

It is expected that the Agreements will ultimately yield an estimated $519 million in northern goods and services and provide up to 3,900 northern employment opportunities over the five year period from 1983-88 ($73 million and 1700 jobs in 1983, estimated). These activities will represent a moderate increase in addition to the Norman Well Expansion Project.

Figure 22: Oil and Gas Exploration Expenditures ($ million)

E. Northern Roads

Objective

The Northern Roads Activity develops policy, prepares plans and sees to the implementation of the transportation infrastructure required to serve the inter-community and resource development needs of the two territories. It takes into account the impacts of these developments on the northern economy and the opportunities they create for the employment of natives and northerners.

Resource Summary

This Activity accounts for 14.6% of the total Northern Affairs Program expenditures and 1.4% of the total person-years.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Road Construction and Maintenance	15,622	7	21,237	8	21,964	9
Native Training and Employment	2,400	2	1,759	3	1,400	4
Other	245	3	253	3	283	4
	18,267	12	23,249	14	23,647	17

Of total expenditures in this Activity, 2.7% will be attributable to personnel costs, 0.8% to professional and special services and 4.5% to other operating expenses. Capital will constitute 92.0% of the total.

Past Financial Performance

Figure 24: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Road Construction and Maintenance	21,964	9	22,541	4	(577)	5
Native Training and Employment	1,400	4	1,208	4	192	0
Other	283	4	290	3	(7)	1
	23,647	17	24,039	11	(392)	6

Variances by Sub-Activity are explained as follows:

Road Construction and Maintenance: An under expenditure of $577,000 was due to early freeze-up and wet field conditions causing early closure of construction projects.

Native Training and Employment: An over expenditure of $192,000 is attributable to an extension in the length of the program and procurement of additional equipment.

Person-Years: The variance of five person-years in Road Construction and Maintenance occurred because of the need for supervision on capital projects.

Description

Road Construction and Maintenance: Policy is developed, programs and projects are planned and implemented, and a multimillion dollar program for the construction of new highways, community access roads, and the reconstruction of inter-territorial highways is administered.

Provision is made for financial assistance (cost-sharing) to developers for road access to viable resource areas. This program for resource access roads is currently under review. The current program allows the federal government to provide assistance of up to 50% of the cost of initial access roads and of up to 66% of the cost of permanent access roads. Socio-economic and cost-benefit studies

permit assessment of the value and the viability of a project. Decisions are based primarily on the economic potential of the proposed development.

Through consultation with the territorial governments, local authorities, Chambers of Mines, construction associations, developers and industry, new incentives are being developed for the provision of low grade access roads to development areas. 1985-86 will be the first year of the implementation of a Community Access Roads Program that was introduced in the Northern Roads Policy in 1983.

Native Training and Employment: This sub-activity is responsible for ensuring that the maximum native employment opportunities are provided in road construction and related projects. In addition, training opportunities and programs are provided by utilizing the services of the Canada Employment and Immigration Commission which has the responsibility for training natives in the North. This training will cover on the job training in the operation of equipment, construction management, catering and administration.

Other: The Activity include a proportionate share of Program management and support services costs and person-years (see page 3-40 under "Other").

Performance Information/Resource Justification

Road Construction and Maintenance: In accordance with the Northern Roads Policy and departmental objectives one of the principal aims of the roads program is to be an instrument to promote economic development. This takes into account the socio-economic needs and aspirations of native people and northerners by providing jobs and programs for training and direct entrepreneurial opportunities.

In addition to construction and reconstruction, road maintenance activities in both territories are monitored. Advice is given and recommendations are made to the Treasury Board of Canada regarding changes to the existing management system or requests for increases on planned expenditures. Responsibility for maintenance is retained for a period of one or two years after a road has been completed. Funds for this are included in the Operating and Maintenance budget.

Major capital projects account for 92% of the capital expenditure. During 1985-86 construction will continue on the Dempster Highway (km 0-671), Carcross Skagway (km 81-159), Mackenzie (km 0-83), Mackenzie (km 475-697) between Fort Simpson and Wrigley, and the North Canol Road. Community access roads will also incur capital expenditures.

The promotion of the development of community access roads and the provision of financial assistance to developers requiring road access to potential resource areas, results in the encouragement and promotion of the economic development of the North. It also provides road access to people living in remote areas thus enabling them to be able to participate more readily in employment opportunities and encourage entrepreneurial development.

Native Training and Employment: Construction activity in both territories will continue to provide improved access and will benefit the northern economy through the creation of job opportunities for natives and northerners and the provision of additional benefits to local entrepreneurs especially in the equipment rental, accommodation and supply fields.

During 1984-85, in order to increase the employment of local people, special hiring clauses were incorporated in tender packages. In addition, negotiations commenced with the Deh Cho Regional Council with regard to the training and employment of natives for the Mackenzie (Wrigley) project. As a result of the special hiring clauses, a significant number of jobs were made available to local residents.

In 1985-86 these hiring clauses will again be utilized. Meetings are also planned to encourage the two territorial governments to use the same type of hiring requirements.

Resources will again be used to support the development and implementation of native employment and training programs, e.g., Mackenzie (Wrigley) project where native contractors and workers will build the subgrade of the highway. The Canada Employment and Immigration Commission will work with the contractors to implement the training program. Special emphasis will be placed on preparing for certification those who have already received some training in road construction through Hire North. It is expected that by the end of this project in 1986-87 more than 300 natives will have benefited from employment and training and that 45 of them will have achieved certification.

F. Canada Oil and Gas Lands Administration (COGLA)

Objective

To ensure the vigorous and responsible development of oil and gas resources on Canada Lands.

Resource Summary

This Activity accounts for 7.6% of the total Northern Affairs Program expenditures and 14.2% of the total person-years.

Figure 25: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Policy	692	12	686	12	478	8

International	90	1	95	1	(5)	
Activity Management and Support	1,856	31	1,937	31	(81)	
Net activity expenditures (DIAND):	5,849	93	6,433	94	(584)	(1)

Variances were due primarily to two positions not being staffed ($100,000), two contracts concerning rig safety and diving regulations not materializing as anticipated ($350,000), and delays in research and development projects ($80,000).

Description

The Canada Oil and Gas Lands Administration (COGLA) is a shared responsibility of the Departments of Energy, Mines and Resources and Indian Affairs and Northern Development. With respect to specific regulatory responsibilities COGLA reports to the Deputy Minister (EMR) on activities south of a line of administrative convenience and to the Deputy Minister (INAC) on activities north of the line. Figure 27 provides a map of the Canada Lands and line of administrative convenience. Beyond the specific regulatory responsibilities there are policy issues of common interest to both parent departments. These are dealt with through the Policy Review Committee which is composed of senior members from both departments.

COGLA carries out four principal groups of activities. The first group relates to the negotiation, issuance and processing of oil and gas rights in Canada Lands and the negotiation and issuance of production licenses. With respect to the exploration phase, the activities include the issuance of calls for proposals to explore new lands and the subsequent negotiation of new Exploration Agreements (EA's). The EA's include a work plan and a Canada Benefits Plan which outlines how Canadian industry and labour will be given full and fair access to the benefits from oil and gas activities, and the opportunity for Canadian firms to supply goods and services related to these activities.

The second group relates to the regulation and monitoring of the operational, occupational and environmental safety of oil and gas activities. This includes writing regulations and standards, evaluating applications to carry out geophysical, drilling or research programs, imposing terms and conditions on operations, monitoring activities, preventing unsafe operations, entering and inspecting sites, and ensuring proper reporting. It also involves a series of approvals including a development plan approval, a production facility approval, a production structures approval, and, depending on the particular circumstances of the development, a launch approval, an installation approval, a transport approval, and a final certificate of fitness and production operations approval.

A third group of activities covers inter- and intra-governmental co-ordination. In its role as principal contact with the oil and gas industry, COGLA depends on the support and cooperation of many federal departments. COGLA also administers joint federal-provincial agreements and/or arrangements for offshore oil and gas activity, and provides the framework for federal and provincial officials to work together.

The fourth group can be termed support activities and includes the resource evaluation function, the provision of data to companies, institutions and individuals, and environmental and related engineering research functions. Resource evaluation provides an appraisal of oil and gas potential on Canada Lands necessary for assessing exploration activity, for determining work programs for exploration agreements, and for federal oil and gas supply forecasting. The geophysical and geological data that COGLA gathers for its own purposes is also made available to companies for operational applications and to the scientific community for research. Research and development projects directly support regulatory decision making described above in group two. The main research vehicle is the Environmental Studies Revolving Fund.

Figure 27: The Canada Lands

...Line of Administrative Convenience-Boundary Between EMR and DIAND

The Department has a broad mandate north of 60°, and EMR has a mandate for areas south of 60° and the offshore areas at the east and west coasts of Canada.

Performance Information/Resource Justification

In accordance with the Memorandum of Understanding between EMR and DIAND, the funding of COGLA is the joint responsibility of both Departments, subject to normal governmental controls and is reflected in the Estimates of both departments.

The table that follows summaries by sub-activity specific goals and significant planned outputs and results for 1985-86.

Sub-Activities Objectives	Resources $000	P/Y	Goals	Significant Planned Outputs and Results for FY 1985/86
Policy Determine and direct the pace, level and pattern of exploration, development and production that best contribute to meeting national energy, northern and economic development policy goals	692	12	- Review, develop and implement policies and strategies for the Canada Oil and Gas Resources management regime - Determine lands for issuance and negotiate and issue Exploration Agreements - Develop a resource management regime for non-fuel ocean minerals - Provide public information on federal oil and gas resource management on Canada Lands	- Develop a new 'Lands Policy' - Let 3 to 5 Calls for Proposals and negotiate 10 to 15 Exploration Agreements - Prepare a policy paper on offshore non-fuel minerals regime and initiate consultation with coastal provinces on an offshore non-fuel mineral regime - Issue 125 press releases and hold 10 major press conferences
Coordination Ensure that inter-governmental and interdepartmental oil and gas resource management agreements and arrangements are in place and properly executed and CDGLA is the principal point of contact for the oil and gas industry on Canada lands matters	866	18	- Promote federal/provincial/territorial cooperative arrangement for resource management - Implement, administer and monitor joint intergovernmental cooperative resource management agreements - Establish and administer consulting arrangements to coordinate inter-departmental interests in resource management decisions - Ensure industry receives consistent direction in meeting regulatory requirements	- Negotiate one or possibly two federal/provincial agreements for joint offshore oil and gas resource management - Complete implementation of one Federal-Provincial Agreement and implement a second Agreement - Review consultative arrangements with CCG, DRIE, DFO, DOE, CEIC and Labour and strengthen as necessary - Strengthen CDGLA coordination function in the Territories

Sub-Activities Objectives	Resources $000	P/Y	Goals	Significant Planned Outputs and Results for FY 1985/86
Safety Promote an effective operational and occupational safety regime.	4847	57	- Provide state-of-the-art engineering and environmental regulations, standards and guidelines for operational and occupational safety - Review and approve proposed equipment, facilities, and work practices for drilling, seismic, research and production programs - Monitor daily drilling, production, seismic and research activities and associated environmental conditions - Inspect oil and gas facilities and operations - Maintain an effective, comprehensive emergency regime	- Issue new Structures and Production Facilities Regulations and Drilling Safety and Training guidelines - Certify 5 drilling units and 10-15 supply boats - Evaluate 25-35 drilling programs and issue 40 Authorities to Drill a Well - Carry out 400-500 inspections of drilling units - Monitor 30 daily drilling reports and 100 seismic surveys - Monitor daily storm/sea state conditions for 20-25 drilling units - Complete review of three development plans - Review 12 emergency contingency plans from safety viewpoint

Sub-Activities Objectives	Resources $000	P/Y	Goals	Significant Planned Outputs and Results for FY 1985/86
Canada Benefits. Foster full and fair access by Canadians to participate in and realize the greatest possible benefits from Canada Lands oil and gas activities	1039	17	- Assess appropriateness of oil industry activities in ensuring Canadians have full and fair access to Canada Lands opportunities - Foster cooperation between Canadian suppliers and oil industry to expand capabilities of Canadian firms to provide goods and services - Encourage expanded capabilities of Canadian operators to participate on Canada Lands - Ensure adequate public review of socio-economic and industrial impact of major oil and gas activities	- Assess 50-70 Canada Benefits packages and assess 20-30 Annual Canada Benefits Reports - Monitor employment practices of 10-12 operators - Review 600-700 designated items - Determine specific supplier development strategy and special affirmative action strategy - Review Hibernia Development Plan Proposal and socio-economic impact statement

Sub-Activities Objectives	Resources $000	P/Y	Goals	Significant Planned Outputs and Results for FY 1985/86
Environmental Protection Protect the environment to the maximum feasible extent and provide an effective and efficient emergency counter measures regime.	1731	15	- Define and set environmental terms and conditions, for all exploration and production rights proposals - Provide state-of-the-art environmental and engineering regulations, standards and guidelines for environmental protection - Review and approve proposed equipment, facilities and work practices for drilling, seismic research and production programs - Maintain an effective, comprehensive emergency measures regime - Ensure adequate public review of environmental impact of major oil and gas activities	- Provide environmental input for Structures and Production Facilities Regulations and Drilling Guidelines - Participates in panel review of West Coast moratorium - Development of guidelines for Calls for Proposals, environmental monitoring and well site abandonment - Assess 25-35 drilling programs and 40 Proposals for an Authority to Drill a Well - Review and approve 12 contingency plans and conduct 2 major emergency exercises - Review environmental impact statement for Hibernia

Sub-Activities Objectives	Resources $000	P/Y	Goals	Significant Planned Outputs and Results for FY 1985/86
Research and Development Support and promote the knowledge base required for regulatory approvals of oil and gas activities for industry decisions and for strengthening Canada's high technology capability	1806	14	- Ensure the Environmental Studies Revolving Fund provides the data and research base necessary for oil and gas activity approvals - Ensure the marine engineering R&D program supports regulatory needs and/or promotes Canadian technological development - Promote with operators and the supply community the development of Canadian oil and gas technologies and joint initiatives to transfer and share technology from other countries - Maintain the Canada Lands data bases and mineral samples required by the oil and gas industry and its supporting services firms	- Publish 15-25 ESRF reports - Review ESRF program achievements - Complete 3-4 marine engineering studies on structural monitoring, diving and safety - Identify R&D opportunities under Canada Benefits plans and Venture and Hibernia development plans - Fill 2500 requests for data or advice
Rights and Revenues Administration Manage and control the rights administration functions to ensure companies obligations are met and revenues are collected	1558	26	- Promulgate royalty and rights regulations pursuant to the Canada Oil and Gas Act - Manage the renegotiation of Exploration Agreements and the relinquishment of lands - Administer Exploration Agreements (EA's) in force including the registration and transfer of interests and the monitoring of work commitments - Ensure the full and prompt collection of revenues	- Administer 160-180 EAs, renegotiate 17 EAs and implement relinquishment procedures for 72 EAs - Collect $10M in revenue - Establish the registry of interests - Develop royalty regulations

Sub-Activities Objectives	Resources $000	P/Y	Goals	Significant Planned Outputs and Results for FY 1985/86
Resource Evaluation & Conservation Provide a sound basis for COGLA's resource management, policy, negotiations, administration and conservation responsibilities through competent evaluation of oil and gas reserves and potential.	2597	36	- Evaluate oil and gas potential on Canada Lands - Recommend exploration strategies to expand knowledge of reserves - Develop and maintain data bases for tracking potential and reserves on Canada Lands - Assess and approve reservoir extraction plans	- Contribute Canada Lands portion of National Hydrocarbon Inventory - Provide regional assessment for 4 areas - Review and analyse 14 significant discoveries - Process data, cores and cuttings for 40 wells and reservoir logs for 40 wells - Review 30 to 35 reservoir test programs for individual wells - Review extraction plan for one major field
International Provide professional advice on offshore boundary issues and resource management regimes	173	3	- Provide expert technical advice and testimony on international seabed resource management regimes and boundary issues - Promote international offshore comprehensive emergency planning for cross boundary accidents - Provide information and data on Canada Lands activity and the Canadian land management regime to foreign companies, academics and agencies	- Advise on offshore boundary disputes involving St. Pierre et Miquelon, Beaufort Sea, Dixon Entrance and Juan de Fuca Strait - Hold or participate in one bilateral offshore emergency exercise - Fill 100 information requests from outside Canada

Section III
Supplementary Information

A. Analysis by Object

The Northern Affairs Program's expenditures for 1985-86 are $128,122,000 and are presented in Figure 28.

1. Expenditures by Object

Figure 28: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	32,631	30,547	28,519
Contributions to employee benefit plans	4,572	3,938	4,132
Other	3,000	2,476	2,720
Goods and services

All other expenditures	101	651	126
Total operating	76,859	76,313	74,259

Figure 28: Expenditures by Object ($000) (Cont'd)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Capital			
Construction and acquisition of Land, Buildings and Works	18,474	22,308	20,162
Construction and acquisition of machinery and equipment	2,673	4,408	2,690
Transfer Payments	26,845	43,850	36,065
Total expenditures*	124,851	146,879	133,176

2. Personnel Expenditures

The Northern Affairs Program's personnel costs of $40,452,000 account for 31.6% of the total operating expenditures. This includes statutory contributions to employee benefit plans.

Figure 29 provides a breakdown of personnel by activity, and Figure 30 shows the person-years and annual average salary by category.

*Note: These figures do not include expenditures for the Environmental Studies Revolving Fund.

Figure 29: Person-Year Requirements by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Northern Co-ordination and Social Development	89	96	90
Northern Economic Planning	52	48	47
Northern Environmental Protection and Renewable Resources	464	452	450
Northern Non-Renewable Resources	126	127	134
Northern Roads	12	14	17
COGLA	123	121	93
Authorized person-years*	866	858	831

* This does not include 4 P/Ys for the Environmental Studies Revolving Fund.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

NWT Government, for road reconstruction			3,609
Environmental Studies Revolving Fund			
Research Agreements	2,900		
Total, Grants and Contributions	29,745	43,850	36,065

B. Cost Analysis

The Northern Affairs Program's 1985-86 Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items as well as revenue must also be included when considering the actual costs to operate the Program.

Figure 34: Program Costs ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Revenue	Net Cost	Total 1984-85
Activity						
Northern Co-ordination and Social Development	27,974	1,971	29,945	(2,750)	27,195	34,345
Northern Economic Planning	6,555	1,307	7,862		7,862	18,114
Northern Environmental Protection and Renewable Resources	49,547	10,518	60,065	(396)	59,669	58,981
Northern Non-Renewable Resources	13,045	2,680	15,725	(2,275)	13,450	13,809
Northern Roads	18,267	266	18,533		18,533	23,518
COGLA	9,463	2,724	12,187	(1,300)	10,887	10,425
Environmental Studies Revolving Fund	3,271	111	3,382	(385)	2,997	214
	128,122	19,577	147,699	(7,106)	140,593	159,406

The adjustments made to the estimated operating expenditures to arrive at a total net cost include accommodation provided without charge by Public Works Canada and other services provided without charge by other departments and inclusion of all revenues generated by the Program.

C. Additional Information

1. Acts Administered in Whole or in Part

The legal mandate of the Northern Affairs Program is derived from the following legislation:

Department of Indian Affairs and Northern Development Act, 1970
Yukon Act
Northwest Territories Act
Territoral Lands Act
Land Titles Act
Public Lands Grants Acts
Canada Lands Surveys Act, Part III
Northern Inland Waters Act
Arctic Waters Pollution Prevention Act
Dominion Water Power Act
Oil and Gas Production and Conservation Act
Yukon Placer Mining Act
Yukon Quartz Mining Act
Northern Canada Power Commission Act
Territorial Supreme Courts Act
Canada Oil and Gas Act

2. Schedule of Revenues

Figure 35 illustrates the sources of revenue for the Northern Affairs Program.

Figure 35: Schedule of Revenues ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Total Program	445,586	461,993	461,993

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- The Transfer Payments to the Territorial Governments Program is presented as a separate program for the first time in the 1985-86 Estimates. (see page 4-15)

- It is planned that the level of grants to each territory will be determined, starting in 1985-86, through an objective and long term formula, replacing the previous process of annually negotiated grants (See page 4-12).

2. Financial Summary

Figure 1: Financial Summary

	Estimates 1985-86	Forecast 1984-85	Change	For Detail See Page
Grants to Yukon	138,000	111,525	26,475	4-14
Grants to NWT	440,000	389,827	50,173	4-14
	578,000	501,352	76,648	

The Northern Affairs Program provides the person-years to support this Program. The increase in the 1985-86 requirements over the 1984-85 forecast of $76,648 million results mainly from the following:

a) An escalator based on a three year moving average of the annual growth rate of provincial-local expenditures effectively transfers to the Territorial Government the benefits accompanying the high provincial-local growth rates of recent years.

b) The application of an escalator to capital in the 1982-83 base year effectively produces a higher 1985-86 capital funding level under the formula than would be the case under the existing process.

c) The provincial-local escalator, in effect, covers funding for provincial initiatives whereas the existing funding process for the Territories does not.

Grants to Yukon and NWT represent 23.9% and 76.1% of total program expenditures, respectively.

B. Recent Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Grants to Yukon	105,790	99,593	6,197
Grants to NWT	356,203	345,993	10,210
	461,993	445,586	16,407

Explanation of Change: The difference between actual expenditures and the Main Estimates of $16,407 is attributable to the following items approved by Supplementary Estimates:

	$000
Government of the Northwest Territories:	
• Increased health care costs	7,800
• Compensation for an overestimation of Established Program Financing and income taxes	2,350
• Transfer of Mining Engineering from Northern Affairs Program	60
	10,210
• Government of the Yukon Territory:	
• Increase to the Operating Grant to cover increased costs in the areas of program standards and machinery of government	5,797
• Compensation for an overestimation of the Established Programs Financing	400
	6,197

C. Background

1. Introduction

The Transfer Payments to the Territorial Governments Program is the responsibility of the Minister of Indian Affairs and Northern Development through the Northern Affairs Program.

The Program was previously presented in Part III of the Estimates within the Northern Co-ordination and Social Development Activity of the Northern Affairs Program. The change is required to highlight the magnitude of the financial resources involved and to provide an appropriate level of disclosure. The Program is designed to provide a record of the transfer of non-conditional grants to assist the territorial governments in the provision of a full range of public service for territorial residents. The Program represents 24.8% of 1985-86 expenditures of the Department.

The territorial governments, seated at Whitehorse, Yukon, and Yellowknife, NWT, possess legislative and executive powers under the federal Yukon and Northwest Territories Acts. Those powers are similar to those of the provinces, except that the federal government maintains ownership and management of resources (except game) and power to amend territorial constitutions. In Yukon, which has progressed to virtually complete responsible government within its jurisdiction, a political party system electing 16 members is in place, and a fully elected Executive Council operates the government. The Commissioner's role is analagous to that of a provincial Lieutenant-Governor. In the NWT, where a concensus approach to decision making is more favoured, political parties have yet to emerge. The Executive Council of the NWT is appointed by the Commissioner on the recommendation of all 25 elected members.

Because the population of the territories (NWT - 49,000, Yukon - 21,000) is small and sparsely distributed over approximately 40% of Canada's land mass, and because of the severity of the climate, the costs incurred in providing government services are generally very high relative to those in the provinces. The two parallel and distinct economies, one operating on a modern industrial commercial basis, and the other a traditional, land based, hunting, fishing and trapping economy, are unable to generate tax revenues sufficient to cover more than a portion of the costs of government services.

2. Legal Mandate

The legal mandate of the Minister of Indian Affairs and Northern Development for the Transfer Payments to Territories Program is derived from the Department of Indian Affairs and Northern Development Act 1970. Authority for transfers is contained in annual Appropriation Acts.

3. Program Objective

The objective of the Transfer Payments to the Territorial Governments Program is to transfer funds to the territorial governments in accordance with agreements entered into by the Minister of Finance with the approval of the Governor in Council on behalf of the Government of Canada and the Commissioners of the Yukon and Northwest Territories on behalf of their respective governments.

4. Program Organization for Delivery

Activity Structure: The Program has one activity for planning and administration of transfers, and two sub-activities, one per territory.

Figure 3: Activity Structure

Organization Structure: The Program has no person-years and utilizes the staff resources of the Northern Affairs Program of the Department of Indian Affairs and Northern Development.

5. Program Description

Within their jurisdiction, the territorial governments are able to obtain limited revenues, from personal and corporate income taxes, various licence fees and taxes on fuel, liquor, tobacco and property. Only a portion of the total funds necessary to carry out territorial responsibilities is available, as shown in Figure 4.

Figure 4: Sources of Funding for Territorial Expenditures ($000)

	1983-84 Actual		1982-83 Actual		1981-82 Actual		1980-81 Actual	
	Yukon	NWT	Yukon	NWT	Yukon	NWT	Yukon	NWT
Own territorial revenue	81,480	170,227	53,764	151,027	60,925	146,246	42,820	118,347
Federal grants	103,624	345,993	76,105	311,087	55,679	258,718	51,450	216,680
Total Revenues	184,744	516,220	129,869	462,114	116,604	404,964	94,270	335,027

Note: These figures are derived from Territorial accounts which are maintained on an accrual basis

Government policy on northern constitutional development emphasizes that responsible government for the territories is an objective of the Government of Canada. Political development is now such that, in practice, the Territorial Executive Councils are accountable to legislatures which, in turn, are accountable to the northern electorate. Mechanisms for financial accountability are in place. Government of Canada accountability for transferred funds is exercised through approval of financial agreements which determine funding levels, approval of commercial borrowing beyond prescribed limits, approval of the schedule for grant disbursements, reserve powers to disallow territorial ordinances, and annual audits on behalf of the territories by the Auditor General of Canada.

D. Planning Perspective

1. Environment

Political Climate: In November, 1982, the Government of Canada accepted the principal of division of the NWT into two geographic units, subject to specified conditions. The financial requirements of any new territories will likely be different from the existing NWT, and, should division occur during the term of a financial agreement, it will automatically terminate. Depending on the political and administrative structures and the resource needs of the new territories, new transfer of funds arrangements will have to be derived.

Economic Climate: The grant levels are influenced by the amount of territorial self-generated revenues and the spending patterns of other provincial and municipal government institutions.

2. Initiatives

Commencing in 1985-86 it is planned that the Transfer Payments to the Territorial Governments Program will be operated, for a trial period, on a formula basis in lieu of the former process of annually negotiated grants. The trial period will endure for three years to permit a meaningful experimentation period and to assess effectiveness. The formula will be incorporated into a financial agreement with each territory. The agreements will be renewable for a further two years, on agreement by both parties.

3. Update on Previously Reported Initiatives

There were no initiatives reported for 1983-84.

4. Resourcing Formula

The funding level determination process has changed from one of negotiation between federal and territorial officials leading to the determination of annual operating grants to a more global formula based funding approach. The formula and operating procedures are intended to produce a grant which would be equal to base period revenues, escalated by the growth rate of provincial/local government expenditures, minus actual territorial revenues at base period tax rate in effect on implementation. The grants produced by the formula are expected to cover all normal operational requirements. The territorial governments are to present, annually, updated five year capital plan forecasts and status reports in order to monitor territorial capital programs.

5. Program Effectiveness

The objective of the Program will be achieved if the formula used to determine levels of annual transfer payments, and if negotiations to deal with special categories, are successful in meeting the funding requirements of the two territorial governments. Implementation of the formula approach will be closely monitored by the Department and a review completed prior to commencement of a fourth year (1988-89).

Section II
Supplementary Information

A. Transfer Payments

The Transfer Payments to the Territorial Governments Program expenditures for 1985-86 are $578,000,000 in the form of non-accountable grants.

Figure 5: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Yukon			
Operating	138,000	83,402	79,006
Capital		28,123	26,784
NWT			
Operating	440,000	306,348	276,639
Capital		83,479	79,564
	578,000	501,352	461,993

For fiscal 1985-86, total grants for each region have been negotiated for both operating and capital.

B. Other Information

Transfer Payments to the Territorial Governments were presented in previous Part III's in the Northern Coordination and Social Development Activity, Transfer Payments to the Territorial Governments Sub-Activity, of the Northern Affairs Program.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- Agreements-in-principle are presently being negotiated on five comprehensive claims, at least one of which is expected to be signed in 1985-86. With the recent conclusion of the Inuvialuit Final Agreement on the Western Artic (Inuvialuit) claim it is anticipated that negotiations will begin on one new comprehensive claim (see page 5-23);

- Negotiations on some 83 specific claims are being pursued with the claimant bands. It is anticipated that 20 to 30 of these will be settled during 1985-86. In addition, another 30 to 35 will be assessed as to their acceptance for négotiations (see page 5-23);

- Claims settlement compensation payments in the amount of $1 million will be made in 1985-86 under the terms of previously negotiated claims settlement agreements;

- Grants in the amount of $11,831 million will be given to the Cree and Naskapi bands to support the operation of their local administration under the Cree/Naskapi (of Quebec) Act (see page 5-32);

- Contributions amounting to approximately $4,529 million will be made to some 22 associations for the identification and establishment of claims (see page 5-24); and

- There will be $14,303 million loaned to native claimants for the further development and negotiation of accepted claims leading to claims settlements. Loan amounts of $1 million will be repaid by native claimants from the proceeds of claim settlement compensation (see page 5-24).

- Up to $30 million may be borrowed in 1985-86 by the Committee for Original Peoples Entitlement (COPE) under the terms of the Inuvialuit Final Agreement (see page 5-30).

2. Financial Summary by Activity

The Program's activity structure has been modified in 1985-86 with the Claims Negotiation Activity moving from the Administration Program to the Native Claims Program. The Establishment of Claims and Claims Research, Development and Negotiation Activities have been combined to form the Funding of Native Claimants Activity. (Refer to Section III, Supplementary Information, page 5-37).

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See page
Claims Negotiation	4,528	4,284	244	5-20
Funding of Native Claimants	19,037	19,000	37	5-24
Settlements	43,952	42,073	1,879	5-30
	67,517	65,357	2,160	
Authorized person-years	67	67	-	

Explanation of change: The 1985-86 expenditures of $ 67,517,000 represent an increase of $ 2,160,000 or 3.3% from 1984-85 forecasts. The increase in Forecast 1984-85 over Main Estimates 1984-85 is attributable to amounts in Supplementary Estimates B 1984-85. These include Grants to the Inuvialuit Development Corporation ($17,500,000) for the Economic Enhancement and Inuvialuit Social Development Funds and Grants to the James Bay Cree and Naskapi Bands Corporations of Québec in respect of the Cree-Naskapi Act ($19,052,000).

Figure 2: Gross Expenditure by Activity (Percentage Distribution 1985-86)

Figure 3: 1985-86 Distribution of Gross Expenditure by Object

B. Recent Performance

1. Highlights

In the area of comprehensive claims, a final agreement was signed between the Committee for Original Peoples' Entitlement (COPE) and the federal government on June 5, 1984. The Western Arctic (Invialuit) Claims Settlement Act, giving effect to the COPE Agreement, was passed by Parliament in June and proclaimed into force on July 25, 1984. A secretariat in charge of coordinating the implementation of the Agreement was subsequently established under the Departmental Administration Program. An Agreement-in-principle with the Council for Yukon Indians, which was accepted by the government in March, 1984, remains to be ratified by the native Yukon beneficiaries.

The James Bay and Northern Quebec Agreement and the Northeastern Quebec Agreement required passage of the Cree/Naskapi Act (July 1984) allowing for local government for the James Bay Crees and the Naskapi of Shefferville on certain lands allocated to them under the agreements. This Act replaces the Indian Act in respect of these lands. Funding under the new Act is in the form of a grant to reflect the greater local government autonomy established by this recent legislation.

Progress in the settlement of specific claims (see page 5-18) was also achieved. On April 5, 1984 the Long Lac claim in Ontario was settled and compensation of $192,466 paid. On April 6, 1984 the Blackfoot Cattle Claim was settled and a payment of $1,675,000 was made to the band. Later in the spring, Cabinet authority was obtained to pay $4,830,000 to the Peigan band in Alberta to settle its 1909 surrender claim. An Agreement-in-principle was reached with the Cree Chip band in northern Alberta to settle its treaty/and entitlement claims. Band and Cabinet ratifications will be sought. In Saskatchewan the Whitebear claim was settled in late July and band and Cabinet ratifications will be sought. In late August, 1984 an Agreement-in-principle was reached between the Manitoba government and a representative committee of Manitoba Chiefs to settle outstanding treaty land entitlements in that province. Final settlements on the cut-off land claims in British Columbia were also achieved with the Chemainus and Becher Bay Bands in June and October 1984 respectively.*

* The term "cut-off lands" refers to claims by 22 bands concerning 34 reserves which were reduced in acreage in the 1920's pursuant to federal and provincial legislation. The affected bands never accepted these reductions because Indian consent was not obtained. In 1976 British Columbia and the Government of Canada agreed to negotiate settlements of these claims.

2. Review of Financial Performance

Figure 4: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates*	Change
Claims Negotiation	4,166	4,166	-
Funding of Native Claimants	18,613	18,192	421
Settlements	16,404	2,348	14,056
	39,183	24,706	14,477
Authorized person-years	67	67	-

* The Main Estimates figures have been restated to conform with the revised break out by activity adopted for 1985-86. Note that 1983-84 Main Estimates have been further restated to reflect a transfer of operating expenditures from the Administration Program in 1985-86 ($4,326,000).

Explanation of Change: The difference between actual expenditures and the Main Estimates results from increased requirements approved through Supplementary Estimates ($19,244,660) which were not entirely spent. Items in the Supplementary Estimates were all Grants to Indian bands for specific land claims.

C. Background

1. Introduction

The Program was introduced in 1978 to deal with the increasing number of native claims being presented to the federal government. Since 1973 two types of claims have been recognized. Specific Claims relate to the fulfillment of outstanding treaty obligations and the actual administration of Indian assets specified under the Indian Act or formal agreements. Comprehensive Claims relate to the loss of traditional use and occupancy of land and the special relationship that the native people have had with the land since time immemorial. The settlement of comprehensive claims is based on criteria such as the protection of hunting, fishing and trapping rights, land title, money, as well as other rights and benefits, in exchange for a release of the general and undefined native title.

The Office of Native Claims (ONC), as a component of the Native Claims Program, is responsible for coordinating the assessment of claims and for conducting negotiations on accepted claims on behalf of the Minister of the Department and the Government of Canada. Following an initial analysis and further research to determine the historical facts, a formal submission of all related documentation is made to the Department of Justice for an opinion on the legal merits of the claim. Accepted claims are referred by the Minister to the Office of Native Claims which officially represents the federal government in negotiating a settlement agreement with the affected Indian or Inuit claimant group. Once a final settlement has been agreed to by all parties, the comprehensive claims process entails seeking approval by Cabinet and passage of binding legislation by Parliament. Specific claims agreements are implemented on the authority of Cabinet and/or Treasury Board in accordance with government policy (see Section II.A, page 5-22).

The Corporate Policy Sector administers the provision of financial support to native claimants. This support enables Indian and Inuit people to participate on an equitable basis with the government in the claims resolution process and takes the form of contributions and loans. Contributions permit initial research, development and submission of specific and comprehensive claims whereas loans are provided to further develop and negotiate accepted claims (see Section II.B page 5-25). Corporate Policy also maintains program responsibility for the payment of the agreed cash compensation to native claimants under the agreements-in-principle and final settlement agreements and administers under the Departmental Administration Program two claims implementation secretariats - one for the James Bay and Northern Quebec Agreement and the Northeastern Quebec Agreement and the other for the Inuvialuit Final Agreement.

2. Legal Mandate

The establishment of a separate Native Claims Program was authorized by The Government of Canada on November 16, 1978 (TB 760824) and provided program funding through the 1979-80 Main Estimates.

3. Program Objective

To settle accepted native claims through negotiation.

4. Program Organization for Delivery

Activity Structure: The Native Claims Program consists of three activities as shown in Figure 5. As described in Section A.II on page 5-10, the 1985-86 Native Claims activity structure has been modified in order to group all related functions under one program. (Refer to Section III, Supplementary Information, page 5-37).

Figure 5: Activity Structure

Organization Structure: Overall responsibility for the Program is shared between the ADM, Native Claims and the ADM, Corporate Policy. The ADM, Native Claims, has specific accountability for the Claims Negotiation Activity which is administered by the Office of Native Claims (ONC). ONC co-ordinates the government's responses to submitted claims, negotiates claims settlements and advises the Minister on the further development of claims policy. The ADM, Corporate Policy, is accountable for the two remaining activities, Funding of Native Claimants and Settlements. These activities include the provision of claimant funding for research and negotiation, making financial compensation payments on all claim settlements and coordinating the implementation of settled comprehensive claims agreements. Both ADMs report to the Department's Deputy Minister.

The division of responsibilities between ONC and Corporate Policy has been undertaken to ensure a clear separation of interest between the organization representing the federal government in the negotiation process and the group which provides funding to the native peoples and oversees the implementation of settled claims.

The Program essentially operates on a centralized basis with the majority of staff located at the national headquarters offices in the National Capital Region. However, since 1981 the Office of Native Claims has maintained an office in Vancouver to address claims occurring in British Columbia.

Figure 6 illustrates the Program's organizational structure and resource allocation.

Figure 6: 1985-86 Resources by Organization/Activity ($000)

Settlements	-	-	43,952	-
	4,528	63	62,989	4

D. Planning Perspective

1. Environment

Historical Perspective: The issue of native claims recognition and resolution is a relatively recent development within the federal government and has resulted in the Program being active in the area of policy evolution. For instance, the provision of funds to support the research of Indian rights and treaties and the development of claims by native groups can be traced back just 15 years to 1970 and the Indian Act revision discussions. The first statement describing government policy respecting native claims was announced in 1973 and was rearticulated in 1981 and 1982 with the publication of separate policy booklets for comprehensive (In All Fairness) and specific (Outstanding Business) claims. The Office of Native Claims was established in 1974 with Indian and Northern Affairs Canada being given authority to enter into discussions and negotiations with native associations concerning their claims.

Growth in Claimant Funding: Administered first by the Privy Council Office and later by the Department, the Program's funding responsibilities have expanded significantly. In the form of accountable contributions, the Department has provided about $35 million in the past 13 years for research into Indian and Inuit rights, treaties and claims. Another $99 million was provided to native claimants in the form of recoverable loans between 1974 and 1985.

In response to a pressing need to resolve native claims, an increment in available funds for native associations was approved by the Government of Canada in the fiscal year 1982-83. Accountable contributions available to native associations increased to $3.7 million and the loan budget increased by $5.9 million to a total of $14.3 million. A further $800,000 in contributions was granted during the 1983-84 fiscal year.

Number of Comprehensive Claims under Negotiation: At present only six comprehensive claims are engaged in negotiations at one time. With the completion of the Inuvialuit Final Agreement with the Committee for Original Peoples' Entitlement (COPE), five claims are still in active negotiation; the Nishga Tribal Council (NTC) in B.C.; the Council for Yukon Indians (CYI) in Yukon; the Dene/Métis in the Mackenzie Valley of the Northwest Territories; the Tungavik Federation of Nunavut (TFN) representing the Inuit in the Central and Eastern Arctic of the NWT; and the Couseil Attikamek - Montagnais (CAM) representing the Montagnais on the North Shore of Quebec and the Attikamek of the upper St. Maurice River area.

2. Initiatives

Due to the nature of this Program no new initiatives are planned for 1985-86.

3. Update on Previously Reported Initiatives

The Program did not report any initiatives in the 1983-84 expenditure plan.

4. Program Effectiveness

The best measure of activity effectiveness is the number of claims that are actually settled (see Figure 7).

Figure 7: Claims Settlements with Cash Compensation (from 1974 to 1984)

Comprehensive Claims	Settlement Date	($)
James Bay Crees and Inuit of Northern Quebec (James Bay and Northern Quebec Agreement)	Nov. 1975	$32,750,000
Naskapis of Schefferville (Northeastern Quebec Agreement)	Jan. 1978	1,310,000
Committee for Original Peoples' Entitlement (Inuvialuit Final Agreement)	June 1984	152,000,000
Specific Claims*		
Batchewana Band	Oct. 1974	65,000
Treaty #7 Bands	Oct. 1974	250,000
Osnaburgh Band	Dec. 1975	16,000
Canoe Lake Band	Sept 1976	4,366
Nikaneet Band	Sept 1976	Annuities
Kitsumkalum Band	Sept 1976	9,357
Wagmatcook Band	Mar. 1982	1,200,000
Penticton Band	Mar. 1982	13,217,119
Osoyoos Band	Nov. 1982	634,908
Clinton Band	Mar. 1983	140,000
Oromocto Band	July 1983	2,550,000
Westbank Band	Nov. 1983	7,187,584
Okanagan Band	Dec. 1983	1,548,612
Squamish Band	Dec. 1983	958,320

Comprehensive Claims	Settlement Date	($)
Long Lac Band	Apr. 1984	192,466
Blackfoot Band	Apr. 1984	1,675,000
Chemainus Band	June 1984	641,700
Becher Bay Band	Oct. 1984	200,000
		$216,550,432

* In addition to the claims listed, two other specific claim settlements have received government approval and are awaiting ratification by the Band:

Garden River Band - $2,500,000
Peigan Band - $4,830,000

The Program recently undertook an Evaluation Study of the comprehensive claims process to determine the extent to which it allows for the achievement of stated objectives and goals, is satisfactory to the claimant groups and is cost-effective. The study concluded a number of process improvements are required in the areas of liaison with claimants and third party interests, analysis of the cost of overall economic impact of potential settlement, resolution of overlapping claims at an early stage in negotiation, acceleration of the negotiating process and implementation of approved settlements. The program is pursuing these issues.

Section II
Analysis By Activity

A. Claims Negotiation

Objective

To ensure the efficient and timely resolution of native claims through a negotiation process, in accordance with government policy and in the interests of all involved and affected parties.

Resource Summary

This activity accounts for approximately 6.7% of total Native Claims Program expenditures and 94.0% of total person-years.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Research*	2,741	44	2,592	44	2,520	44
Negotiation	1,787	19	1,692	19	1,646	19
	4,528	63	4,284	63	4,166	63

Of total expenditures in this activity 65.2% relate to personnel costs and 34.8% to other operating.

* Includes costs for the ADM's Office, Native Claims.

Past Financial Performance

Figure 9: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y

Negotiation	1,646	19	1,646	19	-	-
	4,166	63	4,166	63	-	-

Description

This Activity is the responsibility of the ADM, Native Claims, and is administered through the Office of Native Claims (ONC) which serves as the official representative of the Minister and the Government of Canada in all claims negotiations undertaken with Indian and Inuit claimant groups or their representatives.

The two sub-activities which comprise Claims Negotiations are:

Research: The Office of Native Claims is responsible for the receipt of all specific and comprehensive claims (as defined in Section I, Program Overview, page 5-14) submitted by native groups. It conducts a thorough analysis of the historical and factual elements of all supporting evidence submitted by the claimants. As well, ONC conducts further research, as required, to obtain other pertinent documentation which may have a bearing on the claim. ONC may also seek meetings with the claimant to clarify points of concern. The above investigations are undertaken to determine whether the claim meets established acceptance criteria which would allow it to be recognized as a legally valid claim for which compensation should be negotiated.

A synopis of the claim together with supporting documentation is then forwarded to the Department of Justice for a ruling on the legal merits of the claim. Based on the Justice opinion, an official response by the Minister, on behalf of the federal government, is formulated. Recommendations are made for the further development of claims policy. Where findings do not substantiate the claim, the

claimant is provided with an explanation and supporting documentation and is advised of the government's willingness to review the case at a later date on the basis of new evidence. Where a claim is felt to be substantiated, ONC is authorized to proceed to negotiate a settlement.

Negotiation: This sub-activity's main responsibility is to negotiate a settlement with the claimant which is fair, equitable and agreeable to all parties. Negotiations are conducted either by ONC staff or in certain cases through negotiators from outside the Public Service who are appointed by the Minister in conjunction with ONC. The process involves detailed discussions with claimant groups on a range of issues, with other federal departments participating in the preparation and presentation of positions in accordance with their jurisdictional responsibilities. The negotiation of equitable comprehensive claim settlements in the south requires the direct participation of the provinces, given their jurisdiction over the land and resources. In the north, provision is made for the participation and involvement of the territorial governments.

Once final agreement has been reached Cabinet and/or Treasury Board, authority is sought by the Office of Native Claims to accept the settlement on behalf of the Government of Canada, and to provide the required financial resources for settlement compensation through Supplementary Estimates.

The significance of a claim settlement is that it represents final redress of the particular grievance dealt with since a formal release is obtained from the claimants so that negotiations on the same claim cannot be reopened at some time in the future.

Performance Information/Resource Justification

Functions performed by this Activity include the research and negotiation of native claims and the provision of analytical support and advice to federal negotiators. As described in Figures 10 and 11 the prime outputs of the activity are therefore the number of claims assessed, accepted or rejected for negotiation and the number of agreements-in-principle reached on portions or on the totality of claims. As the number and complexity of claims submitted increase (this trend is anticipated to continue particularly in the Specific Claims area), the level of resources needed to assess those claims, to clarify the government's legal obligations and protect its interests, and to negotiate and implement a settlement is also expected to rise, as is the level of resources needed to administer funding of native claimant participation in the negotiation process.

Figure 10: Status of Claim Settlements

B. Funding of Native Claimants

Objective

To ensure native claimants have access to resources to research and develop specific and comprehensive claims and to negotiate settlements.

Resource Summary

This Activity accounts for approximately 28.2% of total Native Claims Program expenditures and 6.0% of total person-years.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

	18,613	4	18,192	4	421	-

Description

This Activity is administered by the Corporate Policy Sector. Its role is to provide native claimants with financial assistance to enable them to participate on an equitable basis with the federal government, represented in negotiations by the Office of Native Claims (ONC) in the claims resolution process. The claims funding process (see Figure 14) is intended to fully complement the claims negotiation process which is described on pages 5-21 to 5-22 of Section II.A.

Two types of funding exist and are provided in accordance with Treasury Board-approved terms, conditions and guidelines. Contributions are funds which are provided for the initial research, development and submission of specific and comprehensive claims (defined on page 5-14). Loans are funds which are provided to permit the further development and negotiation of accepted claims.

*Includes funding administration costs for the entire activity

The two sub-activities which comprise Funding of Native Claimants are :

Establishment of Claims : Contributions are arranged with the native association, pursuant to the terms of the Claims Research and Development program, to enable them to conduct claims research on behalf of their member bands. Once a research workplan has been accepted by Corporate Policy and the amount of money allocated, a Contribution Agreement is signed by both parties. The Agreement specifies the total funds to be provided in a fiscal year, a schedule of payments, and the requirement to maintain a separate account for the funds received. It also requires the recipients to submit quarterly activity reports and financial statements, plus an annual consolidated audited financial statement.

After claims research and consultation has been completed, the native association provides a final report to the band or bands involved in the claim. It then becomes the responsibility of the band(s) to submit their claim to the federal government. Often, research findings will reveal that no basis for a claim exists or alternatively will identify the possibility of resolving a grievance through administrative channels within the Department.

Claimant Negotiation : Once a claim has been validated and accepted for negotiation by the Minister, the native claimant group (band or bands) may apply for a loan to support the further development and negotiation of their claim under the Loans to Native Claimants program. The program aims to support the claims negotiations which are often lengthy and involve a considerable investment of time and expertise. The loans are interest-free until an agreement-in-principle is reached. Subsequent loans to support claimants' negotiation costs towards a final agreement do carry interest charges. Loans and any accrued interest are repayable from the final settlement of a claim.

The loan programs are recorded in the Public Accounts of Canada as loans, investments and advances and are financed through non-budgetary appropriations.

The native claimant group must have its workplan approved and a funding level allocated in relation to the planned pace of negotiations before a standardized Loan Agreement can be finalized between both parties. The Loan Agreement specifies the total funds to be provided in a fiscal year, and a schedule of payments. It also requires a separate account for the funds received, quarterly progress reports and financial statements, plus an annual consolidated audited financial statement.

Figure 14: Claims Funding Process

Performance Information/Resource Justification

The main function of the Funding of Native Claimants Activity is to provide contributions to Indian and Inuit associations for researching, developing and submitting claims as well as to provide loans to support native claimants in the negotiation process in accordance with the federal government's stated policies on the resolution of claims.

Figure 15 illustrates the number of recipients funded and the number and value of contributions and loans provided. For detailed statements of the value of contributions and loans paid out to native associations by region, see page 5-38 and 5-40.

In 1985-86, the Department will provide contributions to approximately 22 native associations to engage in more than 300 claims research projects on behalf of their member bands. Loans will be provided to some 40 native claimant groups to further develop and negotiate their claims.

Figure 15: Contributions and Loans to Claimant Groups

1. The numbers in the loans portion of the chart indicate the number of claimants funded that year through loans to carry out research and negotiation on accepted claims.

2. The numbers shown in the contributions portion of the chart relate to the number of recipients funded to enable them to carry out the necessary research to establish a claim.

A total of 280 specific claims have been submitted to the Office of Native Claims as of April 1, 1984, including 84 related to outstanding treaty land entitlements, and 22 involving British Columbia cut-off lands.*

The primary factors having an impact on activity resourcing are the type and number of claims under consideration. Comprehensive claims require extensive research and time to prepare positions for the negotiation talks. A specific claim, on the other hand, is one in which the basis of the claim has been established and therefore does not require the same level of resources for research and negotiation. It is anticipated that the number of both types of claims will increase as bands become more confident of the potential success of resolving their grievances through the claims process, thereby creating a potential increase in the level of resources that will be required.

* The term "cut-off lands" is described in the Footnote on page 5-12 of the Program Overview, Section I.

C. Settlements

Objective

To fulfill the federal government's financial compensation obligations agreed to by the parties involved in the claims settlement process.

Resource Summary

This Activity accounts for approximately 65.1% of total Native Claim Program expenditures.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Settlements	43,952	-	42,073	-	16,404	-
	43,952	-	42,073	-	16,404	-

The change between Estimates 1985-86 and Forecast 1984-85 is mainly attributable to the $30 million increase in loans to the Inuvialuit Regional Corporation in 1985-86 offset by several one time grant settlements which took place in 1984-85. Of total expenditures in this activity 29.2% relate to grants and 70.8% to loans.

Past Financial Performance:

Figure 17: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Settlements	16,404	-	2,348	-	14,056	-

The change column is explained on page 5-13 .

Description

A major function of this Activity is to provide financial compensation payments to claimants according to the provisions of the claim settlement agreements, following their formal approval by all parties. This may also involve the making of grant payments to beneficiaries under the new funding relationship established by claim settlements. The settlements may require that a single payment or a series of payments be issued over a period of several fiscal years as detailed in a schedule set out in the agreements and may result in a requirement for ongoing grant payments. Prior to the finalization of any agreement this Activity also ensures that the Office of Native Claims (responsible for negotiating the settlement) has incorporated the repayment of any outstanding claims development and negotiation loans into the terms of the settlement agreement.

Performance Information/Resource Justification

This Activity provides payments to native claimants as specified in settlement agreements negotiated by the Office of Native Claims and approved by the government.

While the number and value of settlement agreements are the major factors affecting resources required by the activity, the complexity of the settlement is also of significance. As the financial compensation process becomes more complex the operational requirements of the program will have to be adjusted to ensure that effective monitoring of settlement terms and conditions is carried out and that payments are made in a timely and efficient manner.

A recent, significant outcome of the claims settlement process is the Cree/Naskapi (of Quebec) Act, July 1984, which removes certain lands allocated to the Cree and Naskapi from the provisions of the Indian Act. This new act established an autonomous relationship between the government and the native beneficiaries by providing the Cree and Naskapi with grants which had previously flowed from the Indian and Inuit Affairs (I&IA) Program, thereby greatly reducing the support role of the I&IA Program. Future settlements will likely continue this trend toward increased native autonomy.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures By Object

Figure 18: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and Wages	2,753	2,529	2,551
Contributions to Employee Benefit Plans	385	328	355
Goods and Services			
Transportation and Communications	408	406	363
Information	39	39	35
Professional & Special Services	1,089	1,084	970
Rentals	44	44	39
Repair & Upkeep	2	2	2
Utilities, Materials and Supplier	11	10	9
All Other Expenditures	1	1	1
Total Operating	4,732	4,443	4,325
Capital	1	1	1
Transfer Payments	17,360	45,568	19,864
Total Budgetary Expenditures	22,093	50,012	24,190
Non-Budgetary (loans, investments and advances)	45,424	15,345	14,993
Total Program	67,517	65,357	39,183

2. Personnel Expenditures

Figure 19: Person-Year requirements by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Claims Negotiations	63	63	63
Funding of Native Claimants	4	4	4
Settlements	-	-	-

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 21: Details of Transfer Payments

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Settlements			
Grants to the James Bay Cree and Naskapi Bands of Quebec	11,831	19,052	-
S - Grants to Indian and Inuit in respect of the James Bay and Northern Quebec Agreement	-	1,380	1,380
S - Grants to the Inuvialuit Regional Corporation	1,000		
Grant to the Oromocto Indian Band	-	-	2,550
Grants to the Westbank, Okanagan and Squamish Bands for the Settlement of land claims			9,695
Settlement of Specific Land Claim and Treaty Entitlement to Cattle (Long Lake No. 58 and Blackfoot Bands)	-	-	1,867
S - Grants to the Inuvialuit Development Corporation for the Economic Enhancement Fund and to the Inuvialuit Social Development Fund	-	17,500	-
Manitoba Northern Flood Agreement	-	850	-
Western Arctic Claims Settlement	-	1,615	-
Grant to the Chemainus Band in settlement of a specific land claim	-	642	-
Contributions			
Funding of Native Claimants			
Contributions to Native Claimants for the preparation and submission of claims	4,529	4,529	4,372
	17,360	45,568	19,864

B. Cost Analysis

Figure 22: Net Program Costs ($000)

	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Total 1984-85
Claims Negotiations	4,528	369	4,897	4,833
Funding of Native Claimants	19,037	17	19,054	19,026
Settlements	43,952	-	43,952	2,433
	67,517	386	67,903	26,292

The adjustments made to the estimated operating expenditures to arrive at a total cost include accomodations provided without charge by Public Works Canada and other services provided without charge by other departments.

C. Additional Information

1. Activity Structure Crosswalk

Figure 23: Reconciliation of Revised 1985-86 Activity Structure to Previous 1984-85 Activity Structure

1985-86 Activity Structure	1984-85 Activity Structure			
($000)	Establishment of Claims	Claims Research Development and Negotitation	Settlements	Total
Claims Negotiation[1]				4,528
Funding of Native Claimants[2]	4,529	14,303		18,037
Settlements			43,952	43,952
	4,529	14,303	43,952	67,517

1 All resources for Claims Negotiation were transferred in from the Administration Program in 1985-86.

2 $205,000 was transferred into the Funding of Native Claimants Activity from the Administration Program in 1985-86.

Total Program	48,600,000	49,626,735	46,627,284

Note: 1983-84 Main Estimates have been restated to reflect a transfer of operating expenditures to the Native Claims Program in 1985-86 ($4,326,000).

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- Propose amendments to the Indian Act to remove its long-recognized discrimination on the basis of sex, to bring the Act into conformity with the equality provisions of the Canadian Charter of Rights and Freedom which come into effect on April 17, 1985.

- Decentralize EDP applications to regional sites. Hardware replacement and modified applications designs will be initiated in 1985/86 and pursued during the next several years to ensure the introduction of a distribution network with appropriate EDP training and Management Services Branch support facilities. (see p. 6-23).

- Update the Improved Management Practices and Controls (IMPAC) agreement with the Office of Comptroller General and continue the strengthening of management practices within the Department. (see p. 6-23).

- Support to the Indian and Inuit Affairs objective of Band planning, development and management of their communities and affairs will be maintained through continuation of priority initiatives in the transfer of technology. Continuing initiatives involve the development and dissemination of technical, contracting and fire prevention/protection training courses and publications. (see p. 6-23).

- Implement a computerized loan accounting system nationally to provide quality and timely management reports for control and decision-making purposes.

- Assist in federal preparations for the third First Minister's Conference on Aboriginal Rights, required by the Constitution.

- Continue to develop a new framework for Indian government, moving significantly beyond existing policies and practices, and possibly involving legislative action.

- Support and participation associated with the communication activities of Expo 86.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Executive Direction	2,614	2,561	53	6-16
Corporate Policy	8,597	8,009	588	6-18
Finance and Professional Services	30,178	30,220	(42)	6-21
Personnel Services	7,488	6,947	541	6-24
Communications	3,320	3,387	(67)	6-27
Total	52,197	51,124	1,073	
Authorized Person-Years	908	904	4	

The 1985-86 estimate of $ 52,197,000 represents an increase of approximately $ 1,073,000 or 2.1% over the 1984-85 forecast.

Figure 2: Gross Expenditure by Activity (Percentage Distribution 1985-86)

Figure 3: 1985-86 Distribution of Gross Expenditures by Standard Object

B. Recent Performance

1. Highlights

- the Department played a continuing role participating in discussions of native rights leading up to the First Minister's Conference on the Constitution held in March 1984.

- the Department played a major role in developing the government's response to the Report of the Special Committee on Indian Self-Government tabled in November 1984.

- following the report of the Standing Committee on Indian Affairs and Northern Development regarding discrimination on the basis of sex under the Indian Act, the Department prepared legislation to amend the Indian Act. This legislation was tabled and passed in the House of Commons in June 1984.

- the high priority given to the management of human resources has resulted in the development and implementation of a comprehensive human resource management process and long term plan which provides clear direction to all levels of Departmental management relative to human resources and ensures that approved human resource management strategies are fully supported to achieve established, long term human resource objectives.

2. Review of Financial Performance

Figure 4: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Executive Direction	3,206	2,610	596
Corporate Policy	5,541	5,109	432
Finance and Professional Services	28,194	30,766	(2,572)
Personnel Services	6,907	6,986	(79)
Communications	2,779	3,129	(350)
	46,627	48,600	(1,973)
Authorized Person-years	928	894	34

The additional utilization of person-years in 1983-84 is a result of incremental requirements for the improvement of management practices and constitutional discussions on Aboriginal Rights as approved in Supplementary Estimates 'B'.

C. Background

1. Introduction

The Administration Program is responsible for providing policy direction, central advisory services, administrative services and functional guidance in such areas as finance, personnel and technical services to the Department's operating programs. The Program differs from the administration activities carried out by the operating programs in that their administration activities are directly in support of management and line operations.

The Administration Program is the focal point in the Department for projects relating to the improvement of management and control of the Department's financial, human and material resources. As well, the Program is the principal departmental contact with central agencies such as Treasury Board of Canada Secretariat, Treasury Board of Canada Comptroller General, Office of the Auditor General of Canada, Public Works Canada and the Public Service Commission.

Within the Program, the Corporate Policy sector ensures departmental co-ordination of policy issues and provides consistent liaison with Parliament, Cabinet policy committees, other federal departments and other levels of government. The range of functions includes research, evaluation, intergovernmental affairs and strategic planning. For certain key issues such as constitutional development, which cut across Program responsibilities, the Administration Program assumes the lead role with regard to policy development and analysis. Included in this sector's functions is the administration of two claims implementation secretariates.

2. Legal Mandate

The Administration Program provides policy direction and support to the two departmental operational Programs which include the Indian and Inuit Affairs program, whose legal mandate is based on the Indian Act, and the Northern Affairs Program, whose legal mandate is set out in various acts and regulations pertaining to Yukon and the Northwest Territories. The Department's overall responsibilities are defined in the Department of Indian Affairs and Northern Development Act, 1970 (as amended).

3. Program Objective

To ensure the efficient and effective management of the Department and its Programs in a manner that is responsive to its mandate, ministerial and parliamentary priorities, Central Agency directions and the overall needs of the Department's clients.

4. Program Organization for Delivery

Activity Structure: The Administration Program is divided into five Activities. Figure 5 illustrates the activity structure.

Figure 5: Activity Structure (for details refer to Section III C).

Organization Structure: The organization structure of the Administration unit is divided into four components, two of which are headed by Assistant Deputy Ministers. The other two are headed by Directors General who report to the Deputy Minister.

Figure 6: Resources by Organization/Activity ($000)

	ADM Corporate Policy	ADM Finance & Professional Services	DG Personnel	DG Communi-cations	Total
Executive	200	*2,061	188	165	2,614
Corp. Policy	8,597				8,597
Finance and Prof. Services		30,178			30,178

Communications				3,320	3,320
	8,797	32,239	7,676	3,485	52,197

* Includes $1,835,000 for Minister's and Deputy Minister's offices.

D. Planning Perspective

1. Environment

The Administration Program operates as the focal point for policy and administrative co-ordination within the Department. As such, the breadth and sensitivity of the Department's mandate make the Administration Program's operating environment exceptionally complex.

Working with the legal framework of 39 federal statutes and 13 treaties, the Minister, and therefore the Department, is responsible for a virtually complete range of governmental functions and services for specific constituencies: Indian and Inuit peoples, and the North generally.

This presents a "normal" departmental challenge of broad scope. For example, the Administration Program must establish and monitor the systems to administer over 5,000 contribution agreements with Indian governments, provincial and territorial governments, and other organizations, as well as approximately $62[illegible]M in direct departmental spending managed through 60 regional and district offices. These systems must cope not only with regular program expenditures, but also with controlling over 5,685 capital projects in excess of $299M in total value annually, and with operating and maintaining systems that support over 25,000 trust accounts. Because management of most of the Departments' spending is shared in various ways with Indians, Inuit or the territorial governments, clarification of accountability is a particular challenge.

At the same time, however, the Administration Program must provide leadership on the basic changes likely to affect the Department and its role over the next several years. On the policy side, for example, this means advising on the ongoing constitutional process to define the rights of Canada's aboriginal peoples, and recommending policy on Indian self-government in response to the work of the Special Parliamentary Committee on this subject. On the administrative side, for example, this will involve developing innovative planning, budgetary and accountability processes which can support the strengthening of Indian governments.

The cumulative effect of these issues is particularly acute in the current climate of restraint since the perceived needs of the Department's clients greatly exceed the incremental resources likely to be available.

This situation also underlines the importance of improving management advisory and support services to enhance the productivity resources assigned to all programs in the Department. Of particular concern in this respect is the quality of human resource management in terms of both the quality of people and of the processes whereby they contribute to the objectives of the Department.

The Communications Branch evaluates and realigns its communications resources in response to the governments communications initiative and increased requirements by its agencies for the preparation and implementation of communications strategies and plans. The objective will be to carry out more active communications, especially at the regional level in support of governmental and departmental strategic objectives and policy thrusts. Internal communications have been overhauled to improve employees' knowledge of the Department's aims, objectives, policies and programs.

2. Initiatives

The Administration Program proposes no new initiatives for 1985-86.

3. Program Effectiveness

Data cannot readily be presented in isolation from similar evaluations of the Indian and Inuit Affairs and the Northern Affairs Program Activities.

In Section II, Analysis by Activity, some data are presented for the Program Activities.

Section II
Analysis by Activity

A. Executive Direction

Objective

To ensure that the executive direction provided to the Department corresponds to the Minister's priorities and reflects the overall needs of clients, Parliament, central agencies and departmental managers with respect to strategic planning, approval and promulgation of relevant policies, accountability for results, and the related utilization of human and financial resources.

Resource Summary

This Activity accounts for approximately 5.0% of the total Administration Program expenditures and 4.4% of the person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive Direction	2,614	40	2,561	40	3,206	49

Of total expenditures in this activity 67.4% relate to personnel costs and the remainder to other operating costs, most of which are for professional and special services.

Past Financial Performance

Figure 8: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Executive Direction	3,206	49	2,610	40	596	9

Additional expenditures in this Activity are partially due to increased costs in the areas of travel, contractual requirements and associated costs for the Minister and Senior Departmental Officials regarding the First Ministers Conference and initiatives related to Indian Self Government and discrimination legislation.

Description/Resource Justification

The Executive Direction Activity includes the Minister, Deputy Minister, Associate Deputy Minister, Assistant Deputy Ministers of Finance and Professional Services and of Corporate Policy, Directors General of Personnel and Communication and the immediate support staff of their offices.

The Assistant Deputy Minister, Finance and Professional Services, as well as having management responsibilities for Finance and Professional Services, is responsible for the Department's management improvement and control practices.

The Assistant Deputy Minister, Corporate Policy, is the Department's senior policy officer. As such, he is responsible for providing the strategic framework within which policy is developed. He also ensures that detailed policies make sense, respond to the Minister's priorities and are capable of achieving their purposes.

The Director General, Personnel, is responsible for policy and program development services at the corporate level as well as provision of functional direction with respect to personnel operations in the regions.

The Director General, Communications is responsible for development of communications policy, standards and strategy as well as provision of communications advice to departmental senior management.

B. Corporate Policy

Objective

To ensure that the Department's overall policies and programs are coherent, consistent with the government's priorities and effective in meeting client needs; to research and develop strategic policies as assigned by the Minister or the Deputy Minister; and to evaluate departmental programs in accordance with Treasury Board policy.

Resource Summary

This Activity accounts for approximately 16.5% of the total Administration Program expenditures and 12.6% of the person-years.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Intergovernmental Affairs	-	-	-	-	-	-
	5,541	90	5,109	84	432	6

The deficit in this Activity results mainly from increased resourcing for constitutional discussions on Aboriginal Rights as approved in Supplementary Estimates 'B'.

Description/Resource Justification

Corporate Policy is the senior staff group for the Minister and Deputy Minister. It is responsible for strategic policy development; manages relations with provincial governments; conducts evaluations of programs and policies across the Department; conducts and supports research including that related to preparation of native claims; oversees the implementation of comprehensive claims settlements; manages Parliamentary relations and correspondence for the Minister and Deputy Minister; and coordinates the Minister's participation in the Cabinet Committee System. The strategic policy responsibility refers to policy that gives overall direction to the Department including policies which transcend the interests of individual programs, or have a major impact on the mandate and role of the Department. Overall, Corporate Policy is responsible for ensuring that the Department's policies and programs are consistent with the Minister's and government's priorities, and effective in meeting the needs of the populations served by the Department.

The Activity's resource requirements are primarily for salaries and professional services. There has been an intense demand for strategic policy in the Department in recent years as the basic relationship of the federal government to Indians and the North has been changing. This is apparent in such areas as constitutional development of aboriginal rights, Indian self-government,

intergovernmental agreements and other Indian or Inuit issues which increasingly require broad policy definition, e.g., Indian taxation, administration of justice of Indians, and hunting and fishing rights. There has also been a growing requirement for coordination of these fields of Indian policy with other major related developments in northern political evolution and comprehensive claims negotiations. Coordination of comprehensive claims settlement implementation has been located in Corporate Policy because of the special sensitivity of these complex, modern-day treaties, and their many new policy aspects. This is accomplished through the establishment of small implementation secretariats which coordinate the work of other branches within INAC, other federal Departments and, where appropriate, the offices of territorial and provincial governments. To date the Department has established two secretariats - one for the Western Arctic (COPE) Agreement and the other for the James Bay and Northern Quebec Agreement and the Northeastern Quebec Agreement.

Research and evaluation responsibilities undertaken by this activity essentially support strategic policy and planning purposes. Their resourcing is thus broadly a function of the nature and requirements of the strategic policy and planning activity. The resources required for the evaluation function also depend on Treasury Board policies, and the Claims Funding Program administered by the research group is affected by government decisions on claims policy and approved levels of claims activity.

C. Finance and Professional Services

Objective

To provide central financial planning and operations which satisfy central agency and Parliamentary requirements for reporting, visibility, accountability and control, and to establish and maintain the technical competence required for departmental systems, and architectural, engineering and contract administration.

Resource Summary

This Activity accounts for approximately 57.8% of the total Administration Program expenditures and 59.4% of the person-years.

Figure 11: Activity Expenditures ($000) and Person-Years

Legal	240	6	247	6	(7)	-
	28,194	578	30,766	552	(2,572)	26

Surpluses were a result of restrictions placed on travel activities, delays in activities involving contracts e.g. audit contacts; more in house projects as opposed to planned contracted work; and reductions in systems development and maintenance costs.

Description/Resource Justification

Finance and Professional Services is divided into six sub-activities as illustrated in figure 12. Financial Services which includes Financial Administration Branch, Financial Management Branch and Headquarters Financial Services; Management Services Branch; Management Practices Branch; Technical Services and Contracts Branch. In addition there are two sub-activities, Departmental Audit Branch and Legal Services, which are the administrative responsibility of the Assistant Deputy Minister.

Financial Administration Branch: develops and operates systems of financial administration, develops accounting policy, and provides functional direction to departmental accounting.

Financial Management Branch: develops resource planning and allocation mechanisms, manages the Budgetary Control System, and provides resource planning information, advice and guidance on a functional basis regarding regional resource planning activities.

Headquarters Financial Services: provides forecasting, planning and analysis services to headquarters program managers and the operation of financial administration, accounting, resource control and financial reporting systems.

Management Services Branch: provides all automated data processing services throughout the Department including the development, maintenance and operations of departmental systems. For 1985-86 and future years, emphasis will be placed on decentralized applications of E.D.P. facilities to Regions. Provides central administrative and support services and the management of information and of assets both at Headquarters and field locations. As well, appropriate training will continue to the extent possible within existing resource levels.

Management Practices Branch: promotes sound managerial practices, processes and systems within the Department and is the focal point of Improved Management Practices, Accountability and Control (IMPAC) initiatives. It also carries out special projects and assignments as a result of new government policies or initiatives, and provides managerial advisory services within the Department.

Technical Services and Contracts Branch: is responsible for the provision of functional direction and advisory services concerned with the implementation of the Department's capital construction program, the maintenance of physical assets, the transfer of technology to Indian bands, fire protection and prevention on Indian reserves, and contract administration.

In addition to these functional responsibilities, Technical Services and Contracts provides direct support services to the headquarters units in contract administration and provides direct technical support and project management services in the implementation of the Department's Northern Roads activities.

Departmental Audit Branch: performs cyclical functional and management reviews of departmental organizations as well as special audits of selected client organizations. Findings and recommendations are reported to a Departmental Audit Committee chaired by the Deputy Minister.

Legal Services: provides advice and services of a legal nature to departmental management.

The majority of resources for the aforementioned organizations is required for salaries and related personnel expenditures.

D. Personnel Services

Objective

To provide functional direction and national policies required to acquire, develop, and maintain personnel to advise, assist, and support Departmental management and operations.

Resource Summary

This Activity accounts for approximately 14.3% of the total Administration Program expenditures 19.7% of the person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Special Concerns	2,597	66	2,404	66	2,386	64
	7,488	179	6,947	179	6,907	176

Of total expenditures in this activity 90.7% relate to personnel costs and the remainder to other operating costs, most of which are for professional and special services.

Past Financial Performance

Figure 14: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Functional Management	1,722	45	2,021	46	(299)	(1)
Operations	2,799	67	2,570	67	229	-
Special Concerns	2,386	64	2,395	70	(9)	(6)
	6,907	176	6,986	183	(79)	(7)

Description and Resource Justification

The Personnel Services Activity provides policy and program development services at the corporate level. It also delivers functional direction and monitors personnel operations and special human resource concerns throughout the regions of the department. Personnel Operations are provided to managers in NCR and nationally for specific non-delegated functions (e.g. management category).

Personnel administration is a staff function accountable to line management for the quality of advice and service delivered to managers and employees in all areas of personnel management. Personnel makes a contribution to the effectiveness and efficiency of the Department by providing all managers with quality advice and service in the areas of human resources planning, staffing, classification, workforce adjustment, training, special concern group employment, official languages, counselling, performance review and employee appraisal, employee relations, compensation, occupational health and safety and personnel information systems.

The advice and services delivered are consistent with legislative requirements and government-wide programs, policies and practices, to help managers effectively utilize their human resource complement. Personnel contributes to the acquisition, development and maintenance of a qualified work force and to the management of change by delivering clear and comprehensive programs which will assist management to improve participation in the Department of under represented groups - particularly Natives; it also assists in

improving management's capability to effectively plan and manage their human resources, and assist in the progress of managing changes as a result of devolution processes and economy measures.

The majority of resources are required for salaries and related personnel expenditures.

E. Communications

Objective

To ensure that clients, Members of Parliament and the general public have access to the level and quality of information needed to understand the Department's programs, policies, and services.

Resource Summary

This Activity accounts for approximately 6.4% of the total Administration Program expenditures and 3.9% of the person-years.

Figure 15: Activity Expenditures ($000's) and Person-Years

	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Communications	2,779	35	3,129	35	(350)	-

Surpluses result mostly from restrictions placed on advertising and publications as well as on travel.

Description and Resource Justification

Communications branch provides advice to the Minister and senior management on ways to increase public awareness and understanding of the Department's policies, programs and services. It manages various communications functions, including publishing, exhibits, audio-visuals, public enquiries and public and media relations and provides services to the major Programs. In addition, it provides functional direction to communications officers in all regions. The majority of resources are required for salaries and related personnel costs.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

The Administration Program's expenditures for 1985-86 are presented in Figure 17.

M-33

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Other Operating Costs

These costs represent $14,454,000 or $27.7% of total costs. Of this amount, $2,158,000 (14.9%) is for transportation and communications, i.e., travel, telephones and telegrams, etc., and $9,141,000 (63.2%) is for professional and special services, i.e., contracts, consultants, etc.

B. Cost Analysis

Net Program Cost

Figure 20: Net Cost of Program by Activity for the Year 1985-86 ($000)

	1985-86 Operating Expenditure	Add Other Costs	Total Cost	Forecast 1984-85
Executive Direction	2,614	344	2,958	2,906
Corporate Policy	8,597	984	9,581	9,161
Finance and Professional	30,178	4,641	34,819	34,881
Personnel	7,488	1,539	9,027	8,492
Communications	3,320	305	3,625	3,690
	52,197	7,813	60,010	59,130

The adjustments made to the estimated operating expenditures to arrive at a total cost include accommodation provided without charge by Public Works Canada and other services provided without charge by other Departments.

Labour Canada

1985–86 Estimates

Part III

Expenditure Plan

2453

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Labour Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

The Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section, and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $55,053,000 in support of the 1985-86 Labour Program. The remaining expenditures, estimated at $70,457,000 for contributions to employee benefit plans, payments of compensation respecting public service employees and merchant seamen, Labour Adjustment Benefits payments and the Minister's salary and motor car allowance, will be made under existing statutory authority.

Minister of Labour - Salary and motor car allowance	39,100	40,975	40,975
Payments of compensation respecting Public Service Employees (Government Employees Compensation Act) and Merchant Seamen (Merchant Seamen Compensation Act)	20,114,000	29,695,391	29,695,391
Contributions to employee benefit plans	3,380,000	3,762,000	3,762,000
Labour adjustment benefits (Labour Adjustment Benefits Act)		10,682,496	10,682,496
Refunds of amounts credited to revenue in previous years		25,178	25,178
	23,533,100	44,206,040	44,206,040
Total Program	77,982,100	109,453,996	104,636,565

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86 the Labour Program will undertake the following:

- continued implementation of amendments to the Canada Labour Code (see page 28);
- implementation of a new compliance policy for Parts III and IV of the Code, designed to promote self-regulation throughout Labour Canada's jurisdiction and to advance an increased employee-employer awareness of their responsibilities for the workplace and the prevention of occupational hazards (see page 28);
- programs of information, education and promotion, and other initiatives aimed at increasing communication, consultation and cooperation among officials and leaders in the labour, government and business communities (see page 38); and
- proposed evaluations of the statutory programs Labour Adjustment Benefits and Federal Government Employment Injury Benefits (see pages 47 and 51, respectively).

2. Financial Summary by Activity

Funding requirements for the Labour Program for both the Estimates year and the current fiscal year are presented by activity in Figure 1.

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Mediation and Conciliation	4,040	3,675	365	21
General Labour Services	26,192	23,713	2,479	28
Policy and Communications	18,098	16,679	1,419	38
Labour Adjustment Income Support Program	43,778	40,612	3,166	47
Injury Compensation Respecting Government Employees and Merchant Seamen	47,670	43,884	3,786	51
Administration	9,062	9,116	(54)	55
	148,840	137,679	11,161	61
Less-Receipts and Revenues Credited to Vote*	23,330	21,096	2,234	62
	125,510	116,583	8,927	61
Authorized person-years	828	839	(11)	

*These receipts and revenues are derived from the operation of the Injury Compensation Respecting Government Employees and Merchant Seamen Activity.

Explanation of Change: The increase of $8,927,000 (7.7%) in the 1985-86 requirements over the 1984-85 forecast is made up of the following major items:

	($ million)
• General Labour Services Activity for the Labour Education Program;	0.8
• Policy and Communications Activity for the Technology Impact Research Fund;	1.2
• Policy and Communications Activity for the Labour-Government Employee Secondment Program;	0.4

	($ million)
• Labour Adjustment Income Support Program Activity for increased statutory labour adjustment benefits payments;	3.2
• Injury Compensation Respecting Government Employees and Merchant Seamen Activity as a result of a revision to the forecast of statutory compensation payments;	1.6
• Contributions to employee benefit plans in all Activities; and	0.2
• Salaries and wages in all Activities.	1.4

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $21.4 million or 22.5% higher than the 1984-85 Main Estimates of $95.2 million (Extracts from Part II of the Estimates, page 4). The difference of $21.4 million reflects the following major offsetting items:

	($ million)
• Supplementary Estimates for a grant to the Canadian Labour Market and Productivity Centre (Policy and Communications Activity);	5.0
• upward revision of the forecast for statutory labour adjustment benefit payments due primarily to an increase in layoffs in nationally designated industries (Labour Adjustment Income Support Program); and	17.0
• downward revision of the forecast of statutory compensation payments under the Government Employees Compensation Act to reflect a lower inflation rate (Injury Compensation Respecting Government Employees and Merchant Seamen Activity).	(1.0)

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 were:

- preparation of amendments to the Canada Labour Code for tabling in 1984-85 (see page 18);

- establishment of a Public Affairs Unit aimed at improving consultative mechanisms. Charged with promoting contact and consultation between the federal government and the trade union movement, and between organized labour and the business community, this unit has been organizing and continues to organize a series of consultation seminars which bring together senior labour, government, and business officials for an exchange of ideas and concerns (see page 19); and

- release of the report of the Commission of Inquiry into Part-Time Work on September 7, 1983 (see page 18).

An update of the Program's performance during 1984-85 is as follows:

- passage on June 29, 1984, of major amendments to the Canada Labour Code which included, amongst other things, extended child-care leave availability, new protections against sexual harassment in the workplace, strengthened safety and health provisions with coverage extended to include most employees under federal jurisdiction including those in the federal Public Service, mandatory union dues check-off, and revision and clarification concerning the duty of fair representation (see page 18);

- establishment of a Part-Time Employment Unit to examine the implications of an inquiry commission's recommendations on part-time work (Wallace report), with a view to developing policies by the summer of 1985 (see page 18);

- development of responses to problems presented by the introduction of microtechnology in the workplace, through legislative requirements for advance notice and negotiation of significant change to protect employees from adverse consequences of such change, and development and implementation of the Technology Impact Research Fund and Technology Education Seminars (see page 18);

- policy and program development is now under way for delivery under Part III of the Labour Code respecting Equal Pay provisions (see page 28);

- development and administration of a Labour-Government Employee Secondment Program, and provision of financial support to the Canadian Labour Market and Productivity Centre as part of the ongoing initiative to improve communication and consultation mechanisms among the major interests of business, labour and government (see page 19); and

- improvements to the labour data base through the development of an "effective wage" measure, a measure which takes into account the effects of cost-of-living adjustments (COLA) negotiated in collective agreements, thereby giving a more accurate picture of wage changes in the economy. The improvements also provide for the inclusion in the data base, of collective agreements from the construction industry.

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Mediation and Conciliation	3,368	3,262	106
General Labour Services	21,436	18,767	2,669
Policy and Communications	15,167	9,478	5,689
Labour Adjustment Income Support Program	24,754	16,969	7,785
Injury Compensation Respecting Government Employees and Merchant Seamen	47,052	52,789	(5,737)
Administration	8,535	7,817	718
	120,312	109,082	11,230
Less-Receipts and Revenues Credited to Vote*	15,675	31,100	(15,425)
	104,637	77,982	26,655

*These receipts and revenues are derived from the operation of the Injury Compensation Respecting Government Employees and Merchant Seamen Activity.

The difference between actual expenditures and the Main Estimates is due primarily to the following items:

	($ million)
• Supplementary Estimates for contribution payments under the Labour Education Program and various offsets (General Labour Services Activity);	2.5
• Supplementary Estimates for a grant to the Canadian Labour Market and Productivity Centre and other miscellaneous items (Policy and Communications Activity);	5.7
• Supplementary Estimates for statutory labour adjustment benefit payments (Labour Adjustment Income Support Program Activity);	8.1
• lower than anticipated costs of the Automatic Assumption provision in Nova Scotia Workers' Compensation legislation, which relates to the provision of compensation to any coal miner who has worked at the face of a mine, or in similar conditions, for twenty years or more, and who suffers a loss of lung function (Injury Compensation Respecting Government Employees and Merchant Seamen);	(5.7)
• related to the above, corresponding lower than anticipated revenues associated with the Automatic Assumption provision in Nova Scotia Workers' Compensation legislation (Injury Compensation Respecting Government Employees and Merchant Seamen);	5.7
• outstanding accounts mainly due to a legal dispute with a major client (Injury Compensation Respecting Government Employees and Merchant Seamen Activity); and	9.7
• Supplementary Estimates for the centralized distribution of publications and reallocations from other activities to cover cost over-runs (Administration Activity).	0.7

C. Background

1. Introduction

Jurisdiction over labour matters in Canada is subject to divisions among the federal and provincial governments. Although the power to

legislate in the field of labour relations is primarily the constitutional responsibility of the provinces, the federal government also has constitutional authority originally vested in the British North America Act to enact labour legislation affecting a number of matters within its exclusive jurisdiction.

The Canada Labour Code, which is the responsibility of the Labour Program, applies to employees across Canada who work for an industry or enterprise which is considered a federal undertaking or business. These include those industries involved in interprovincial or international rail, road and pipeline transportation, shipping and related services, air transportation, interprovincial and international telecommunications, banks and certain Crown corporations. Also included are industries declared by Parliament to be for the general advantage of Canada, such as uranium mining. Finally, all non-federal industries in the Yukon and the Northwest Territories are under federal labour jurisdiction with respect to Part V (Industrial Relations) of the Labour Code.

Although Labour Canada's programs of compliance, prevention and enforcement are applied only to those industries and enterprises within the federal jurisdiction, the Labour Program is also concerned with improvements to the labour relations system and climate in all of Canada. Its concerns also involve general labour issues as they may be affected by, and impact upon, public policy choices by the government as a whole. In this respect, education, communication, promotion, information, and policy research and analysis programs are not limited to the industries under federal jurisdiction but are national in scope.

The operations of Labour Canada are complemented by those of the Canada Labour Relations Board, which is an independent, quasi-judicial body empowered to certify bargaining agents and adjudicate certain kinds of disputes, mainly in the area of industrial relations.

2. Legal Mandate

The mandate of the Labour Program is derived from the Department of Labour Act and the Canada Labour Code, which consists of Labour Standards (Part III), Occupational Safety and Health (Part IV), and Industrial Relations (Part V), as well as the Fair Wages and Hours of Labour Act, the Government Employees Compensation Act, the Merchant Seamen Compensation Act and the Labour Adjustment Benefits Act.

In general, this mandate involves the assurance of appropriate labour standards and the fostering of a positive labour relations climate through the administration of the Program's legislation.

3. Program Objectives

The objectives of the Labour Program are:

- To promote and sustain stable industrial relations, a fair return for efforts in the workplace, and a working environment conducive to physical and social well-being;
- to protect the rights and interests of the parties involved in the world of work;
- to promote equitable access to employment opportunities; and
- to foster a climate for improved consultation and communication among government, labour and management.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 3 on the next page, the Labour Program is divided into six activities, each consisting of one or more components. Two activities, Injury Compensation Respecting Government Employees and Merchant Seamen, and Labour Adjustment Income Support Program, are statutory. The first activity is designed to meet requirements of the Government Employees Compensation Act and the Merchant Seamen Compensation Act. The latter, Labour Adjustment Income Support Program, meets the requirements of the Labour Adjustment Benefits Act. Two other activities, Policy and Communications, and Administration, are aimed at policy/program development and management, and the provision of support systems and services respectively. The remaining activities, Mediation and Conciliation, and General Labour Services, are intended for the direct provision of services to the Labour Program's clients.

Two components represented in the 1984-85 Program Expenditure Plan have changed, in name only, to better represent the existing supporting functions. The Administration and Policy Development Component of the General Labour Services Activity is now Policy Development/Management and Administration. Within the Labour Adjustment Income Support Program Activity, the Administration Component has been changed to Labour Adjustment Review Board and Secretariat.

Figure 3: Activity Structure

Organization Structure: The Labour Program is a highly decentralized organization consisting of a headquarters, five regional offices and twenty-five district offices.

The Deputy Minister manages the Labour Program and is directly assisted by three Assistant Deputy Ministers (Federal Mediation and Conciliation Service, Operations, and Policy), two Directors-General (Administrative Policy and Services, and Personnel), and three Directors, (Women's Bureau, Communications and Legal Services).

Figure 4 on the next page, outlines the activity/organization structure of the Labour Program and the respective resource requirements.

Figure 4: Resources by Organization/Activity ($000)

Activity		Labour Canada	Adm. Operations	Adm. Policy	Info. Communications	Women's Bureau	Dep. Adm. Personnel	Dep. Adm. Admin. Policy and Services	Offices of Dep. Adm. and Legal Serv.	Total

D. Planning Perspective

1. Environment

The Canadian economy is currently recovering from the most severe set-back since the depression of the nineteen thirties. Economic forecasts for the medium-term generally indicate a period of renewed but modest growth. Substantial progress has been made in reducing price and cost inflation, but generally speaking, over the past few years, nominal wage gains have not kept pace with prices, and real wages have fallen. These factors will undoubtedly affect the labour relations climate and may impose substantial strains on the collective bargaining system.

Concern over unemployment, job preservation and uncertainty over technological change will be uppermost in the minds of those on the workers' side of the bargaining table. Employers' preoccupations, on the other hand, will revolve around productivity and cost competitiveness. The basic challenge in bargaining, therefore, will be to attempt to reconcile these two sets of interests. Job security, re-training, income support, pensions, early retirement, two-tier wage systems, profit sharing and productivity are some of the elements that will be in play at the bargaining table in an attempt to resolve this difference in perspective as between labour and management.

Major changes taking place in the economy will also provide a challenge in terms of the management of change in the workplace, whether that workplace is organized or not. Fundamental sectoral and regional changes caused by advances in technology and offshore competition will no longer be confined to what have been the traditional areas of footwear, tanning, clothing and textiles. Several other sectors, such as mining and forestry, have also shown signs of vulnerability. The extension of income support programs such as that provided under the Labour Adjustment Benefits Act will need to be addressed in this context.

Economic change will also in all likelihood call into question the adequacy of existing labour legislation and standards. The effectiveness of present standards and regulations in the field of occupational safety and health, for example, is coming under increasing scrutiny. Furthermore, the emerging concerns over new issues such as robotics, ergonomics, bio-technology and office air quality will add impetus to the demands for reassessment.

Finally, the rapid increase in the number of women in the workplace has brought into question the adequacy of legislation and norms in such areas as equal pay for work of equal value, family leave and sexual harassment. Many of the three million women who have moved into the work force over the past two decades find themselves occupying part-time positions, which are less well structured in terms of pay and benefits than are corresponding full-time positions. Public policy decisions surrounding such matters as minimum wage, pensions and health benefits for the part-time work force will be very much to the fore during this period.

2. New Initiatives

In keeping with its policy on restraint, the Department has no new initiatives of financial significance for 1985-86.

3. Update on Previously Reported Initiatives

Amendments to the Canada Labour Code: Following extensive consultation with some 40 employer and employee associations, a major bill to amend the Canada Labour Code was tabled in the House of Commons on May 15, 1984, passed on June 29, 1984, and is being proclaimed in stages.

One of the major objectives of this bill is to consolidate legislative powers for work health and safety, which had previously been fragmented. Part IV of the Canada Labour Code will also be extended to include most employees under federal jurisdiction, including those in the federal Public Service.

The amendments to Part IV are also designed to encourage greater worker and employer participation in occupational health and safety matters through compulsory health and safety committees or health and safety representatives.

The effect of the amendments to Part III of the Code, will be to improve the position of workers with family responsibilities and to address the problem of sexual harassment in the workplace.

Amendments to Part V, which were proclaimed in force July 18, 1984, include amongst other things provision for mandatory union dues check-off (Rand Formula), clarification of the definition of dependent contractor and employer, advance notice of technological change, revision and clarification concerning the duty of fair representation, and improved provisions relating to the administration of the legislation.

Commission of Inquiry into Part-Time Work: Subsequent to the release of the report of the Commission of Inquiry into Part-time Work (Wallace Commission) in September 1983, a Departmental Committee was established to analyze its findings. The Committee concluded that before action could be taken on any of the Inquiry Commission's 32 recommendations, information was needed both about the circumstances of part-time workers under federal jurisdiction, and about the costs to employers and employees of increasing benefits for these workers.

Therefore, a Part-Time Employment Unit ($230,000 operating for 1984-85) was established in June 1984, with the mandate of collecting the necessary data by means of a survey and consultations with provincial governments, employers and unions. When the data has been gathered and analyzed, recommendations will be made for appropriate changes in policies and/or legislation.

Microtechnology: The impact of new technologies on the workplace has been addressed by the Labour Program through the following endeavours.

Legislative requirements have been put in force for employers to provide for advance notice and negotiation of significant changes to protect employees from adverse consequences of technological change.

A three-year Technology Impact Research Fund Program (approximately $4.5 million in contribution funds only, covering 1984-85 to 1986-87) was created to provide financial support for research studies on the social and human impacts of technological change in the workplace, and for demonstration or pilot projects that illustrate effective methods of cooperative development and implementation of technological innovation.

Related to the above is a separate initiative which will be introduced in an effort to foster a more strategic approach within the labour movement to technology-related issues. The Department is sponsoring a process (Technology Education Seminars) which will increase trade union leaders' awareness of the challenges and opportunities stemming from technological change and encourage them to minimize the adverse effects and maximize the beneficial effects.

Consultative Mechanisms re National Dialogue: The Department's communication and consultation efforts have concentrated on interpreting the goals and aspirations of the labour movement to the federal government and, in turn, on interpreting government activities and policies to organized labour. This interface between labour and government has been achieved through a variety of mechanisms ranging from informal joint seminars to providing a "pathfinding" service (for organized labour) to key government departments. This pathfinding service is assisted in part through a three-year Labour-Government Employee Secondment Program (approximately $1.6 million in contribution funds only, covering 1984-85 to 1986-87). The Department also provides financial support to the Canadian Labour Market and Productivity Centre to address key issues such as productivity and employment growth.

More recently, the Department has expanded its consultative initiatives by acting as a catalyst in fostering dialogue between labour and the business community. These relatively low-key efforts to build up a level of trust and confidence among the parties are judged to be essential to any successful, high profile meetings of labour, business and government.

4. Program Effectiveness

Due to the diversity of the Labour Program, program effectiveness measures will be obtained by activity level effectiveness indicators rather than overall program level. Some activity level indicators are now in place, such as those displayed in Figures 7 and 8 on pages 24 and 25 for the Mediation and Conciliation Activity. The development of further activity level effectiveness measures and indicators is a

priority of departmental management. The development of suitable monitoring and information systems to produce such indicators will require time and experience. However, it is expected that in the next several years effectiveness of all the major activities of the Labour Program will be measured and reported accordingly.

In 1983 the Conditions of Work program was evaluated. This evaluation indicated that the program continues to be a relevant instrument to achieve government objectives in the labour affairs field. The evaluation also reviewed the program performance in terms of specific labour standards such as hours of work, fair wages and hours of labour, and unjust dismissal. The evaluation findings are presently under review by program managers and a follow-up strategy will be articulated by the end of the 1984-85 fiscal year. The Labour Education Program is currently under evaluation. The Department also proposes to evaluate the Quality of Working Life Program, and two major statutory programs dealing with the Labour Adjustement Benefits Program and the Federal Government Employment Injury Benefits Program.

Section II
Analysis by Activity

A. Mediation and Conciliation

Objective

To promote and maintain a stable industrial relations environment by providing third-party dispute resolution assistance in federal jurisdiction, and by implementing innovative strategies, policies and legislative proposals.

Resource Summary

Expenditures for the Mediation and Conciliation Activity will account for approximately 3.2% of total 1985-86 Program expenditures and 8.4% of total person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Mediation and Conciliation	2,669	47	2,364	45	2,026	40
Arbitration Services	746	8	669	8	514	7

Arbitration Services	514	7	483	8	31	(1)
Research and Policy Development	828	18	656	16	172	2
	3,368	65	3,262	69	106	(4)

No significant changes occurred between 1983-84 planned and actual financial performance.

Description

The Mediation and Conciliation Activity, through the Federal Mediation and Conciliation Service, fulfills the statutory responsibility under the Canada Labour Code, Part V, for the provision of conciliation, mediation and arbitration assistance for dispute resolution in the federal private sector; the adoption of dispute prevention initiatives to maintain stable labour-management relations; and the provision of industrial relations expertise for policy formation and implementation, and legislative development. Three components are identified: Mediation and Conciliation; Arbitration Services; and Research and Policy Development.

Mediation and Conciliation: This component involves the appointment of conciliation officers, conciliation commissioners and conciliation boards, mediators, fact-finders and industrial inquiry commissions and the processing of complaints to the Minister concerning alleged unfair labour practices. Other services provided are preventive mediation, and grievance and complaint mediation, which are applicable during the "closed" period of contracts and serve to facilitate collective bargaining and reduce labour-management conflicts.

Arbitration Services: This component involves the investigation of requests received by the Minister for the appointment of arbitrators and the establishment of arbitration boards to arbitrate grievance disputes during the term of collective agreements. It also involves the appointment of adjudicators to hear and adjudicate complaints of unjust dismissals lodged by employees not subject to collective agreements, pursuant to Part III of the Canada Labour Code. Arbitration Services also conducts research and promotes systems to expedite the grievance arbitration process, maintains the National Inventory and Subject Index of Arbitral and Adjudication Awards, and publishes the Federal Arbitration Award Digest and Arbitration Services Reporter.

Research and Policy Development: This component involves the research and analysis of industrial relations problems, policy development and the provision of technical support and economic advice to third-party appointees.

Performance Information/Resource Justification

Mediation and Conciliation: This component will require $2,669,000 and 47 person-years to perform its function.

Workload: The number of federal private sector collective agreements entering their "open" or bargaining period represents the overall potential caseload for Mediation and Conciliation, and provides an indication of the mix of resource usage among major tasks in any given year.

Overall potential caseload consists of bargaining situations involving renewal of existing collective agreements plus bargaining for first collective agreements as a result of new certifications. Bargaining for renewal represents the majority of the caseload, but bargaining for a first agreement generally requires a larger commitment of time and resources than does renewal.

On average, between 35% and 45% of all renewal agreements are reached by the parties in direct negotiations (i.e., without third-party assistance). The remaining situations call for mediation or conciliation assistance and represent the actual demand or workload for the Mediation and Conciliation component.

The number of collective agreements expiring in any given year is a function of the original term of the agreements. Longer term agreements contribute to labour stability, but in times of economic uncertainty the parties often seek shorter terms or reopener provisions. The Public Sector Compensation Restraint Act (PSCRA) had the effect of extending collective agreements at federal Crown Corporations for two years. These agreements represent approximately 20% of the Federal Mediation and Conciliation Service universe, and the result has been a

decrease in potential caseload for 1982-83 and 1983-84, but a significant increase in the number of agreements expiring in fiscal year 1984-85. It is anticipated that the number of expiring agreements will return to pre-PSCRA or normal levels in 1985-86, which is a decrease in workload from the forecasted 1984-85 caseload. This is reflected in Figure 7, which demonstrates the recorded and forecast levels of potential and actual demand for mediation and conciliation assistance.

Figure 7: Collective Bargaining Under Part V, and Federal Mediation and Conciliation Service Caseload

Economy: Over the past ten years, the program has deliberately de-emphasized the use of conciliation commissioners (industrial relations experts outside of the public service retained to provide dispute resolution assistance) and increased the use of government conciliators, in the role of mediators. The overall rate of settlement without work stoppage has been maintained, and a significant financial saving realized (see Figure 8).

Figure 8: Effectiveness and Economy Measures

Effectiveness: The primary measure of effectiveness of the Mediation and Conciliation component is the percentage of cases concluded to finality without a work stoppage. As indicated in Figure 8 above, despite a number of outside variables affecting the bargaining process, the component has consistently maintained a settlement ratio in the 90% range.

The number of disputes which involve a work stoppage varies from year to year, as does the duration of the stoppages. However, on average, less than 0.5% of all available work time per year is lost due to labour disputes.

Arbitration Services: This component will require $746,000 and 8 person-years to perform its function. With the exception of the maintenance of the Index of Arbitral and Adjudication Awards, and the publication of the Federal Arbitration Award Digest and Arbitration Services Reporter, this component is totally keyed to demand.

Workload: Under Part V of the Code, requests for the appointment of arbitrators to resolve differences arising from the interpretation of a collective agreement emanate directly from the parties. Under Part III, requests for referral of unjust dismissal complaints to adjudication are made at the regional office level and are only referred to Arbitration Services after mediation efforts have failed to bring about a settlement. Consequently, only those cases that Arbitration Services refers to the Minister for appointment are computed. See Figure 9 below.

Figure 9: Arbitration Services Caseload

	Part V			Part III
	Requests	Cases[2] Settled	Arbitrators Appointed	Adjudicators Appointed
1980-81	68	28	40	51
1981-82	92	49	43	63
1982-83	114	44	70	78
1983-84	115	37	76	140
1984-85[1]	127	40	87	162
1985-86[1]	139	43	96	184

[1]Forecast
[2]Difference resolved prior to appointment of arbitrator

The increase in usage of the unjust dismissal adjudication provision since its introduction in 1978, is demonstrated in Figure 10.

Figure 10: Perspective on Unjust Dismissal Adjudications

The substantial increase over the period 1978-79 to 1983-84 is likely due to an increase in the number of complaints filed as knowledge of the provision amongst the unorganized federal labour force improves. The increase in the number of complaints settled prior to adjudication hearing is attributed to improved knowledge by employers of the jurisprudence governing unjust dismissal settlements.

Research and Policy Development: The proportion of resources devoted to this component are shown in Figure 11 as a percentage of the resources of the total Mediation and Conciliation Activity. These supportive functions are best expressed as a percentage of the Activity since their resource allocation is largely dependent on the demand for third-party assistance as described in the two previous components.

Figure 11: Research and Policy Development Resources as a Percentage of Total Activity Resources

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Person-Years	14 (20%)	15 (22%)	18 (28%)
Expenditures ($000)	625 (16%)	642 (17%)	828 (25%)

B. General Labour Services

Objectives

In the federal jurisdiction: to develop programs and to provide new policies and proposed legislative changes in response to identified client needs and government priorities with respect to occupational safety and health (Part IV) and conditions of work (Part III); to enforce client compliance with the legislation (Parts III and IV) and to encourage the acceptance by workers, unions and employers of their respective responsibilities under the legislation (Parts III and IV).

In the national context: to encourage value and attitudinal shifts leading to improvements in the workplace through the programs of Labour Education and Quality of Working Life.

Specific plans for 1985-86 include:

- continued implementation of Bill C-34. Given delayed proclamation, the implementation of the changes to Parts III and IV of the Canada Labour Code will be accelerated in 1985-86. Emphasis will be placed on enforcing the requirements of the Code with respect to Safety and Health Committees and Representatives, and revision or development of Part IV regulations.

- implementation of a new compliance policy for Parts III and IV of the Code. It has been determined that traditional methods of delivery are no longer adequate in achieving a sufficient level of client compliance with Parts III and IV of the Code. Accordingly, a new rationalization of services is being pursued under the aegis of this policy which will bring increased program focus on those companies and industrial sectors which have a higher incidence of accidents, complaints, and/or violations. An appropriate balance will also be sought between programmed inspections and response to complaints. The new compliance policy and procedures are designed to promote self-regulation throughout Labour Canada's jurisdiction and to advance an increased employee-employer awareness of their responsibilities for the workplace and the prevention of occupational hazards.

- implementation of an equal pay program designed to effect reduced employer discriminatory pay practices within the federal jurisdiction as expressed in the concept "equal pay for work of equal value".

- proposals being put forward for the extension of the Labour Education and Quality of Working Life Programs subject to positive evaluations.

- implementation of a national training program for Labour Affairs Officers (LAO's) which is designed to provide consistent training for all new LAO's and continuous upgrading for existing staff. Labour Affairs Officers are the essential delivery personnel for the legislative programs in General Labour Services. Faced with a high degree of future turnover in this area due to retirement, individuals with ready-made skills and experience are becoming relatively scarce.

Resource Summary

Expenditures for the General Labour Services Activity will account for approximately 20.9% of total 1985-86 Program expenditures and 42.4% of total person-years.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

	21,436	338	18,767	342	2,669	(4)

The difference between actual expenditures and the Main Estimates resulted mainly from the following items:

	($ million)
• approval in Supplementary Estimates of the extension of the Labour Education Program and other miscellaneous items;	4.5
• lapses due mainly to fewer than anticipated quality of working life contributions and a reduction in the contribution to the Canadian Labour Congress labour education program; and	(0.9)
• reallocation of funds to offset cost overruns in other activities.	(0.9)

Description

General Labour Services involves the development and administration of legislated programs directed towards a safe and healthy working environment, and fair and equitable opportunities in employment; and the promotion and implementation of non-legislated activities aimed at constructive relationships between labour and management, and a better informed work force on union and socio-economic affairs.

Within General Labour Services, three components have been identified as the basis for management accountability. These are: Legislative Programs; Non-Legislative Programs; and Policy Development/ Management and Administration.

Legislative Programs: This component involves operations intended to enforce compliance with provisions of Parts III and IV of the Canada Labour Code and the Fair Wages and Hours of Labour Act. The operations undertaken are inspections, investigation of complaints and accidents, technical surveys of work environments, and the establishment of safety and health committees in enterprises under federal jurisdiction, as well as the program development and technical support related to compliance.

Non-legislative Programs: This component involves operations which are advisory, promotional and educational. The intent is to achieve positive attitudinal changes toward the workplace, and better understanding among members of labour organizations of the roles of the various participants in the industrial relations system. This work is carried out through a Quality of Working Life program and the provision of Labour Education grants and contributions.

Policy Development/Management and Administration: This component involves the provision of administrative support, and policy development and management to the Legislative and Non-Legislative Programs.

Performance Information/Resource Justification

Legislative Programs: This component will require $14,824,000 and 283 person-years to perform its function.

Workload: The measurable workload of this component is based on three indicators: Complaint Activities, which involve the investigation of complaints respecting conditions of work and occupational safety and health matters, unjust dismissal conciliations, accident investigations, and refusal to work; Inspection Activities, which involve conducting inspections to increase compliance with the legislation; and Safety and Health Committees, which involve ensuring the establishment of Safety and Health Committees in enterprises under federal jurisdiction. In Figures 14, 15, and 16, these indicators are expressed in terms of workload trends.

Figure 14: Complaint Activities

Figure 15: Inspection Activities

Figure 16: Safety and Health Committees

Although there is an upward trend in the area of complaints, a slight reduction in the number of inspections is anticipated for 1985-86, which is partly attributable to the additional time and effort that will be consumed in activities related to the establishment and monitoring of Safety and Health Committees as a result of passage of Bill C-34.

The number of Safety and Health Committees to be established in 1984-85 is lower than originally estimated. This is mainly due to the delay in the proclamation of amendments to the Code. In anticipation of the above, extensive training on committee implementation and monitoring has been undertaken and will continue throughout 1985-86.

Efficiency: Figure 17 provides an indication of efficiency trends that relate to the two major groups of activities — complaints and inspections -- and to the person-years directly devoted to them (LAO time).

Figure 17: Complaint and Inspection Cases Settled per Person-Year

The beginning of the decade saw a significant increase in the number of Labour Affairs Officers. General training of these new officers, combined with the concentrated effort to finalize cross-training to provide a generalist approach to case resolution (introduced in the mid-1970s), led to a slight downward trend in output per person-year in 1981-82 and stabilized. No significant change, therefore, is foreseen in the number of cases settled per person-year between 1983-84 and 1985-86.

0489

The average completion time for an inspection is presently 1.5 days; complaints concerning unjust dismissal are usually resolved in four to five days, while the average time to handle a complaint on failure to pay wages is ten days. A current study of our person-year utilization in the above activity sectors is expected to produce data on the percentage of officer time spent by activity. Such information, when available, will assist the program management in setting productivity standards and targets.

Non-legislative Programs: This component involves the administration of the Quality of Working Life Program and the Labour Education Program. It will require $8,376,000 and 18 person-years to perform its function.

The Quality of Working Life (QWL) program, which is aimed at improving employee work satisfaction and organization productivity and effectiveness, is part of Labour Canada's broad strategy for promoting responsible labour-management relations and the well-being of Canadian workers. Promotional, educational and experimental in nature, the program seeks to encourage and support workplace innovation in response to changing economic and social conditions. Because of the develop mental nature of many organizational improvement projects, "action-learning" is an essential program feature. To this end, organizations are encouraged to closely monitor and evaluate their experiences and report on results achieved. In this way, other organizations may learn from existing experiments and be encouraged to innovate. The publication of relevant QWL case studies is an important program component in this regard.

In 1981 the program was expanded and extended for a period of five years, with the realization that before increasing numbers of successful organizational change demonstration projects could be anticipated, general awareness of the values and processes underlying Quality of Working Life had to be raised, and a supportive infrastructure created. Four main program thrusts were identified, and activities in all four areas undertaken simultaneously. These activities and the anticipated financial resources, provided on a contribution basis, for 1984-85 and 1985-86 are outlined in Figure 18 on the next page.

Figure 18: Quality of Working Life Contributions Budget ($000)

Thrusts - Main Program Activities	1984-85	1985-86
Promotional and awareness-raising activities (conferences, workshops)	70	50
Development of knowledge and skills (publications, development of courses, training bursaries)	180	155
Supportive networks and institutions (QWL Centres)	200	200
Change projects undertaken by organizations	335	250
	785	655

Performance indicators fall under two main headings, quantitative and qualitative, which flow from the "action-learning" objectives of the QWL program. A primary quantitative "action-oriented" performance indicator is the number of "Change projects undertaken by organizations" (see Figure 18) resulting from the program. QWL site implementations have shown substantial growth over the past two years, from 3% of the budget in 1981-82 to 34% of the budget in 1983-84. This result can be attributed in part to the very real need for productivity improvements experienced by Canadian organizations and the existence of a growing number of supportive institutions able to provide specialized resources in the field of workplace innovation.

Under the qualitative performance indicators, which are "learning-oriented", the results achieved through the application of QWL programs within organizations will be analyzed by the careful monitoring and evaluation of projects in order to establish baseline data. Qualitative as well as quantitative information will be gathered over the course of the next two years, and preliminary results and conclusions will be published. At the end of the five-year period it will be possible to make comparisons and draw some conclusions as to the effectiveness of a variety of innovative approaches to organizational change and their contribution to the industrial relations climate.

Although the program is national in scope, it must be flexible in its application in order to respond to regional needs and priorities. Starting in 1983-84, a Regional Budgetary Envelope approach was implemented for the QWL contribution budget, and it is now an integral part of the program planning process.

In addition, there is an operating budget of $278,000 for 1985-86 in support of general program activities such as planning, delivery, management, publications, training and evaluation. This budget is shared between Headquarters and the five regions.

The objective of the Labour Education Program is to create a better informed union membership, stimulate more constructive collective bargaining, and help labour participate more fully and knowledgeably in socio-economic affairs. With respect to this function, six contributions totalling $5,527,000 will be made in 1985-86 to major central labour organizations, and $1,292,000 will be provided to independent unions and individual members for education and research projects. The total membership covered by the 1983-84 fund distribution represents 3.2 million of the 3.6 million unionized workers in Canada. Bursaries were granted to eleven individual union members to enroll in labour education courses or to conduct research projects.

Embodied in the new contracts with central labour organizations are requirements for the submission of a quarterly cash flow forecast, a quarterly accounting of receipts and expenditures, annual audits and activity reports. The courses provided by the recipients include a wide variety of subjects such as collective bargaining, steward training, parliamentary procedures, union administration, negotiation skills, conciliation and arbitration procedures, occupational health and safety, women in the workplace, economic issues, labour legislation, leadership and public relations.

The Labour Education Program is scheduled to terminate March 31, 1986. An independent evaluation of the program, planned for 1984-85 is now underway and is to be completed by March 1985. Subject to a positive evaluation, a proposal will be made to extend the program.

Figure 19 on the following page, shows the distribution of funds in 1983-84 and 1984-85, and the proposed allocation of the funds for 1985-86.

Figure 19: Distribution of Labour Education Funds by Organization

	1983-84	1984-85	1985-86
Canadian Labour Congress	$3,378,631	$3,901,324	$4,291,000
Confederation of National Trade Unions	323,141	345,780	398,500
Canadian Federation of Labour	317,236	361,332	398,500
Canadian Conference of Teamsters	141,479	140,992	171,500
Centrale de l'enseignement du Québec	129,005	145,778	161,500
Centrale des syndicats démocratiques	84,911	96,266	106,000
Independent Unions	585,675	974,000	1,167,000
Individual Union Members (bursaries)	50,000	95,000	125,000
	$5,010,078	$6,060,472	$6,819,000

Policy Development/Management and Administration: The proportion of resources devoted to this component is shown in Figure 20, as a percentage of the resources of the total General Labour Services Activity. These administrative and policy support functions are best expressed as a percentage since their resource allocation is largely dependent on the workloads described in the two previous components.

Figure 20: Policy Development/Management and Administration Resources as a Percentage of Total Activity Resources

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Person-Years	50 (14%)	49 (15%)	66 (20%)
Expenditures ($000)	2,992 (11%)	3,032 (13%)	3,271 (15%)

C. Policy and Communications

Objectives

To provide policy direction and management of the Labour Program; to provide analysis, research and information on labour matters; to participate in international labour bodies; to communicate Labour Canada programs and policies; to promote constructive labour relations and improvements in the situation of women in their pursuit of equality in the workplace.

Specific plans for 1985-86 include:

- management of the Labour-Government Employee Secondment Program, the Technology Impact Research Fund, and Technology Education Seminars.

- the development and implementation of significant changes in the quality and quantity of data collection and analysis, including new statistical concepts for reporting wage and non-wage benefits in collective agreements, the inclusion in the data base of agreements covering fewer than 500 employees, the analysis of unit costs of labour for wage and non-wage provisions, and an analysis of agreements at the micro level in order to provide effective input into policy development on social, economic and legislative issues by government departments.

- preparation for a federal-provincial ministerial conference on selected labour issues, to be held in 1985-86.

- planning and development of a labour issues component in the federal government pavilion at Expo 86 in Vancouver.

- a major revision of the publication "Women in the Labour Force", aimed at refining and refocussing the statistical information provided therein, and ensuring its publication on an annual basis.

- organization of the forthcoming International Labour Organization (ILO) Americas Regional Conference and duties associated with membership on the Governing Body of the ILO. This conference, which will be hosted by Canada, will focus on rural development, including problems of indigenous populations, labour relations, and general ILO-related developments in the Americas.

Resource Summary

Expenditures for the Policy and Communications Activity will account for approximately 14.4% of total 1985-86 Program expenditures and 22% of total person-years.

Figure 21: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

	15,167	185	9,478	167	5,689	18

Supplementary Estimates were approved for the following items:

	($000)
• Canadian Labour Market and Productivity Centre; and	5,000

($000)

- promotion of amendments to the Canada Labour Code and the implementation of changes to the Collective Bargaining Monitoring and Technical Systems. 709

Description

The Policy and Communications Activity involves the provision of analysis, management and direction through the offices of the Minister, the Deputy Minister, and a policy and liaison group; the analysis and development of economic and social policies related to labour issues; the provision and analysis of labour market data; the co-ordination and participation in international and federal-provincial organizations; the promotion and strengthening of the efforts of women to achieve equality in the labour force; and the communication of departmental programs, policies, legislation and services.

Four components are defined: General Management, Policy and Liaison; Central Analytical Services; the Women's Bureau; and Communications.

General Management, Policy and Liaison: This component formulates short-term and long-term objectives and priorities; integrates operational and program areas with goals and strategies; develops and co-ordinates policies promoting a positive climate of labour relations; promotes consultation among organized labour, government and business on labour matters; delivers the Technology Education Seminars and the Technology Impact Research Fund; analyzes the status of part-time workers in the federal jurisdiction and recommends appropriate changes to the Canada Labour Code; undertakes the general management of the Program, analyzes and develops policy on economic and social issues of concern to labour and for liaison with other federal departments, the provinces and international agencies; and co-ordinates Canadian participation in international and interprovincial bodies related to labour affairs, specifically the International Labour Organization (ILO). It consists of the Minister's Office, the Deputy Minister's Office, the Assistant Deputy Minister of Policy's Office, Policy and Liaison, Public Affairs Unit, and the Part-Time Employment Unit.

Three sub-components constitute the Policy and Liaison function: Policy and Strategic Analysis; Federal/Provincial Relations; and International Relations.

Central Analytical Services: This component provides analysis, research, data collection and dissemination, and policy studies in the area of labour economics and industrial relations. It also collects and publishes a wide range of data and information derived from the collective bargaining process.

Three sub-components constitute Central Analytical Services: Labour Data; Economics and Industrial Relations Research; and Industrial Relations Information.

Women's Bureau: This component provides research and policy development, and promotes a positive public dialogue to advance the situation of women in their pursuit of equality in the workplace.

Communications: This component involves the overall planning, development and implementation of a comprehensive communications program for the Department, and the provision of professional and technical communications advice, expertise and assistance to all Program activities.

Performance Information/Resource Justification

General Management, Policy and Liaison: This component will require $10,483,000 and 55 person-years to perform its function. The Policy and Liaison aspect of this component consists of the following three sub-components. It should be noted that the nature of this work does not lend itself readily to formal performance measurement systems. However, ongoing performance is monitored by managers through a regular review of work plans.

Policy and Strategic Analysis: This sub-component will require $7,320,000 and 6 person-years to perform its function.

This unit is responsible for briefings and strategic analyses of social and economic issues related to labour matters. It prepares policy papers and liaises with government and private organizations in matters of productivity, technological change, and pension/retirement policy. It also administers the Technology Impact Research Fund, and provides financial support to the Productivity Branch of the Canadian Labour Market and Productivity Centre.

Federal/Provincial Relations: This subcomponent will require $444,000 and 9 person-years to perform its function.

This area is responsible for the monitoring and analysis of trends and issues pertaining to labour matters in provincial jurisdictions, for the purpose of developing departmental initiatives.

In support of this, the unit maintains a documentation centre supplying analysis and research on Canadian labour legislation to governments and the public. It also acts as the secretariat for the Canadian Association of Administrators of Labour Legislation (CAALL).

International Relations: This sub-component will require $559,000 and 7 person-years to perform its function.

This unit co-ordinates Canadian participation in international labour activities, particularly the International Labour Organization (ILO), co-ordinates the preparation of reports on the application of ILO Conventions ratified by Canada, and manages complaints by Canadian unions to the ILO Freedom of Association Committee. It also organizes attendance at ILO Governing Body meetings of which Canada is a member, and is planning for the forthcoming ILO Americas Regional Conference.

Central Analytical Service: This component will require $5,199,000 and 91 person-years to perform its function. For explanatory purposes it has been divided into three sub-components: Labour Data; Economic and Industrial Relations Research; and Industrial Relations Information.

Labour Data: This sub-component will require $2,558,000 and 56 person-years to perform its function.

Labour Data collects, analyzes, and disseminates labour-related information through a series of regularly published periodicals. The majority of its information comes directly from industrial establishments, unions and collective agreements. In other cases, such as information on work stoppages, statistics are collected through provincial labour departments and/or Employment and Immigration Centres and press clippings.

During 1984-85, the unit established a performance measurement framework to gauge the quantity and quality of each of the statistical tasks. The system will be implemented with performance indicators for fiscal year 1985-86. A publication and project monitoring system was introduced in April 1984, and an inquiries/response monitoring system to measure planned versus actual performance was established in June 1984.

Workload: Major outputs include:

- the production of a Canada-wide survey of wage rates, salaries and hours of labour, resulting in 22 community publications and one all-Canada publication with an annual distribution of 10,000 volumes;

- the annual publication of "Strikes and Lockouts in Canada", showing time lost, dates and major issues in work stoppages by industry and by province, and a monthly report monitoring work stoppages for each month;

- the publication of "Labour Organizations in Canada", an annual directory summarizing data on labour unions, both national and international, and union federations in Canada;

- the maintenance of a collective agreement library of over 8,000 agreements in both federal and provincial jurisdictions;

- the maintenance of computerized data bases providing data on wage and non-wage provisions contained in 1,100 current major collective agreements; and

- the production of statistical and informational publications pertaining to collective bargaining published on a monthly, quarterly, annual and periodic basis.

Economic and Industrial Relations Research: This sub-component will require $1,216,000 and 21 person-years to perform its function.

The work of this unit involves analysis of the impact of economic factors and trends, analysis of industrial relations and socio-economic issues, and assessment of policy and program proposals in terms of consistency with government and Labour Canada priorities and their impact on industrial relations in Canada. This unit produces background studies and research reports for Labour Canada and government officials, specific client groups and the general public. The unit is also responsible for certain aspects of the Labour Adjustment Benefits (LAB) Act, specifically policy review, recommendations to Cabinet on designations, economic analysis of program recipients, and liaison with other departments involved with labour adjustment policy.

Workload: The work of this area is mainly in response to the internal policy and analysis needs of the Labour Program and the needs of other government officials, for example, the submission to the Macdonald Royal Commission. Its workload cannot be forecast with any accuracy, i.e., the number and subject matter of each of the many discussion papers, reports and studies, on various labour economics and industrial relations subjects produced each year are not known in advance. However, selected reports and studies are periodically published and made available to the interested public. In addition, publications based on comparative analysis and research of labour-related legislation are produced annually. Two research-related grants programs are also administered: the Unsolicited Grants Program ($40,000), which supports endeavours by the Department's clientele (such as conferences) that contribute to Labour Canada's objectives; and the University Research Grants Program ($62,000), which encourages and supports research in the field of labour relations and labour economics, particularly by younger scholars.

Industrial Relations Information: This sub-component will require $1,126,000 and 10 person-years to perform its function.

This unit provides an information service for individuals and organizations in the industrial relations field by drawing on this Activity's information sources and data banks and other government and

private sector sources. This sub-component also administers the new Labour-Government Employee Secondment Program, which stimulates and facilitates temporary assignments of staff between labour organizations and the federal public service.

Workload: Since the inception of this service in 1981-82, the level of activity has sustained a request rate about 1,700 to 1,800 requests per annum. It is expected to continue at that rate in 1985-86 as indicated in Figure 23. However, the planned enhancement of the collective agreement data base will generate operating efficiencies by making certain varieties of requests simpler to handle. This will permit a broader range of service to be provided to clients and serve as a base for attracting new clients.

Performance is monitored by periodic follow-up checks with clients. This will be supplemented in 1984-85 by a formal client survey within the target population to establish that the level of service is in keeping with requirements. It is anticipated that this survey will be conducted annually thereafter.

Figure 23: Number of Inquiries/Responses and Promotional Contacts

Women's Bureau: This component will require $1,075,000 and 13 person-years to perform its function.

A large portion of its resources ($221,000) is devoted to research and policy development addressing those factors which hamper equality in the workforce. These factors are identified in part by government priorities and initiatives, but also in response to pressure from constituent groups: women's groups, lobby groups, labour, the general public, and the media. Pressure from interested groups for policy

change in areas such as equal pay for work of equal value, part-time work, technological change, and the health and safety of workers, has increased markedly, and is expected to continue strongly in 1985-86. The Bureau's resources are also devoted to national and international policy development, as demonstrated by its role in formulating the National Plan of Action concerning women, and participation in activities related to the UN Decade of Women. The impact of such research and policy development is long-term, and cannot be evaluated at time of implementation.

The Bureau strives to advance the situation of women in their pursuit of equality in the work force by promoting public awareness, and encouraging discussion of issues of special interest to women. This is done through an information and education program which will require $256,200, and includes conferences and seminars, discussion and informational papers, statistical and general publications, and a Women's Bureau exhibit.

Interest in these events and requests for publications have increased markedly in recent years, and this trend is expected to continue. Figure 24 below, shows the number of Women's Bureau publications requested from 1982-83 to 1985-86. In addition, requests for the Women's Bureau exhibit have increased from three in 1983-84 to ten in 1984-85, and are expected to increase further in 1985-86.

Figure 24: Number of Women's Bureau Publications Provided

Communications: This component will require $1,341,000 and 23 person-years to perform its function.

Effectiveness of the communications process is measured by analysis of attitudinal and awareness shifts among target publics, by monitoring and evaluating public/media reactions and information requests, by assessing public displays and special events, and by conducting awareness/opinion surveys subsequent to specialized advertising programs.

A useful indication of the level of activity of these three components -- General Management, Policy and Liaison; Women's Bureau; and Communications -- is their ratios of person-years and operating dollar costs to the Labour Program total as displayed in Figure 25. In both instances the ratios are expected to remain relatively constant over the next three years.

Figure 25: Policy Related Resources as a Percentage of Total Departmental Resources

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Person-Years	91 (11%)	96 (11%)	90 (11%)
Expenditures ($000)	12,899 (10%)	11,841 (10%)	10,855 (10%)
Expenditures (Excluding $5,000,000 per year for the Canadian Labour Market and Productivity Centre)	7,899 (7%)	6,841 (6%)	5,855 (6%)

D. Labour Adjustment Income Support Program

Objective

To administer the Labour Adjustment Benefits Act.

A specific plan for 1985-86 includes the proposed evaluation of the labour adjustment benefits program.

Resource Summary

Expenditures for the Labour Adjustment Income Support Program Activity will account for approximately 34.9% of total 1985-86 Program expenditures and 0.7% of total person-years.

Figure 26: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Regionally Designated Benefits	9,094	-	7,579	-	3,008	-
Labour Adjustment Review Board and Secretariat	384	6	433	6	363	6
	43,778	6	40,612	6	24,754	6

Past Financial Performance

Figure 27: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Nationally Designated Benefits	21,383	-	8,500	-	12,883	-
Regionally Designated Benefits	3,008	-	8,237	-	(5,229)	-
Labour Adjustment Review Board and Secretariat	363	6	232	3	131	3
	24,754	6	16,969	3	7,785	3

The program was originally conceived as a means of combining newly-introduced regional designations with the general designations that had existed in the textile, clothing, footwear and tanning industries for several years. Prior to 1982, these programs together had never exceeded $4,000,000 in any one year. However, the economic downturn, coupled with increased pressure from imports, resulted in larger and more frequent layoffs in these industries and an unforeseen level of demand.

In the regionally designated industries, on the other hand, the gap between layoff and benefit caused by the requirement to exhaust unemployment insurance, along with higher-than-expected pension levels, have caused benefit payments to be lower than anticipated.

The net result has been that Supplementary Estimates of $8,100,000 were necessary mainly to cover Nationally Designated Benefits and increased administrative costs.

Description

The Labour Adjustment Income Support Program provides payments to assist workers who have been laid off as a result of import competition, industrial restructuring, or severe economic disruption in a designated industry and/or region. There are also related administrative costs for the operation of the Labour Adjustment Review Board.

5203

This Activity provides last-resort income maintenance benefits, and is targeted to a population of older workers who have been laid off from certain industries designated either nationally or regionally. Recipients of labour adjustment benefits have depleted their unemployment insurance entitlement and are generally not well-suited to other adjustment programs or readily employable in other industries because of their age, level of education, and the possession of industry-specific skills resulting from a lengthy one-industry work experience.

Industries are designated because they are undergoing significant non-cyclical economic adjustments. Industries designated nationally are experiencing difficulties flowing from strong import competition and/or restructuring resulting in severe industry-wide unemployment. Those designated regionally are experiencing acute unemployment in the designated region.

Specific individual layoffs under both streams are certified by the Labour Adjustment Review Board. Certified individuals then apply to Employment and Immigration Canada, which establishes their eligibility for receipt of benefits. Costs attributed to the Labour Adjustment Review Board cover the provision of investigative, information dissemination, and other secretariat services.

Within this Activity, three components have been identified: Nationally Designated Benefits; Regionally Designated Benefits; and the Labour Adjustment Review Board and Secretariat.

Performance Information/Resource Justification

This Activity will require $43,778,000 and 6 person-years to perform its function. These resources are necessitated as follows:

Nationally Designated Benefits: There are four industries currently designated under this component: textiles, clothing, tanning, and footwear. Of these, textiles and clothing produce the large majority of beneficiaries. In the clothing industry, large-scale layoffs are continuing into 1984, and the one-year gap between layoff and labour adjustment benefit entitlement caused by unemployment insurance entitlement will probably mean that payments respecting current layoffs will begin in 1985. No decline in benefits is therefore expected.

Regionally Designated Benefits: Benefits under some of the regional designations began to be paid in mid-1983, and grew during 1984-85, again because of the gap created by unemployment insurance entitlements. With the addition of four regional designations under the Modified Industry and Labour Adjustment Program, and the possibility of other new designations under that program, growth can be expected to continue.

Labour Adjustment Review Board and Secretariat: The Board, a quasi-judicial body, makes decisions on applications for certification of layoffs as meeting the criteria under the Labour Adjustment Benefits Act. The major task of the Secretariat is to undertake the investigations leading to Board decisions. Because the program began only in May 1982, performance indicators are still subject to adjustment. However, the following represents the Board's view of appropriate measures for 1985-86.

Workload: Workload is determined by the demand for certification arising out of the economic conditions which affect the designated industries. While it cannot be accurately predicted, it is anticipated that the number of applications for certification will continue to increase during 1985-86 because import competition in textiles and clothing continues to be strong, because of recently created new regional designations, and because the retroactivity provisions of the Labour Adjustment Benefits Act result in investigation of layoffs that took place as long ago as 1978. It is anticipated that only 576 cases can be investigated and heard during 1985-86, given current resource levels.

Effectiveness: Effectiveness is best measured by the rate at which investigations are completed, the objective being to minimize the gap between unemployment insurance and labour adjustment benefits for new beneficiaries. Ideally, the elapsed time between receipt of an application and the completion of an investigation should not be greater than that between meetings of the Board, or approximately six weeks. In the present situation, an unexpectedly high demand has resulted in a backlog, and it is the objective of this component that this situation be rectified to the point where 85% of the cases are completed within six weeks. (Others require more time because of their complexity.) This objective, however, will not be achieved during 1985-86 because current resource levels are insufficient to meet this level of demand.

Efficiency: The norm is 12 completed investigations per officer per month.

E. Injury Compensation Respecting Government Employees and Merchant Seamen

Objective

To administer a federal government employment injury benefits program.

A specific plan for 1985-86 includes the proposed evaluation of the federal government employment injury benefits program.

Resource Summary

Expenditures for this Activity will account for approximately 19.4% of total 1985-86 Program expenditures and 5% of total person-years.

Figure 28: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Government Employees' Compensation	46,320	-	42,496	-	45,360	-
Merchant Seamen's Compensation	14	-	14	-	10	-
Administration	1,336	42	1,374	53	1,682	54
	47,670	42	43,884	53	47,052	54
Less revenue*	23,330	-	21,096	-	15,675	-
Net expenditures	24,340	42	22,788	53	31,377	54

*These revenues are amounts recoverable from Crown agencies to cover compensation and related administrative costs. For further information see Figures 39 and 40, page 62.

Past Financial Performance

Figure 29: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Government Employees' Compensation	45,360	-	51,200	-	(5,840)	-
Merchant Seamen's Compensation	10	-	14	-	(4)	-
Administration	1,682	54	1,575	56	107	(2)
	47,052	54	52,789	56	(5,737)	(2)
Less revenue*	15,675	-	31,100	-	(15,425)	-
Net expenditures	31,377	54	21,689	56	9,688	(2)

*These revenues are amounts recoverable from Crown agencies to cover compensation and related administrative costs.

The difference between actual expenditures and the Main Estimates resulted mainly from outstanding receivables amounting to approximately $9,700,000, the bulk of which was not recovered due to a legal dispute with a major client.

Description

The function of this Activity is to ensure that federal government workers and/or their dependents receive workers' compensation for injuries suffered in the employment pursuant to the Government Employees Compensation Act. Funds are made available to the provincial workers' compensation boards for the handling of claims made by federal government employees. Provision is also made for supplementary compensation payments to certain widows and dependent children of merchant seamen.

Adjudication of claims under the Government Employees Compensation Act is carried out by provincial workers' compensation boards on behalf of the federal government. The benefits awarded by the provincial boards then become statutory payments and are paid to the claimants by the boards on behalf of the federal government. The federal government also covers administrative costs. Costs related to claims by employees of Crown agencies are recoverable from the agencies, while those related to claims by employees of departments are not. Payments under the Merchant Seamen Compensation Act are determined by the Merchant Seamen Compensation Board, which is a federal board, and are paid by the employer of the seamen. Currently eighteen monthly supplementary payments are made by Labour Canada to widows of seamen who were fatally injured prior to May 1, 1965 pursuant to Section 31 of the Act.

Within this Activity, three components have been identified: Government Employees' Compensation; Merchant Seamen's Compensation; and Administration.

Performance Information/Resource Justification

Under the first two components, benefit levels are determined by provincial workers' compensation boards, whose decisions are not under the control of the Program. Total benefit levels are also influenced by the number of accidents and the cost of medical services in the provinces in which they are paid. Nevertheless, program delivery is subject to measures of efficiency and economy, as shown in Figures 30 and 31, respectively. (It should be noted that the mode of calculation employed in Figures 30 and 31 has changed to reflect actual person-year utilization, rather than allocated person-years, which had been applied in previous Program Expenditure Plans.) Projected reductions in person-years account for an increase in the volume of claims being processed per person-year, and a corresponding drop in salaries and operating costs will result in a decrease in the unit cost of processing claims. The average time required for the initial processing of accident reports from employers, prior to being forwarded to the provincial Boards, remains 24 hours.

Figure 30: Claims Processed Per Person-Year

Figure 31: Cost of Processing ($) Per Claim

F. Administration

Objective

To provide human resources planning, financial services and advice, corporate planning and evaluation, information processing and storage, data and word processing services, library services, and the services of security and general administration.

A specific plan for 1985-86 includes the performance of a feasibility study concerning the possible automation of the accounting and commitment control functions.

Resource Summary

Expenditures for the Administration Activity will account for approximately 7.2% of total 1985-86 Program expenditures and 21.5% of total person-years.

Figure 32: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Services, Advice and Assistance	4,817	112	5,226	117	3,441	77
Technical Support Services	1,468	15	1,575	20	2,806	60
Information	2,777	51	2,315	51	2,288	52
	9,062	178	9,116	188	8,535	189

Past Financial Performance

Figure 33: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Services, Advice and Assistance	3,441	77	3,348	72	93	5
Technical Support Services	2,806	60	2,388	59	418	1
Information	2,288	52	2,081	51	207	1
	8,535	189	7,817	182	718	7

The difference between actual expenditures and the Main Estimates was mainly due to Supplementary Estimates in the amount of $400,000 for the centralized distribution of departmental publications and various other administrative requirements. The remaining variance of $300,000 was offset by reallocations from other activities.

Description

The provision of advisory and support services to the Department including administrative, financial, personnel, data and word processing, corporate planning, program evaluation and internal audit, library and security services.

Three components have been identified: Services, Advice and Assistance; Technical Support Services; and Information.

Services, Advice and Assistance: This component is composed of the overall management of the Administration Activity and centralized common services, including those of an advisory nature and those that ensure the continued implementation of management systems to serve both senior management and departmental employees, i.e., personnel, finance, corporate planning, evaluation, and security.

Technical Support Services: This component involves the provision of centralized support services of a technical nature to the Program's activities. These services include publication distribution, materiel services, records management and centralized communications-related services such as telephones, telex, postage and courier.

Information: This component includes departmental data processing services and also encompasses the library which maintains a large permanent collection of books, periodicals, journals, and other materials relevant to the labour field for the use of Labour Canada employees, labour professionals, researchers, and other interested persons.

Performance Information/Resource Justification

Presently, the only overall activity measure of performance thought to be applicable is the trend in the proportion of total resources devoted to Administration.

Administration is planning to maintain its operating costs at 10% or less of the Total Labour Program 1985-86 operating expenditures as shown in Figure

Performance and productivity measures have been addressed in all components of this Activity and will continue to be monitored to assess the effectiveness and the efficiency of the delivery of service. Systems are in place in a number of areas reporting quantifiable workload inputs and outputs. Where possible, workload is related to resource usage, and over a period of time normative standards will be developed to enable a meaningful measure of performance. Examples of measures include: the library monitoring volume with respect to cataloguing, indexing and reference requests; word processing tracking input and output pages; data processing measuring data entry volumes; finance monitoring turnaround time on Workmen's Compensation Board statement processing; and records management recording volume of files issued.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Labour Program expenditures by object are presented in Figure 35.

Figure 35: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	28,728	27,310	26,189
Compensation respecting Public Service Employees and Merchant Seamen	39,240	36,000	38,657
Contributions to employee benefit plans	4,017	3,859	3,762
Other personnel costs	8	8	170
	71,993	67,177	68,778
Goods and services			
Transportation and communications	2,897	2,895	2,564
Information	1,290	1,346	1,341
Provincial administration of Public Service and Merchant Seamen Compensation Legislation	7,080	6,496	6,135
Other professional and special services	4,240	4,375	3,566
Rentals	399	360	335
Purchased repair and upkeep	156	169	135
Utilities, materials and supplies	813	758	653
All other expenditures	979	1,107	1,254
	17,854	17,506	15,983
Total operating	89,847	84,683	84,761
Construction and acquisition of machinery and equipment (Capital)	373	229	521
Transfer payments	58,620	52,767	35,030
	148,840	137,679	120,312
Less receipts and revenues credited to the vote	23,330	21,096	15,675
Total expenditures	125,510	116,583	104,637

2. Personnel Expenditures

Figure 36: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	38	37	28	50,350 - 96,300	62,981
Scientific and Professional

Secretarial, Stenographic and Typing	103	104	96	12,636 - 31,946	22,181
Operational					
General Services	3	2	3	13,253 - 39,988	22,989
Technical					
Drafting and Illustration	2	2	2	15,557 - 40,310	24,570
General Technical	2	3	2	12,635 - 55,682	32,502
Social Science Support	33	34	36	12,635 - 57,764	33,737
Engineering and Scientific Support	6	9	6	14,041 - 50,866	31,483
Other	11	14	13		53,588

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 37: Details of Transfer Payments

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Special research studies in the labour field (Accident prevention)	16,000	16,000	16,000
To support standards-writing associations	10,000	10,000	10,000
To the Canadian Council of Occupational Health Nurses	-	75,000	-
Special research studies in the labour field (Special research)	40,000	40,000	40,000
To support activities which contribute to Labour Canada's objectives	62,000	62,000	61,440
Canadian Labour Market and Productivity Centre	5,000,000	5,000,000	5,000,000
To provide financial assistance to labour organizations and central labour bodies in staging educational events	10,000	10,000	-
To Commonwealth Trade Union Council	-	20,000	40,000
Labour adjustment benefits	43,394,000	40,179,000	24,390,834
Merchant Seamen Compensation	14,000	14,000	9,460
	48,546,000	45,426,000	29,567,734
Contributions			
To the Canadian Labour Congress labour education programs	3,892,000	3,538,324	3,056,131
To labour organizations not affiliated with the Canadian Labour Congress to promote and upgrade labour education programs	1,236,000	1,090,148	995,772
To labour unions not affiliated with a central labour organization and to individual union members for labour education	1,292,000	1,069,000	635,675
Quality of Working Life Projects	655,000	710,258	430,517
Atlantic Region Labour Education Centre	399,000	363,000	322,500
Technology Impact Research Fund	2,010,000	410,000	-
Labour-Government Employee Secondment Program	500,000	160,000	-
Youth Summer Job Program	-	-	22,442
	10,074,000	7,340,730	5,463,037
	58,620,000	52,766,730	35,030,771

Transfer payments of $58,620,000 for Estimates 1985-86 include grants for the statutory programs Labour adjustment benefits ($43,394,000) and Merchant Seamen Compensation ($14,000).

B. Cost Analysis

Figure 38: Net Program Costs ($000)

	1985-86 Operating Expendi-tures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Total 1984-85
Total Labour Program	148,840	5,084[1]	153,924	23,330	130,594	124,142[2]

[1]Other Costs of $5,084,000 consist of: ($000)

- Accommodation provided without charge by Public Works 4,410
- Employer's share of insurance premiums and costs provided without charge by Treasury Board 560
- Common services provided without charge by Supply and Services 81
- Workers' compensation benefits provided without charge by this Department 33

[2]This is composed of:

- 1984-85 Main Estimates 95,165
- 1984-85 Supplementary Estimates "B" 23,448
- Other services provided to Labour Program without charge in 1984-85 5,529

C. Revenue Analysis

Figure 39: Receipts and Revenues Credited to the Vote ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Amounts Recoverable from Crown Agencies Respecting Payments of Injury Compensation	23,330	21,096	15,675
	23,330	21,096	15,675

These receipts and revenues are directly credited to the vote. Compensation payments to injured employees of Crown agencies and the attendant administrative costs are recovered from the agencies and credited to the vote. Payments to injured employees of government departments are not recovered from the departments.

An indication of the relative amounts received from Crown agencies is shown in Figure 40.

Figure 40: 1983-84 Recoveries ($000) from Crown Agencies by Major Client

Cape Breton Development Corporation	7,691
Canada Post Corporation	3,382
Eldorado Resources Limited	1,045
Canada Ports Corporation	710
Atomic Energy of Canada	484
Other Clients	1,503
Sub-total	14,815
Recoveries from responsible third parties	859
Other Recoveries	1
Total Recoveries	15,675

D. Dispute Resolution Process

The terms and conditions of employment for employees represented by a bargaining agent are established by means of a collective agreement reached through the process of collective bargaining with the employer. Collective agreements are for a fixed period of not less than one year and are subject to renegotiation upon expiry.

If the parties are unable to agree upon settlement terms for either a first or a renewal collective agreement through direct negotiation, either party may forward a notice of dispute to the Minister of Labour. The effect of this notice is to provide the Minister with the opportunity to select from a range of options designed to encourage a resolution of the dispute. In most cases, a conciliation officer is appointed to assist the parties to deal with their dispute. "Conciliation" is a persuasive process which relies on a full exploration of alternatives to resolve differences. During the conciliation process, the parties do not have the legal right to engage in strike or lockout activity.

If the conciliation officer is not able to assist the parties in resolving their dispute, he/she files a report to that effect. Upon receipt of the conciliation officer's report, the Minister may decide to terminate the conciliation process. A decision of this nature has the effect of placing the parties in a legal position to strike or lock out seven days following the date of the decision.

Alternatively, the Minister may prolong the conciliation process by appointing a conciliation commissioner. A conciliation commissioner is a person from outside the public service who has a recognized expertise in industrial relations. Commissioner proceedings are generally more formal than officer proceedings. Should the conciliation commissioner be unable to assist the parties in reaching a collective agreement, he/she submits a report to the Minister outlining his/her recommendations for settlement of each outstanding issue. The Minister then releases this non-binding report to the parties for their consideration, and the legal right to strike or lock out is acquired seven days from the date of release.

"Preventive mediation" is a term applied to involvement by Federal Mediation and Conciliation Officers during the term of a collective agreement. The aim of preventive mediation is to assist the parties in resolving problems during the life of the agreement in order to prevent them from becoming impediments to settlement at the time of collective bargaining. Through this process, effective labour-management relations are established which promote conflict resolution through negotiation rather than confrontation and thus a more stable labour relations environment.

"Arbitration" is used in federal jurisdiction to resolve differences which arise during the term of an agreement over questions of interpretation or application of the agreement. The legislation requires that collective agreements contain a mechanism for the final resolution of such rights disputes, and the Minister may be called on to appoint an arbitrator to issue a final and binding decision on grievances arising during the term of the agreement.

The legislation also prohibits certain conduct by employers and bargaining agents. Such activities are known as unfair labour practices. Although the Canada Labour Relations Board is the authority which determines whether an unfair practice has been committed and what the remedy should be, certain bargaining-related complaints require the consent of the Minister before they can be received by the Board. Officers of the Federal Mediation and Conciliation Service investigate such complaints on behalf of the Minister and attempt to resolve the underlying problem through negotiation.

The Minister also has the power to appoint industrial inquiry commissions to investigate and report on significant industrial relations issues and problems. However, the recommendations of these commissions are not binding on the parties or the government.

E. 1983-84 Main Estimates: Financial Comparison of Restated to Original Financial Plan by Activity

The activity structure was changed effective April 1984. The Past Financial Performance throughout this document has been presented on the basis of the new activity structure. Figure 41 provides a financial reconciliation between the new structure and the old structure that was used in the 1983-84 Main Estimates.

1985–86 Estimates

Part III

Expenditure Plan

2521

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Law Reform Commission of Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $4,831,000 to carry out the planned activities of the Law Reform Commission of Canada Program in 1985-86. Remaining expenditures of $218,000 for pensions and other employee benefits will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Total Program	5,417,000	5,438,000	4,777,096

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

For 1985-86 the Law Reform Commission's highlights are:

- to continue the comprehensive Review of the Criminal Code conducted jointly with the Department of Justice and the Ministry of the Solicitor General. Acceleration of this project was approved by Cabinet effective April 1, 1981, with completion originally scheduled for late 1986. The object of the review is to recommend to Parliament a modern Criminal Code for Canada which truly reflects the contemporary values of Canadian Society. About 51% of the Commission's total research effort, amounting to $881,000 in 1985-86, is devoted to it (see page 9 and Figure 5, page 12);

- to continue the ongoing Protection of Life project addressing many topics and concepts which are relatively new in relation to the law or have attained a much greater perception of importance or urgency in contemporary society. In 1985-86, the focus of research will be the protection of human health and the control of the environment, with criminal law as a potential legal remedy for threats to it. About $441,000 or 25% of the Commission's research effort is devoted to it, showing the emerging importance for the potential needs for changes and new involvement of the law in this area of human activities (see page 9 and Figure 5, page 12);

- to continue the ongoing research project in the field of Administrative Law. In 1985-86 research will concentrate primarily on compliance with administrative policies, powers and procedures of administrative agencies, appeals from administrative decisions, and the special status of the Crown under federal law. About 24% of the Commission's total research effort, amounting to $420,000 will be devoted to this project in 1985-86 (see page 9 and Figure 5, page 12);

- to continue, as the need arises, to study small but significant items of legal reform under the umbrella of "Modernization of Statutes" at a minimal cost; and

- to undertake preliminary research aimed at formulating a new research program in areas of the law in need of reform, such program to be tabled in Parliament in the year 1986-87 for implementation after the completion of Phase I of the Comprehensive and Accelerated Review of the Criminal Code.

2. Financial Summary

Figure 1: Financial Requirements ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Law Reform Commission	5,049	5,013	36
Authorized person-years	47	47	nil

* There is no change in the 1984-85 forecast expenditures from the 1984-85 Main Estimates (Extracts from Part II of the Estimates, page 4).

Explanation of Change: The difference in funding between fiscal year 1985-86 and 1984-85 amounts to less than 1% with, therefore, no significant changes in budget.

B. Recent Performance

1. Highlights

During 1983-84 highlights of the Commission's operations were:

- research in Phase I of the Review of the Criminal Code was accelerated with many new topics being undertaken. Some $864,000 or 51% of the Commission's total research expenditure of $1,694,000, was devoted to this program. The total research expenditure in 1983-84 was 7% less than planned (See Figure 2, page 8);

- in the field of Administrative Law and in Protection of Life, research progress accounted for $424,000 (25%) and $405,000 (24%) respectively; and

- a reorganization involving the appointment of a new President and Vice-President as well as two new Project Coordinators, did, after a short period of adjustment, give a new impetus to all research programs and initiatives.

2. Review of Financial Performance ($000)

Figure 2: Review of 1983-84 Financial Performance

	1983-84		
	Actual	Main Estimates	Change
Law Reform Commission	4,777	5,417	(640)
Authorized Person-Years	45	45	-

Explanation of Change: The difference between funds available through Main Estimates and actual expenditures, $640,000, is due largely to two factors. First, by direction, $102,600 was frozen as a restraint measure; second, $347,000 was transferred to the Department of Justice for their work in the Accelerated Program for Review of the Criminal Code. The balance of underspending amounted to 3.5% of Main Estimates.

C. Background

1. Introduction

Like many other modern legal jurisdictions, Canada has found that the increased complexity of today's society and its accelerated rate of social change have created pressures for new legislation and changes in the law which can best be formulated by an independent body charged with continuing study and review of the laws of Canada, and making recommendations to Parliament through the Minister of Justice. For these reasons, Parliament established the Commission by the Law Reform Commission Act, which came into force on June 1, 1971.

2. Legal Mandate

As defined by the Act, "the objects of the Commission are to study and keep under review on a continuing and systematic basis the statutes and other laws comprising the laws of Canada with a view to making recommendations for their improvement, modernization and reform, including, without limiting the generality of the foregoing:

- the removal of anachronisms and anomalies in the law;
- the reflection in and by the law of the distinctive concepts and institutions of the common law and civil law legal systems in Canada, and the reconciliation of differences in the expression and application of the law arising out of those concepts and institutions;
- the elimination of obsolete laws; and

- the development of new approaches to and new concepts of the law in keeping with and responsive to the changing needs of modern Canadian society and of individual members of that society".

The act was amended by Parliament in 1975 to eliminate the two part-time Commissioners and to increase the number of full-time Commissioners from four to five, including the Chairman and Vice-Chairman. In 1981 another amendment changed the Chairman's and Vice-Chairman's titles in English, respectively to President and Vice-President.

3. Program Objective

The objective of the Law Reform Commission of Canada is to study and keep under review on a continuing and systematic basis the statutes and other laws comprising the laws of Canada with a view to making recommendations for their improvement, modernization and reform.

4. Program Description

Almost all of the Commission's research endeavours fall within three major categories: Administrative Law, Criminal Law, and Protection of Life. The scope of work in Criminal Law is such that it is best handled as two projects; Substantive Criminal Law and Criminal Procedure. The Commission also performs work in the field of Modernization of Statutes but, as this tends to be sporadic, it is not treated as a separate project for planning purposes. The four continuing projects are described below.

Criminal Law (Substantive) Project: This project covers the substance of criminal law i.e. the rules on definitions of offences and the rules on liability, jurisdiction, defences, participation and inchoate crimes.

Criminal Law (Procedure) Project: This project encompasses legal procedures, police prerogatives and powers provided for the investigation, prosecution, trial, sentencing and appeal in criminal offences. It specifies the means by which proscriptions are enforced and punishments imposed.

Protection of Life Project: The focus of this project is upon the subject of environmental pollution. The role of criminal law in protecting the environment and health is of particular concern.

Administrative Law Project: The scope of this project includes studies of the effectiveness of administrative sanctions as well as procedures before administrative tribunals.

5. Program Organization for Delivery

Activity Structure: The Commission has one activity which is synonymous with the program.

Organization Structure: The Commission proper comprises five members; the President, the Vice-President and three Commissioners, all full-time and all appointed by the Governor-in-Council. The President is named in the Law Reform Commission Act as the Chief Executive Officer of the Commission and, accordingly, is responsible for all aspects of policy direction, and execution of the Commission's activities both in the research program and in its administrative functions. The Vice-President is empowered to act in the same capacity in the absence of the President. All Commissioners, including the President and Vice-President are fully involved in the research program and all publications and recommendations for reform action are given consideration by the Commissioners in plenary meetings. The Vice-President and three Commissioners have, each, direct responsibility for direction and supervision of a specific main project, with the President exercising general supervision over the whole program. Five person-years are required to provide secretarial support for these members.

The Commission Secretary, the senior public servant, reports directly to the President. He acts as adviser to the President on the formulation and execution of the research program, and related public consultation programs, he sets and monitors the standard of language used in Commission publications and correspondence, provides expert advice on the subject of the Commission's relations with other government organizations and with the public at large, and exercises a general direction over administrative policy matters. Five person-years are needed to provide the Secretary with support for secretarial services, assistance for coordination of research projects, and organization for consultations.

The Director of Operations, who controls a staff of 30, reports to the President also. In consultation with the Commission Secretary, he is responsible for formulation of administrative policy, for financial planning and control, and for overall efficiency of the personnel management system and such supporting facilities as the library, text processing, publication distribution, translation, records and accounts.

The distribution of resources by organization is depicted in Figure 3, page 11.

In addition to its allotment of 47 person-years, the Commission engages the services of a varying number of consultants under contract for research in law, in accordance with sub-section 7(2) of the Law

Reform Commission Act. Temporary assistants are also engaged, as required, to meet frequently changing needs for secretarial and clerical support.

The Commission obtains, free of charge, from the Department of Justice, some help and advice in the provision of administrative services, with particular reference to financial control and personnel management.

Figure 3: Resources by Organization/Activity ($000)

				Total
Law Reform Commission	1,979	576	2,494	5,049
Person-years	6	9*	32	47

* In addition, there is one judge whose salary is not paid through the Commission's vote.

Major projects in progress which will continue during 1985-86 and the resources which will be allocated to them are shown in Figure 4.

Figure 4: Personnel Resources by Projects

Project	Consultants		Permanent Staff	Total
	Full-time	Part-time

Administrative Law	420,000
	1,742,000

* The Criminal Law project is divided into two projects, one dealing with the substantive aspects of criminal law and the other dealing with criminal procedures. The total of resources allocated to both projects is shown here.

D. Planning Perspective and Performance Review

1. Environment

The Commission's program is in large part influenced by the following factors:

Legal Research: Basic research in most fields of law is, at best, a complex undertaking which is difficult to measure in terms of time requirements. Historical analyses and case studies are required, both of Canadian and foreign jurisdictions, and most often then not without the benefit of appropriate statistical data. Yet, thorough research is necessary for the Commission to arrive at reform proposals which are sound in law, an improvement over the present law, and suited to Canadian society of today.

Legislation and Judicial Interpretation: The program is governed by the Law Reform Commission Act which directs that new approaches to, and new concepts of, the law be developed in keeping with and being responsive to the changing needs of modern Canadian society and of individual members of society. New legislation, in particular fundamental laws such as the new Constitution and Canadian Charter of Rights and Freedoms, directly affects the content and nature of the program's endeavours. Much in the same way, major decisions by the Appeal Courts, in particular the Supreme Court of Canada, influence research activities and may cause a revision of work which is already at an advanced stage. As well, law reform in other jurisdictions, including abroad, must be monitored and taken into account. This is facilitated to some degree through a scheme of exchange of research papers between law reform agencies around the world.

Public Standards: The changing values and standards of Canadian society in general, and the individual in particular, have a direct impact upon the nature and content of the program. Such changes are made known to the Commission through a systematic and thorough program of consultation involving both federal and provincial governments, the judiciary, the legal and other professions, the law enforcement authorities, public interest groups and the general public. The growing demand for consultation has a direct effect on cost of publications, travel and related expenses.

New Government Policies: Government policy with respect to the purpose and principles of criminal law in Canadian society has a direct and profound bearing on the Commission's work in that field of law. The time-table originally established for the Accelerated Review of the Criminal Code and the close coordination required between Phase I of the Review, conducted by the Commission, and Phase II, conducted by the Department of Justice and the Ministry of the Solicitor General, add to the complexity of the program.

2. Initiatives

Initiatives planned for 1985-86 relate to a diversification and sophistication of the consultation process coupled with an intensification of public participation in law reform. These undertakings will not require additional resources but will be funded through budgetary reallocations.

In pursuing these efforts the Commission will focus on the following:

- in addition to the continuing and systematic consultation of the legal and law enforcement community, steps have been taken to extend consultation to other public interest groups such as women, native people, churches and, for particular topics, to sport organizations, environmentalists and so on;

- regional activities for research, consultation and public participation are being developed in British Columbia, Ontario and New Brunswick in addition to those already in place in Québec;

- liaison officers have been appointed in all law schools with the aim to achieve greater participation by the academic community;

- for the benefit of the legal community and the advancement of scholarly knowledge, efforts are made to interest publishers of law books and law journals to publish some of the excellent research materials and studies produced through the Commission but not published directly by the Commission because of budgetary constraints;

- in association with the Canadian Bar Association, the Commission will mark Law Day 1985 through a series of events, including an Essay Contest in Canadian universities on the topic, "A New Criminal Code for Canada?"; and

- the Commission will for the second year, conduct a summer internship program for law students intended to aid in developing excellence in legal research and to provide for law reformers in future years.

3. Update on Previously Reported Initiatives

In 1983-84, the Commission released a total of eleven publications, including four Reports to Parliament, five Working Papers and two Study Papers. These publications cost $271,688 in total, which was $5,688 higher than planned.

The Reports covered the following topics:

- Writs of Assistance and Telewarrants

- Investigative Tests - Alcohol, Drugs and Driving Offences

- Disclosure by the Prosecution

- Euthanasia, Aiding Suicide and Cessation of Treatment

The Working Papers discussed the following topics:

- Police Powers - Search and Seizure in Criminal Law Enforcement
- Questioning Suspects
- Investigative Tests
- Vandalism
- Homicide

Two study papers were released:

- Maurice H. Smith, Origins of Writ of Assistance Search in England, and Its Historical Background in Canada
- Neil Brooks, Pretrial Eyewitness Identification Procedures

Work was proceeding, by the end of 1983-84, on some 28 other topics, including 6 nearing completion.

4. Program Effectiveness

The Commission has developed projects designed to conduct research into all aspects of a particular area of law by addressing individual topics in an ordered and logical sequence. From this process the Commission has produced, since 1975, 23 Reports to Parliament dealing with a variety of Criminal Law, Protection of Life, Administrative Law, Family Law and Modernization of Statutes topics. A list of these appears under Additional Information at the end of this document.

Through the Reports to Parliament the program has an influence in four principal spheres; the legislative, the judicial, the administrative, and the general public receptiveness to law reform.

Legislative Sphere: Many of the Commission's recommendations set out in its 23 Reports to Parliament issued up to November 1984, have been incorporated in government and private members' bills. The action taken in the case of each Report is described in the list which appears under Additional Information on page 24.

Judicial Sphere: The Commission's work, because of the widespread dissemination of its publications among the judiciary and the legal profession, has frequently attracted judicial notice in court proceedings. We have been able to trace over eighty reported court decisions which by mid-1984 had made reference to, and in most instances adopted, the Commission's views in the last few years. Many of these decisions thus in effect impart to those Commission's recommendations virtually the same force of law, as if they had been enacted by Parliament.

The Supreme Court of Canada has frequently cited Commission's Reports in its reasons for judgment. For example, in the criminal law field, in R. v. Sault Ste. Marie [1978] 2 S.C.R. 1299, Mr. Justice Dickson referred to the Commission's Working Paper on Strict Liability as he decided inter alia that an accused person should not normally be convicted of a public welfare offence if he is able to establish that he exercised due diligence. In R. v. Zelensky [1978] 2 S.C.R. 940, the court held that, as part of the sentencing process, a criminal court could constitutionally award restitution. Chief Justice Laskin cited the "relevant observations" of the Commission's work to the effect that restitution should play a more important role in the sentencing process.

In the evidence area, the Supreme Court of Canada has also relied on Commission work in reaching its decisions. For example, in R. v. Vetrovec and Gaja [1982] 1 S.C.R. 811, Mr. Justice Dickson, after referring to the Commission's plea for the simplification of the law of corroboration contained in its report on Evidence, did just that and held that the testimony of an accomplice should be treated in the same way as that of any other witness. This holding was tempered by noting that it might be wise to caution a jury to look for additional evidence in certain types of situations. Similarly, in Graat v. The Queen [1982] 2 S.C.R. 819 the Supreme Court of Canada referred to the Commission's report on Evidence which urged that a non-expert witness be permitted to offer opinion evidence if it is based on facts perceived by the witness. In another case, R. v. Konkin (1983), 3 C.C.C. (3d) 289, Madame Justice Wilson, in her dissenting opinion, referred to the recommendation of the Law Reform Commission that the questioning of a complainant in a rape case in relation to sexual conduct with other men should be prohibited.

As for family law, the Supreme Court of Canada in its recent maintenance case of Messier v. Delage (1984) 2 D.L.R. (4th) 1, referred to Commission work on the subject. Mr. Justice Chouinard quoted from the case of Marcus v. Marcus [1977] 4 W.W.R. 458 (8 C.C.A.) in which that court mentioned that the Commission's "learned discussion of the law and recommendations on changes in the law are useful in clarifying the issues which arise before the courts and may well be helpful in that they offer examples of current thought upon the subject". Mr. Justice Lamer, in his dissent, also quoted extensively from the Working Paper on Maintenance on Divorce.

Courts at all other levels in the judicial hierarchy have also relied on Commission publications as authorities. In the last year alone, Commission work was cited in at least 14 reported decisions. For example, Mr. Justice G.A. Martin, writing for a unanimous Ontario Court of Appeal decision in R. v. Rao (May 16, 1984), referred to the Working Paper on Search and Seizure on six separate occasions. The court, noting that "the Law Reform Commission of Canada has recommended the elimination of warrantless searches of private premises subject to specific exceptions", held that evidence obtained by a warrantless

search would be inadmissible unless it was highly impractical to obtain one. The P.E.I. Court of Appeal in R. v. Carroll (1983), 4 C.C.C. (3d) 131, held unconstitutional the reverse onus clause of s.8 of the Narcotics Control Act, citing inter alia, the Commission's study paper on Burdens of Proof and Presumptions.

The reliance on the Commission's research and recommendations by courts of every level across Canada is an indication of the respect given to the Commission's work. Further examples are shown under Additional Information on page 30.

Administrative Sphere: Many of the Commission's views and recommendations lead to administrative changes which are beneficial to the administration of justice, the regulatory process and the citizens of Canada. Although these changes are not easy to monitor, some examples include the more general recourse to discovery in lieu of or in addition to the preliminary inquiry in criminal cases, a practice advocated by the Commission; the implementation of a majority of the Commission's administrative recommendations concerning unemployment insurance by the department concerned; administrative streamlining by the Bank of Canada in accordance with recommendations by the Commission; early notice of right of appeal to the Federal Court given by the Tariff Board to the party affected by an unfavorable decision, and many suggestions and recommendations taken into account by such agencies as the CRTC, the Canada Labour Relations Board, the Canadian Transport Commission and the Atomic Energy Control Board, particularly with regard to public participation. All of these were derived from Commission's working papers and study papers.

In its recent Working Paper on Questioning Suspects, the Commission recommended that the questioning of suspects in police stations or prisons should be electronically recorded wherever feasible, either by audio-tape or video-tape, as is already being done in several American jurisdictions, with encouraging results. Even before any legislation is enacted, the Commission has engaged in active discussions with the police in Ontario and Québec, which it is hoped will lead to the establishment of video-taping experiments on a voluntary basis without legislation. If the experiments are successful in expediting the criminal trial and reducing allegations of police misconduct, it is likely that police practices across Canada will change dramatically in the years ahead, even if legislation is not enacted.

Public Receptiveness: The interest shown by the general public in the work of the Commission can be measured, although imperfectly, by the increased demand for Commission's publications and the attention and, in most cases, support shown by the media in the many recommendations put forward by the Commission.

In the last year, the number of groups and individuals on the Commission mailing list showed a net increase of 1146 or 9%. During the same period, 186,568 copies of publications were distributed, a 35% increase over the previous year. Through information booths set up at various conferences and public events throughout the country for a total of 37 days, the Commission distributed over 55,000 information sheets highlighting the work of the Commission.

Media coverage also shows a steady increase and dozens of editorials are indicative of the accrued public interest and support for most of the Commission's recommendations. For instance, the Commission's position concerning euthanasia received strong support in the press, in general, and the specialized press, in particular. Other examples are the Commission's recommendations with regard to the creation of a new offence of criminal intoxication, the decriminalization of defamatory libel, the abolition of writs of assistance and the introduction of telephonic warrants.

5. Performance Information/Resource Justification

Major outputs of the Law Reform Commission's program are Working Papers and Reports to Parliament. Working Papers are statements of the Commission's law reform research at the time of publication and they contain tentative recommendations for reform in a particular area. The purpose of the Working Paper is to elicit comment and provide a vehicle for public consultation. Reports to Parliament, which contain the final recommendations of the Commission for reform in a particular area, are submitted to the Minister of Justice who, in turn, is required by the Law Reform Commission Act to cause each Report to be laid before Parliament within fifteen days of his receiving it, or if Parliament is not then sitting, within fifteen days after Parliament next commences sitting. In some cases, in order to collect and collate current knowledge of a topic, Study Papers are prepared by the Commission as the basis for research leading to a Working Paper.

Study Papers, as needed, Working Papers, and Reports to Parliament addressing topics within their area of study are produced by each of the four projects.

The table below shows the number of publications planned for release during 1985-86 and 1984-85, as well as the number of titles released during 1983-84.

Figure 6: Publications

Projects	1985-86 Estimated			1984-85 Forecast			1983-84 Actual		
	Study Papers	Working Papers	Reports	Study Papers	Working Papers	Reports	Study Papers	Working Papers	Reports
Criminal Law									
Substantive	-	6	1	-	4	-	1	2	-
Procedure	2	6	3	-	4	4	2	2	2
Protection of Life	1	5	2	2	1	-	-	-	1
Administrative Law	-	4	-	-	1	1	1	-	-
General	-	-	1	-	-	1	-	-	1
	3	21	7	2	10	6	4	4	4

Study of the following topics should be completed during 1985-86.

Criminal Law (Substantive) Project: One Report to Parliament on Corporate Criminal Liability will be released in 1985-86. Seven Working Papers addressing the following topics are scheduled to be published in the same year:

- Bigamy and Polygamy
- Application of the Criminal Code as Regards Time
- Conspiracy
- Secondary Liability
- Offences against the Security of the State
- Threats and Intimidation
- Procedural Defences

Criminal Law (Procedure) Project: In 1985-86, three Reports to Parliament will be published dealing with the following topics:

- Post-Seizure Procedures
- Electro[illegible] Surveillance
- Arrest

Also scheduled to be published are the following Working Papers:

- General Principles of Criminal Procedure
- Classification of Offences
- Private Prosecution
- Electronic Surveillance
- Trial and Appeal Procedures
- Criminal Pleadings

In addition, the following two Study Papers are planned:

- Search and Seizure, Extra Code
- Powers of the Attorneys-General

Protection of Life Project: A report to Parliament on Medical Treatment (encompassing results of medical-legal studies in the field of Protection of Life) is planned for tabling in 1985-86. Five working papers on the following topics are scheduled for release:

- Crimes against the Environment
- Consumer Product Pollution
- Pollution in the Work Place
- Policing Pollution
- Human Experimentation

In addition, two study papers are being prepared:

- Jurisdictional and Constitutional Perspective of Environmental Law
- Pesticide Law and Policy in Canada

Administrative Law Project: Four Working Papers are scheduled to be produced in 1985-86 on the following topics:

- Administrative Procedure
- Sanctions and Compliance Policy
- Privileges and Immunity of the Crown in Federal Administrative Law
- Execution of Judgements

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 7: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	1,559	1,475	1,367
Contributions to employee benefit plans	218	202	206
	1,777	1,677	1,573
Goods and Services			
Transportation and communications	475	480	492
Information	545	447	501
Professional and special services	1,934	2,087	1,964
Rentals	81	85	56
Purchased repair and upkeep	12	12	16
Utilities, materials and supplies	155	202	140
All other expenditures	3	4	4
	3,205	3,317	3,173
Total operations	4,982	4,994	4,746
Capital	67	19	31
Total expenditures	5,049	5,013	4,777

2. Personnel Expenditures

Figure 8: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Commissioners	5	5	5		79,544
Scientific and Professional	2	2	2	19,782 - 88,120	52,208
Administrative and Foreign Service and Technical	8	8	8	12,635 - 57,987	36,658
Administrative Support					
Clerical and Regulatory	16	15	15	12,932 - 31,743	21,059
Secretarial, Stenographic, Typing	15	17	15	12,636 - 31,946	22,760
Other	1	-	-		

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 9: Net Cost of Program for 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost 1985-86	Total Cost 1984-85
Law Reform Commission	5,049	461	5,510	5,439

Other costs consist of accommodation provided without charge by the Department of Public Works ($424,000) and other services provided by the Department of Supply and Services ($5,000) and by the Treasury Board ($32,000).

C. Additional Information

1. List of Reports to Parliament, 1972 to 1984

	Subject	Date Transmitted to Minister	Application of Recommendations
1.	Evidence	December 19, 1975	Bill C-242, "An Act to amend the Criminal Code" tabled October 30, 1978 by Mr. Woolliams (LRC Evidence Code, s. 42(1)). Bill C-334, "An Act to amend the Canada Evidence Act" tabled October 30, 1978 by Mr. Orlikow (Code, s. 16(1)). Bill C-21, "An Act to amend the Criminal Code, the Canada Evidence Act and the Parole Act" tabled November 21, 1978 by the Minister of Justice (Code, s. 88). Bill C-462, "An Act to amend the Canada Evidence Act" tabled February 26, 1979 by Mr. Howie (Code, s. 15(1)).

Subject	Date Transmitted to Minister	Application of Recommendations
		Bill C-15, "The Freedom of Information Act" tabled October 24, 1979 by the President of the Privy Council (Code, s. 89(c), s. 43).
		Bill C-362, "An Act to amend the Federal Court Act" tabled October 24, 1979 by Mr. Oberle (Code, s. 43(1), (2)).
		Bill C-365, "An Act to amend the Canada Evidence Act" tabled October 24, 1979 by Mr. Orlikow (Code, s. 16).
		Bill C-384, "An Act to amend the Federal Court Act" tabled October 24, 1979 by Mr. Woolliams (Code, s. 43(1), (2), (4), (5)).
		Bill C-455, "An Act to amend the Criminal Code" tabled October 24, 1979 by Mr. Woolliams (Code, s. 15, s. 42(1)).
		Bill C-202, "An Act to amend the Federal Court Act" tabled May 2, 1980 by Mr. Oberle (Code, s. 43(1), (2)).
		Bill C-238, "An Act to amend the Criminal Code" tabled May 2, 1980 by Mr. Baker (Code, s. 15, 42(1)).
		Bill C-446, "An Act to amend the Canada Evidence Act" tabled May 2, 1980 by Mr. Orlikow (Code, s. 16)).
		Bill C-477, "An Act to amend the Canada Evidence Act" tabled May 2, 1980 by Mr. Howie (Code s. 15(1)).
		Bill C-455, "An Act to amend the Canada Evidence Act" tabled May 2, 1980 by Mr. Beatty (Code, s. 31(h)).

Subject	Date Transmitted to Minister	Application of Recommendations
		An Act to enact the Access to Information Act and the Privacy Act, to amend the Federal Court Act and the Canada Evidence Act and to amend certain other Acts in consequence thereof, S.C. 1980-81-82, c. 111 (Code s. 43(4), s. 89(c)).
		An Act to amend the Criminal Code in relation to sexual offences and other offences against the person and to amend certain other Acts in relation thereto or in consequence thereof, S.C. 1980-81-82-83, c. 125 (Code s. 88(b)).
		Young Offenders Act, S.C. 1980-81-82, c. 110 (Code, s. 16, 51).
		Canadian Charter of Rights and Freedoms, Constitution Act, 1982, Part I of schedule B, Canada Act 1982, c. 11 (U.K., s. 24(2) (Code, s. 15).
		Bill S-33, "An Act to give effect, for Canada, to the Uniform Evidence Act adopted by the Uniform Law Conference of Canada" tabled November 18, 1982 by Senator Olson.
		Bill C-685, "An Act to amend the Criminal Code" tabled May 27, 1983 by Mr. Robinson (Code s. 17(2)).
2. Guidelines-Dispositions and Sentences in the Criminal Process	February 6, 1976	Bill C- 21, "An Act to amend the Criminal Code, the Canada Evidence Act and the Parole Act" tabled November 21, 1978 by the Minister of Justice.
		Young Offenders Act, S.C. 1980-81-82, c. 110 (Code, s. 26, s. 51).

	Subject	Date Transmitted to Minister	Application of Recommendations
			Bill C-682, "An Act to amend the Criminal Code" tabled April 21, 1983 by Mr. Kilgour. Bill C-19, "An Act to amend the Criminal Code..." tabled February 7, 1984 by the Minister of Justice. Publication of a policy paper by the Government of Canada, Sentencing (February, 1984).
3.	Our Criminal Law	March 25, 1976	Publication of a policy paper by the Government of Canada, The Criminal Law in Canadian Society (August, 1982).
4.	Expropriation	April 8, 1976	Amendments to National Energy Board Act (Bill C-60) c. 80, S.C. 1980-81-82-83, assented to December 8, 1981, proclaimed in force March 1, 1983.
5.	Mental Disorder in the Criminal Process	April 13, 1976	Bill C-21, "An Act to amend the Criminal Code, the Canada Evidence Act and the Parole Act", tabled November 21, 1978 by the Minister of Justice.
6.	Family Law	May 4, 1976	Bill C-10, "An Act to amend the Divorce Act" tabled January 19, 1984 by the Minister of Justice.
7.	Sunday Observance	May 19, 1976	Action pending.
8.	The Exigibility to Attachment of Remuneration Payable in Right of Canada	December 19, 1977	Garnishment, Attachment and Pension Diversion Act, S.C. 1980-81-82, c. 100, s. 5.
9.	Criminal Procedure: Part I Miscellaneous	February 23, 1978	Bill C-21, "An Act to amend the Criminal Code, the Canada Evidence Act and the Parole Act", tabled November 21, 1978 by the Minister of Justice.

M-39

Subject	Date Transmitted to Minister	Application of Recommendations
10. Sexual Offences	November 29, 1978	Bill C-44, "An Act to amend the Criminal Code" tabled February 28, 1979 by the Minister of Justice. Bill C-406, "An Act to amend the Criminal Code" tabled May 2, 1980 by Mr. Friesen. Bill C-53, "An Act to amend the Criminal Code" tabled January 12, 1981 by the Minister of Justice. An Act to amend the Criminal Code in relation to sexual offences and other offences against the person and to amend certain other Acts in relation thereto or in consequence thereof, S.C. 1980-81-82-83, c. 125.
11. The Cheque	March 8, 1979	Bill C-19, "An Act to amend the Criminal Code..." tabled February 7, 1984 by the Minister of Justice.
12. Theft and Fraud	March 16, 1979	Bill C-19, "An Act to amend the Criminal Code..." tabled February 7, 1984 by the Minister of Justice.
13. Advisory and Investigatory Commissions	April 18, 1980	Action pending.
14. Judicial Review and the Federal Court	April 25, 1980	Minister of Justice's Draft proposal to amend the Federal Court Act (August 29, 1983).
15. Criteria for the Determination of Death	April 8, 1981	Action pending.
16. The Jury	July 28, 1982	Bill C-19, "An Act to amend the Criminal Code..." tabled February 7, 1984 by the Minister of Justice.

Subject	Date Transmitted to Minister	Application of Recommendations
17. Contempt of Court	August 18, 1982	Bill C-19, "An Act to amend the Criminal Code..." tabled February 7, 1984 by the Minister of Justice.
18. Obtaining Reasons Before Applying for Judicial Scrutiny - Immigration Appeal Board	December 16, 1982	Action pending.
19. Writs of Assistance and Tele-warrants	July 22, 1983	Bill C-19, "An Act to amend the Criminal Code..." tabled February 7, 1984 by the Minister of Justice.
20. Euthanasia, Suicide, Cessation of Treatment	October 11, 1983	Action pending.
21. Investigative Tests: Alcohol Drugs and Driving Offences	November 10, 1983	Bill C-19, "An Act to amend the Criminal Code..." tabled February 7, 1984 by the Minister of Justice.
22. Disclosure by the Prosecution	June 15, 1984	Action pending.
23. Questioning Suspects	November 30, 1984	Action pending.

2. Examples of Courts' Reliance on Commission Research and Recommendations

1. The Quebec Superior Court relied on Commission work in two cases. In Institut Philippe Pinel de Montréal c. Dion [1983] C.S. 438 the report on Mental Disorder in the Criminal Process was cited on the issue of whether a patient in a psychiatric institution has the right to refuse treatment. In A.G. Québec v. Laurendeau (1983), 3 C.C.C. (3d) 250, the court denied a jury in a contempt of court case, relying upon the Commission's report Contempt of Court (1982) in which it was urged that no jury should be allowed in such cases.

M-41

2. The Northwest Territories courts have utilized the Commission work. In Wasylyshyn (1984) 36 C.R., (3d) 143, Mr. Justice Marshall held that advertence was required for recklessness, basing his decision, in part, on Working Paper on the General Part (1982). In R. v. Panarctic Oils Ltd. (1983) 43 A.S.R. 199, the Working Paper on Criminal Responsibility for Group Action (1976) was cited. In R. v. Kusyj (1984), 51 A.R. 243, Working Paper 29 on the General Part was referred to for the proposition that self-defence cannot be used as a cloak for unlawful aggression.

3. Among the other instances in which Commission publications have been cited is R. v. Cyrenne, Cyrenne and Grant (1983) 62 C.C.C. 240, where parents who refused blood transfusions for their dying child were held not guilty of negligence. Fitzgerald D.C.J. quoted from our Working Paper on Medical Treatment and the Criminal Law, describing the role of criminal law in affirming fundamental values and setting limits for tolerable behaviour. The report on Sunday Observance has been quoted to indicate that honouring Sunday is not an exclusively Christian moral doctrine in R. v. Big M Drug Mart [1983] 4 W.W.R. 54.

4. In R. v. Texaco Canada (November 10, 1983) two of our works were quoted: Search and Seizure (1983) and Writs of Assistance and Telewarrants (1983). The definition of search and seizure as found in Working Paper 30, Police Powers - Search and Seizure and Criminal Law Enforcement, was relied upon by Judge Grenier in R. v. Blake (1983), 37 C.R. (3d) 347.

5. In R. v. Perron [1983] C.S.P. 1103, the Commission report on Evidence was used by the court in a field where "... there is little to guide me ..." The court looked at all the surrounding circumstances, as the Report had urged, and held that the evidence must be excluded if its use would bring the administration of justice into disrepute.

In his dissenting reasons, in R. v. Stevens (1984), 7 C.C.C. (3d) 220, Mr. Justice Jones of the Nova Scotia Court of Appeal noted that the Canadian, Commonwealth and American law on the exclusion of illegally obtained evidence is "admirably summarized in the study paper issued by the Law Reform Commission of Canada", entitled The Exclusion of Illegally Obtained Evidence.

Medical Research Council of Canada

1985–86 Estimates

Part III

Expenditure Plan

2351

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Medical Research
Council of Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts provided as an aid in assessing the Program's financial performance.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested to spend $130,308,000 in support of the Medical Research Council during the 1985-86 fiscal year. The remaining expenditures, estimated at $275,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Medical Research Council		
75	Operating expenditures	3,222	3,510
80	Grants and Contributions	127,086	153,191
(S)	Contributions to Employee Benefit Plans	275	269
	Total Program	130,583	156,970

Votes - Wording and Amounts

Vote No.	Department or agency	1985-86 Main Estimates

Total Program	120,772,000	140,801,000	140,439,161

Section 1
Program Overview

A. Plans for 1985-86

1. Highlights

The Main Estimates for 1985-86 indicate an amount of $127.1 million for grants and scholarships which is $26.1 million less than the current year's budget of $153.2 million. This situation reflects the end of a two year period during which the funding of research activity was increased by $50 million following the approval-in-principle of a Five-Year Plan in 1983. (see page 7) If the funding level for grants and scholarships is maintained at $127.1 million, all MRC programs will be reduced with essentially no new intake during the year. (see page 34)

Plans for 1985-86 include:

- The development of a policy and programs to promote the transfer of new knowledge between the universities and industry. (see page 19)
- The review of Program Grants and MRC Groups programs to improve the effectiveness and efficiency in the funding of collaborative research. (see page 19)
- The promotion of public discussion and input in the area of ethics in research and the redrafting of current guidelines on ethics in research involving human experimentation. (see page 19)
- The development of a senior scientist program to complement existing research strength. (see page 19)

2. Financial Summary by Activity

Funding requirements for the Medical Research Council (MRC) for both the Estimates and the current fiscal year are presented by activity in Figure 1.

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Grants and Scholarships	127,086	153,191	(26,105)	23
Administration	3,497	3,779	(282)	29
	130,583	156,970	(26,387)	
Authorized person-years	54	54	0	33

The 1985-86 estimated expenditures of $130,583,410 represent a net decrease of $26.4 million or 16.8% below the 1984-85 forecast. Major items accounting for the change include:

- The $50 million increase in new funds following the approval-in-principle of the Five-Year-Plan in 1983 covered a two year period only, i.e. 1983-84 and 1984-85. As a result, the 1985-86 Estimates for Grants and Scholarships reflect the base budget prior to this increase plus adjustments for inflation during the period as indicated below:

	($000)
- Base budget of 1983-84 prior to approval of new funds.	117,563
- Adjustment for inflation added to the base in 1984-85.(5%)	5,878
- Adjustment for inflation in 1985-86.(3%)	3,702
- MRC contribution for Expo 86 and amount transferred to the National Research Council.	(57)
	127,086

- The new funds approved in 1983 for the Administration Activity included an annual amount of $250,000 in the Administration Vote for the development of a French terminology of scientific terms within the health sciences. This amount is being reduced to $125,000 in 1985-86. In

addition, the salary funds have been adjusted to reflect the current and anticipated classification levels of the 54 person years complement. These two items account for most of the $282,000 reduction in the Administration Activity.

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 are:

- A Five-Year Plan for the MRC was approved in principle including the addition of $50 million in new resources for the two year period i.e. $20 million in 1983-84 and $30 million in 1984-85.

- A new program, MRC Scientist Awards, was initiated and is aimed at providing salary support for five years to outstanding investigators who have recently established their reputation as independent researchers and who wish to devote their full time to health research. Eleven awards were provided during the year. (see page 20)

- Expenditures totalling $13 million were approved to support the purchase of major equipment in health sciences faculties and other health research institutions. Increased funding for the replacement of obsolete equipment and the purchase of advanced technological equipment in order to maintain the capacity of Canadian health scientists to compete internationally and to gain access to new knowledge was a high priority in the Five-Year-Plan. (see page 21)

- The MRC initiated new programs in the field of biotechnology providing salary and operating support to permit the recruitement of additional investigators expert in biotechnological techniques. (see page 21)

- The new funds have enabled Council to allow a normal intake of new researchers and to maintain the levels of support of existing researchers in line with inflation. (see page 20)

- A Standing Committee on Ethics in Experimentation was established to advise Council, as appropriate, in areas of ethics, human and animal experimentation and safety. (see page 13)

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	Main Estimates 1983-84	Total Estimates 1983-84 *	Actual 1983-84	Change
Grants & Scholarships				
Grants-in-Aid	76,040	92,273	92,674	(401)
Other Grant Programs	18,010	21,710	21,754	(44)
Salary Support Programs	8,262	8,447	8,380	67
Research Training Programs	14,364	13,832	13,631	201
Travel & Exchange Programs	406	346	356	(10)
Other	481	705	518	187
	117,563	137,313	137,313	0
Administration				
Personnel Costs	2,204	2,233	1,980	253
Operating Expenditures	1,005	1,255	1,146	109
	3,209	3,488	3,126	362
Total Program	120,772	140,801	140,439	362
Person Years	51	51	50	1

* The Estimates total of $140,801,000 consists of:

Main Estimates 1983-84	$120,772,000
Supplementary Estimates "B" 1983-84	20,000,000
Increase in Contributions to Employee Benefit Plans	29,000
	$140,801,000

- It is the responsibility of Council to distribute the total funds available for Grants and Scholarships. The Estimates provide only a total approved resource level which is allocated at the discretion of the Council.

- The Supplementary Estimates of $20 million resulted from the approval-in-principle of the Five-Year-Plan and represents the first instalment of a $50 million increase over a two-year period. A total of $19,750,000 was affected to Grants and Scholarships with the remaining $250,000 being assigned to the Administration activity for the development of a French terminology of scientific terms in the health sciences and for operating expenditures associated with the increased volume of applications in Grants and Awards.

- All funds approved by Parliament for Grants and Scholarships are fully utilised. Any outstanding balances in specific programs at year end are assigned by Council to support the purchase of major equipment.

- Approximately 10% of the administration funds were allowed to lapse. The person years were almost entirely utilised but staffing was made at a lower classification level than anticipated and some senior level positions were not staffed. The development of the French terminology project was initiated in the last few months of the fiscal year thereby resulting in a lapse of the operating expenditures.

C. Background

1. Introduction

The Medical Research Council of Canada is a federal agency established by Parliament in 1969 to promote, assist and undertake basic, applied and clinical research in Canada in the health sciences, and to act in an advisory capacity to the Minister of Health and Welfare on matters of health research. It was previously under the aegis of the National Research Council of Canada where a formal mechanism for the federal support of medical research was established in 1938. The Medical Research Council reports to Parliament through the Minister of Health and Welfare.

Almost all health science research in Canada is carried out in universities, their affiliated hospitals and institutes. The responsibilities of the Medical Research Council therefore primarily embrace the support of research and research training in the health sciences faculties including the departments and laboratories of the sixteen medical schools, ten dental schools and eight pharmacy schools across the country. It follows that all the research activities funded by MRC are extramural.

The Medical Research Council of Canada is one of three federal agencies which, collectively, have responsibility for the support of research in most areas of endeavour, carried out primarily in Canadian universities. The other two are the Natural Sciences and Engineering Research Council, and the Social Sciences and Humanities Research Council.

2. Legal Mandate

The Council's mandate is based on the authority and responsibility assigned to it under the Medical Research Council Act (R.S., C. M-9). This Act gives the Council authority to:

- promote, assist and undertake basic, applied and clinical research in Canada in the health sciences; and
- advise the Minister in respect of such matters relating to such research as the Minister may refer to the Council for its consideration.

The Act also authorizes the Council to:

- expend any money appropriated by Parliament for the work of the Council or received by the Council through the conduct of its operations.

- publish and sell or otherwise distribute such scholarly, scientific and technical information relating to the work of the Council as the Council considers necessary.

3. **Program Objective**

The objective of the Medical Research Council is to help attain the quality and scale of research in the health sciences essential to the maintenance and improvement of health services.

In addition, the program has sub-objectives that address the training of research investigators in the health sciences and the provision of an adequate research base for education.

4. **Program Organization for Delivery**

Activity Structure: The Medical Research Council Program is divided into two activities; Grants and Scholarships, and Administration. The Grants and Scholarships activity encompasses all of the grants provided by the Council and accounts for 97.3% of the Program's expenditures. It is broken down further into four sub-activities: Grant Programs, Manpower Support Programs, Travel and Exchange and Other Activities. These are described in Section II, Analysis by Activity. (see page 23)

Organization Structure: The Council is comprised of a full-time President, who is also the chief executive officer, and 21 members representative of the scientific and lay community who serve without remuneration and are appointed by the Governor-in-Council. The Council's membership also includes three Associate Members who represent the other two federal granting agencies and the Department of National Health and Welfare. The Council's programs are administered by a secretariat of 54 person-years located in Ottawa.

Recommendations on grants and scholarships to be awarded are made following an extensive examination of applications through a process of peer review. This peer review process consists of 23 grant and six award committees with a total membership of over 250 working scientists drawn chiefly from universities and selected for their knowledge, expertise and experience. These scientists also serve without remuneration with only their travel expenses being reimbursed by the Council. The total time donated annually at no cost to the review of

the applications amounts to over 2,000 working days. The Council also makes wide use of over 5,000 external referees from both Canada and other countries also selected for expertise directly related to the subject of the application. The External referees also serve without remuneration.

The Council is assisted by four Standing Committees chaired by Council members and whose functions are briefly described as follows:

Standing Committee on Research Funding:

- to overview the operations of the Research Funding Programs and to recommend adjustments as appropriate;
- to advise Council on matters relating to research funding;
- to make recommendations for the improvement of the peer review system; and
- to make recommendations for the membership of the various Grant Committees and to establish terms of reference for these Grant Committees.

Standing Committee on Manpower:

- to develop a data base appropriate for future decisions of Council about the training and support of medical research manpower;
- to recommend ways and means of strengthening research manpower in underdeveloped subject areas and clinical research;
- to review the eligibility requirements for the various MRC awards with a view to ensuring better consistency; and
- to make recommendations for the membership of the various Award Committees and to establish terms of reference for these committees.

Standing Committee on Priorities and Planning:

- to advise Council on matters pertaining to the long-range planning, establishment of priorities and development of programs for the MRC;
- to examine trends and issues affecting the future development of health science research in Canada and to make recommendations to Council as to the future role of MRC with respect to these trends and issues; and

- to develop on an annual basis, for Council's consideration, a planning framework which will provide a general orientation or philosophical base for the operations of the other Standing Committees of the Council.

Standing Committee on Ethics in Experimentation:

- to survey the interface between research funded by the Medical Research Council and the concerns of the broader public in areas such as ethics, human and animal experimentation and safety;

- to maintain contact with university committees on research envolving human subjects and biohazards, with organizations such as the Canadian Council on Animal Care, and with other organizations emplementing Council policy in such areas; and

- to advise Council, as appropriate, on policies, on procedures in handling applications for funds and implementing policies on new issues of concern, and on means for addressing those issues.

The Council is also assisted by a number of Advisory Committees on specific areas of national concern such as: Working Group on Nursing Research, Working Group on Research in Tropical and Infectious Diseases, Working Group on Diabetic Research, and a Working Group on the development of a French terminology of scientific terms in the health sciences.

The secretariat, which has the general responsibility for the administration of the Program, is under the direction of the President and is divided into five responsibility areas:

- The President's Office including the Secretary to Council;

- Programs Branch is responsible for the delivery of programs approved by the Council;

- Policy, Planning and Program Development is responsible for initiating and co-ordinating the development of new policies and programs, and for the elaboration of long term plans;

- Public Affairs informs the medical science community and the general public on the programs of the MRC and its contribution to Health Research; and

- Corporate Management is responsible for the provision of central services such as financial, personnel, management information and administrative services.

Figure 3: Organizational Structure

D. Planning Perspective

1. Environment

The Medical Research Council has no laboratories or clinics of its own. Rather, its funds are directed towards universities and affiliated teaching hospitals and research institutes spread across the country. Over the period 1969-70 to 1984-85, the Council's expenditures on research and training have grown from $31 million to over $153 million. During this period the Council has become the agency which provides the largest amount of direct support of basic and clinical research in the health sciences. For 1983-84 we estimated that the direct health research expenditures from all sources was approximately $275 million, with MRC providing 50% of that total.

The application pressure on MRC has increased on all fronts as a result of the increased emphasis, nation-wide, on research and development. The University financial constraints as well as the changing funding patterns of other health research agencies are also contributing to this increased pressure for support.

Applications for grants-in-aid have increased by 73% since 1980-81 while the total number of applications in four specific manpower support programs has increased by 82% during the same period as indicated by the following figure.

Figure 4: Application pressure in Grants-in-Aid and Manpower Support Programs

Scientific and Technical Advances: Several factors have contributed towards the provision of high quality health care for Canadians. One factor is the extensive improvement in sanitation and public health measures which have reduced considerably the incidence and spread of communicable diseases. In addition, major technological advances have occurred which greatly facilitate health care delivery. Research has also led to the control of infectious diseases through vaccines and antibiotics, improved diagnostic and treatment protocols for many diseases including cancer, diabetes and cardiovascular diseases as well as surgical techniques which provide the opportunity for such procedures as successful organ transplantation.

While considerable success has been achieved, a great deal remains to be done. Although the importance of prevention is well recognized and the dangers to health resulting from smoking, alcohol and other specific environmental, occupational and dietary factors have been

identified, detailed knowledge of the cause and effect of many diseases is fragmentary. In fact, we are still ignorant of the basic causation of most diseases, and this constitutes a major impediment to effective treatment and prevention.

Current Research Opportunities: Medical research opportunities are now expanding rapidly and offer exciting promises for new knowledge some of which will be directly applicable to the health care system. In the 1980's, for example, we can examine the brain by means of noninvasive computerized imaging methods such as positron emission tomography (PET) and nuclear magnetic resonance (NMR) and observe the chemical transformations that accompany perceptions and motor movements. Such imaging, in conjunction with new neuropharmacological discoveries could elucidate how the various parts of the brain and nervous system grow, develop and take on specific tasks. Answers to these developmental questions will help us to understand the mechanisms of aberrant cell behaviour and perhaps to discover the root cause of many neurological diseases. Research on microvascular grafts are also promising. These activities will contribute to our understanding and improve our capacity to treat disorders such as Tay-Sachs disease, Parkinson's disease, and the dementias, especially Alzheimer's disease, the incidence of which appears to be increasing dramatically as our population ages.

Fields such as immunology and genetics are also experiencing unparalleled growth. Monoclonal antibodies and genetic probes, for example, have become powerful tools for examining the molecular machinery that regulates cell functions and for exploring the cellular disorders and malfunctions associated with a multitude of health problems. In immunology, new immunosuppressor drugs are proving invaluable in transplantation surgery, especially of kidneys.

Work to identify the fundamental stimulus which transforms ordinary cells into tumours is also continuing. Viral agents are implicated in some cases, but the fundamental lesion appears to rest in the genetic control apparatus of the cell. With new molecular techniques, molecular biologists are investigating specific cancer creating genes called oncogenes in an attempt to explore the mechanism of control, the understanding of which could assist both cancer therapy and prevention.

Improved peptide synthesis and gene cloning are now being applied towards the production of safe, artificial vaccines with unparalleled specificity.

Further research is needed to develop a deeper understanding of the peptides in the nervous system, of the kinins in the intestines and of the recently identified peptides produced by the atrial tissue of the heart and implicated in blood pressure regulation and kidney function.

These are only a few examples of medical research opportunities in which Canada has the ability to make major contributions. Continued research support is essential if Canada expects to participate fully in

the benefits of such research through the maintenance of our high level of medical care and training. Stable and adequate research support is essential to attract and to maintain outstanding individuals in the Canadian health sciences research system.

Health Research System: The role of health research as part of the health system is not an isolated one, directed solely towards the acquisition of new knowledge. Rather, health research is part of a highly integrated system which also includes education (of health professionals as well as scientists), and the provision of health service.

In Canada the three elements, research, education and service, are virtually inseparable. This stems, in part, from the absence of large, national health research institutions and the subsequent development of university-based health research institutions in most regions of the country. The health science faculties of these universities are associated with teaching hospitals which are natural education and service outgrowths of this research milieu.

As the MRC develops its role into the late 1980s and the 1990s several factors affecting its milieu will bear close scrutiny. These are:

Federal-Provincial Aspects: At the present time the Council provides only the direct costs of research in Canadian universities and teaching hospitals. Changes to the Federal/Provincial arrangements which affect the viability of educational institutions could influence the future effectiveness of the Council's programs.

Health Research Funding Sources: The existence of a large number of non-Federal agencies with goals to support both research and training is a manifestation of society's overall desire to solve problems of disease. Over the period 1971-72 to 1983-84 MRC's share of total Canadian research expenditure fell from 61% to 56%. The fact that heavy emphasis is being placed by other agencies on training and personnel support rather than research support is of particular importance. The effect of this emphasis is greater demand for research support from MRC. Also of concern is the indication that the rapid growth of the other agencies during the seventies is ending and in some cases support is being reduced. This trend will also increase demand for MRC resources as researchers and trainees seek alternate sources of financing.

The Universities: The university milieu is changing rapidly, with major consequences for medical research and, ultimately, health care. Of particular note is:

- reduced recruitment and subsequent increased median age of faculty;

- increased teaching responsibilities which decrease research emphasis; clinical departments are experiencing difficulties balancing research activities with professional obligations to provide health services;

- financial constraints suggest that the research capability will have to be financed to a greater proportion externally; and

- less maneuverability is translating into rigidity in the recruitment and management of human resources.

2. Initiatives

Council has planned a number of new initiatives in 1985-86 and these are detailed below.

Senior Scientist Program: This program will afford the opportunity for institutions to recruit a limited number of independent investigators of outstanding ability in their respective research fields to complement and further develop existing research strength. The Council will provide salary support over a six year period and may approve up to five Senior Scientist Awards per year.

University Industry Liaison: The Council has undertaken a review of the health care industries in order to determine what measures should be taken to favour appropriate university-industry liaison and exchanges. The Council will consider various alternatives and develop an appropriate program to be implemented either in late 1985-86 or during the following fiscal year.

MRC Groups and Program Grants: These two programs provide funding for various collaborative arrangements between researchers to encourage multidisciplinary research or to ensure greater efficiency through the provision of common services. An on-going review of the MRC Groups and Program Grants will be completed in early 1985 leading to the elaboration of a more apropriate program framework and assessment procedures to achieve the objectives of these programs. The new program framework should be announced in 1985-86 and take effect in 1986-87.

Ethics in Research: MRC has, for many years, led public debate on the issues involved in the ethics of research involving human subjects, the use of animals in research, and the use of infectious agents in research. Indeed, Council's guidelines have become the Canadian standards in these areas. A committee is now at work to redraft the guidelines, first published in 1978, on the ethics in research involving human subjects. Council is also planning to interact more broadly with different levels of government in the highly sensitive issue of research involving animals, as well as in research involving biohazards which form a central part of the government's continuing priority in the area

of biotechnology. In all of these areas, Council is encouraging public discussion by holding the meetings of the Standing Committe on Ethics in Experimentation open to the press, and by encouraging correspondence from the public.

3. Update on Previously Reported Initiatives

Following the approval-in-principle of a Five-Year-Plan in June 1983, the MRC's funding level was increased by $50 million over a two-year period 1983-84 and 1984-85. The Council undertook a number of new initiatives during this period, and an update of these is outlined below. New funds were also used to remedy the insufficient funding and inflationary shortfall of previous years, to increase the manpower training programs and to support the purchase of major equipment, a priority identified in the plan.

Research Grants: The number of applications for new operating grants has increased from 916 in 1983-84 to 1206 in 1984-85, a growth of 32%. The grants approved by Council show a similar increase from 275 in 1983-84 to 400 in 1984-85 thereby maintaining the approval rate at approximately 30% with the same high standard of quality in the approved projects. The main reasons for such an increase are stated in other sections, i.e., the University financial constraints, the changing pattern of other health research agencies, the emphasis, nation-wide, on research and development and the passage from one to two competitions per year for new operating grants.

Collaborative and Interdisciplinary Research: Two programs, namely the MRC Groups and the Program Grants are designed to encourage team work in important and promising areas of research and to stimulate the development of centres of excellence. These two programs account for 10.3% of the total MRC budget for grants and scholarships in 1984-85. The Council is supporting ten MRC Groups distributed in seven schools of medicine and one faculty of dentistry and twenty three Program Grants distributed in eleven schools of medicine and one school of dentistry.

MRC Scientist Awards: This program was initiated in 1983-84 to ensure that proven and highly productive investigators are retained within the Canadian health research scene and to provide an attractive career path for outstanding young scientists. Each award provides salary support for a five year period. Eleven awards were made in 1983-84 and Council anticipated expanding this initiative in 1984-85. Because of the long term nature of the financial commitments involved and the uncertainty of future years' funding levels, Council decided to maintain the number of awards at the previous year's level.

Health Professional Scientists: The health professional scientist plays a unique role in providing the interface between basic research and specialized clinical care. A priority of the Five-year plan was the need to encourage a greater number of health professionals to pursue a

career in research. To meet this priority the Council awarded 90 Fellowships to health professionals in 1984-85, an increase of 45% over 1983-84.

Regional and Institutional Disparities: The Development Grants Program is designed to provide special support to schools in which the research capability requires further strengthening. Funds for this program have been increased from $3.1 million in 1982-83 to $4.6 million in 1984-85 an increase of 48%.

Biotechnology: In 1983-84 new training support was initiated to ensure that adequate skills will be available in the future to exploit the promising field of biotechnology. Thus far, four universities, Dalhousie, Sherbrooke, Toronto and Queen's have been approved as biotechnology training centres. Funding of these institutions will allow for the support of up to five trainees for each centre. In 1984-85 nearly $200,000 was expended for this purpose.

Clinical Trials: It remains an MRC priority to compare scientifically the risks and benefits of medical interventions with those of other interventions. Equally the introduction of new approaches to medical care and diagnosis must first be validated scientifically. The clinical trial on cyclosporin and its role in immunosuppression in kidney transplants is yielding an unexpected benefit in describing a new approach to the treatment of autoimmune diseases.

Major Equipment: A Major Equipment competition initiated in 1983-84 resulted in 683 applications amounting to $43.8 million. Assessment of these applications through the peer review system continued in 1984-85 with support provided to projects meeting the criteria established. In addition to this competition, applications for renewals of MRC Groups and applications for renewal and new Development and Program Grants also included requests for support of the purchase of equipment. A total of $13 million was provided for the purchase of equipment in 1983-84 and a further $14 million is estimated for 1984-85. This priority of the Five-Year-Plan was therefore fully addressed during this two-year period.

4. Program Effectiveness

The Medical Research Council monitors the effectiveness of its 24 various funding programs by means of peer review, detailed program evaluations and special program studies.

Peer Review: Council conducts an extensive review and assessment of all grant and award proprosals submitted for funding in order to ensure a high standard of scientific endeavour. For grant applications, this review focuses on the methodological approach to the science, the training and experience of the researchers, the originality and potential contribution to new knowledge as well as the availability of appropriate services and facilities.

All applications are assessed and evaluated by peer review. This peer review process primarily consists of 23 grant and 6 award committees with a total membership of some 250 scientists working chiefly in universities and selected for their knowledge, expertise, and experience. Some 5,000 external referees selected on the basis of their specific expertise are also requested to review grant applications. Their comments are made available to the peer review comittees to contribute to the assessment process. These referees are chosen from the Canadian scientific community as well as from other countries.

In addition, for special programs and in cases where the complexity of the science proposed or the level of funding requested dictates further assessment, Council requests that site visits be conducted by a group of expert scientists in the field concerned. The report of the site visitors is made available to the grant committee and/or the Executive Committee and Council where the final evaluation is conducted.

Program Evaluation: It is planned to systematically evaluate all of the Medical Research Council's programs over the next five to eight years.

The Council has already approved a policy on program evaluation and is in the process of preparing a long-term evaluation schedule. In addition the Council has authorized an assessment study on an evaluation of the programs that are used to support the research training of health professionals. This group of programs, which accounts for approximately $7.8 M of MRC expenditures, was selected as the subject of the first formal MRC program evaluation because there appears to be a chronic shortage in Canada of research-trained doctors, dentists, pharmacists, and veterinarians. Information arising from the evaluation study will guide the Council in improving the effectiveness of its training programs.

Special Studies: Program effectiveness is also assessed in the course of special studies conducted by the Council's Standing Committees.

In 1984-85, the Standing Committee on Research Funding devoted special attention to the Development Grants Program which is designed to assist those schools in which research activity is comparatively weak. This analysis gave some insight into the effects of the current program and led to the development of the Senior Scientist Program. The Standing Committee is now studying the MRC Groups and the Program Grants Programs with a view to improving the Council's promotion of collaborative research.

Section II
Analysis by Activity

A. Grants and Scholarships

Objective

To promote and assist applied and clinical research in the health sciences and to support the training and development of research manpower with the intention of helping to attain the quality and scale of research essential to the maintenance and improvement of health services.

Resource Summary

The Medical Research Council's program expenditures are virtually all contained in the Grants and Scholarships Activity. These expenditures, which constitute some 97.3% of the total, are in four areas: Grants, Manpower Support Programs, Travel and Exchange Programs, and Other Activities. Figure 5 below shows relative spending by area.

Figure 5: Activity Expenditures ($000)

	Estimates* 1985-86	Forecast 1984-85	Actual 1983-84
Grant Programs			
Grants-in-Aid	89,048	104,213	92,674
Other Grant Programs	19,341	23,346	21,754
Manpower Support Programs			
Salary Support	8,709	9,333	8,381
Research Training	9,649	14,872	13,631
Travel and Exchange	79	515	355
Other Activities	260	912	518
Total	127,086	153,191	137,313

* The breakdown of the 1985-86 Estimates by sub-activity is not definite at this time since Council will not approve final allocation until March 1985.

The increase of $15,878 from 1983-84 to 1984-85 reflects the $10 million in new funds following the approval-in-principal of the Five-Year-Plan and an adjustment for inflation of $5.8 million or 5% applied to the base budget of $117,563,000.

The $26,105 reduction in 1985-86 reflects the end of the five year period for which new funds were approved.

Past Financial Performance

There are no significant changes between 1983-84 planned and actual performance. Funds available in any specific program at year end are directed to support the purchase of major equipment. The Total Estimates column includes an amount of $19,750,000 approved in Supplementary Estimates "B" 1983-84.

Figure 6: 1983-84 Financial Performance ($000)

	Main Estimates 1983-84	Total Estimates 1983-84	Actual 1983-84	Change
Grant Programs				
Grants-in-Aid	76,040	92,273	92,674	(401)
Other Grant Programs	18,010	21,710	21,754	(44)
Manpower Support Programs				
Salary Support	8,262	8,447	8,380	67
Research Training	14,364	13,832	13,631	201
Travel and Exchange	406	346	356	(10)
Other Activities	481	705	518	187
Total	117,563	137,313	137,313	0

Description

Grant Programs: Through its Grant Programs the Medical Research Council provides support for basic, applied and clinical research projects in the health sciences as proposed and carried out by investigators on the staff of medical, dental, pharmacy and veterinary medicine schools in Canadian universities and affiliated institutions, and in a few other schools or departments such as psychology and nursing. Support is generally provided under three major categories:

Operating Grants support research projects directed towards a defined objective, conducted by an investigator working alone or in collaboration with others. The grants may be used to employ assistants or trainees, to purchase materials, supplies, and items of equipment costing less than $10,000, to buy and maintain laboratory animals, and to support limited travel costs.

Major Equipment Grants provide for the purchase of items of equipment costing more than $10,000 which are normally used in research projects supported by the Council.

Maintenance Grants are provided for the operating support and maintenance of facilities shared by several investigators within an institution or region.

The Grant Programs presently consist of the following:

- Grants-in-Aid
- Program Grants
- Development Grants
- Subject Research Development Grants
- Biotechnology Development Grants
- MRC Groups
- General Research Grants
- Special Projects

Grants-in-Aid meet the direct costs of research in the health sciences as proposed and carried out by investigators.

Program Grants are used to support a research program involving closely integrated research activities carried out by two or more investigators. The program may be multi-disciplinary or within one discipline, and may originate and be carried out in one or several departments, faculties or universities.

Development Grants are designed to provide special support to schools in which research is considered to be less than satisfactorily developed. In general these grants facilitate the recruitment and establishment in research of highly qualified investigators.

Subject Research Development Grants are provided for stimulation of research in specific areas. For example, they have been used to stimulate the development of heart research and are presently being used to expand research in perinatology.

Biotechnology Development Grants are designed to encourage further research in the application of recombinant DNA methods to problems directly applicable to the health sciences.

The MRC Group program provides support to teams of two or more accomplished investigators for collaborative work over a period of years in what appears to be especially productive areas. The underlying philosophy of MRC Groups is essentially to create centres of excellence.

General Research Grants are funds provided to Deans of Medicine, Dentistry, Pharmacy and Veterinary Schools for discretionary use in support of local research projects.

Special Projects are sometimes initiated to provide support for particular research projects in subjects or fields which may be expected to be specially productive and to foster research on topics of particular concern in Canada.

Refer to Figure 7 page 28 for the resources allocated to the Grant Programs.

Typical research areas covered by the Grant Programs include:

- Cellular biology
- Immunology
- Nutrition & metabolism
- Reproductive biology
- Cancer
- Behavioural Sciences
- Respirology
- Gastroenterology
- Nephrology
- Connective tissue disorders (non-visceral tissues, except skin; arthritis)
- Ophthalmology
- Otolaryngology
- Genetics
- Endocrinology
- Developmental biology (pediatrics)
- Neurosciences
- Cardiology
- Hematology
- Dentistry
- Dermatology
- Microbiology
- Drugs and their effects
- Environmental and occupational medicine (including accidents)

Manpower Support Programs: Through these programs, the Medical Research Council provides direct support for research personnel or research trainees. These programs are grouped under two main categories as follows:

Salary Support Programs: The Medical Research Council provides salary support for independent investigators through three basic programs: The Career Investigators program supports a number of highly qualified researchers who have made research a full-time career. The MRC Scientist program was initiated in 1983-84 and is aimed at providing salary support for five years to outstanding investigators who have recently established their reputation as independent researchers and who wish to devote their full time to health research. The Scholarship program affords those who have recently completed their formal research training an opportunity to demonstrate their ability to carry out independent research.

Research Training Programs: The Medical Research Council offers a number of programs for the support of highly qualified candidates seeking research training in the health sciences: the **Centennial Fellowships** and regular **Fellowships** for those who have an M.D., D.D.S., D.V.M., or Ph.D. degree, and **Studentships** for those undertaking full-time training at the predoctoral level. Assistance is also provided as **Dental Training Grants** to DDS graduates who wish to engage in a program of study leading to a Ph.D. degree and certification in a clinical

specialty. **Biotechnology Training Grants** are available as opportunities for training students and post-doctoral fellows in the application of biotechnology techniques. To encourage an interest in research among undergraduates in Canadian schools of medicine, dentistry and pharmacy, the Council offers **Undergraduate Research Scholarships** which are taken during the summer period or any other elective periods depending on the school's undergraduate curriculum.

Refer to Figure 7 page 28 for the resources allocated to the Manpower Support Programs.

Travel and Exchange Programs: The **Visiting Scientists, Visiting Professorships** and **Travel Grants** programs afford opportunities for collaboration and exchange of information between Canadian scientists and their colleagues in Canada and abroad. MRC also supports the cost of **workshops** and **symposia** designed to address specific questions or problems of importance to research in the health sciences in Canada and to reach a consensus on recommendations or conclusions.

Refer to Figure 7 page 28 for the resources allocated to Travel and Exchange Programs.

Other Activities: This section represents less than 1% of the total grants and scholarships activity and comprises miscellaneous elements which cannot be integrated in the Grant Programs and the Manpower Support Programs. It includes a grant to the Canadian Council on Animal Care which is an autonomous advisory and supervisory body operating under the aegis of the Association of Universities and Colleges of Canada and supported financially by the Natural Sciences and Engineering Research Council and the Medical Research Council.

2581

Performance Information/Resource Justification

Figure 7 shows the distribution of the number of grants and scholarships awarded by MRC by Program and dollar value.

B. Administration

Objective

The objective of the Secretariat of the Council is to provide efficient and effective scientific, technical and administrative services in support of the Council's operation.

Resource Summary

The Administration Activity which includes all operating expenditures of the Council accounts for 2.7% of the MRC budget for 1985-86. It includes all the person-years of the Council.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Salaries and other personnel costs	2,000	54	2,098	54	1,697	50
Contributions to Employee Benefit Plans	275		269		283	
Operating Expenditures	1,222		1,412		1,146	
	3,497	54	3,779	54	3,126	50

Salaries, other personnel costs and contributions to Employee Benefit Plans represent 65.1% of the total activity budget in 1985-86. The reduction in operating expenditures is mainly attributed to a reduced budget for the project on the development of a French terminology of scientific terms.

Past Financial Performance

There is no significant change between the 1983-84 planned and actual financial performance except for a 13% lapse in salary funds.

Figure 9: 1983-84 Financial Performance ($000)

	Main Estimates 1983-84		Total Estimates 1983-84		Actual 1983-84		Change	
	$	P-Y	$	P-Y	$	P-Y	$	P-Y
Administration

Operating Expenditures	1,005		1,255		1,146		109	
	3,209	51	3,488	51	3,126	50	362	1

Description

The Administration Activity includes all personnel costs and services required for the effective functioning and operation of the granting process, and for the administration of Council and its committees.

This activity consists of the following responsibility centres:

Office of the President: Executive management of all aspects of the Council's activities including the establishment of Standing and Advisory Committees to advise Council on specific matters relating to health research.

Programs Branch: Management and administration of the peer review and selection process and responsibility for the administration and delivery of programs approved by Council.

Policy, Planning and Program Development: Responsible for initiating and coordinating the development of new policies and programs, for the elaboration of long term plans, for preparation of evaluation plans and for the review and evaluation of programs.

Public Affairs: Responsible for the development and production of information material in order to provide the scientific community and the general public with full, accurate and timely information about the policies and programs of the Medical Research Council and its

contribution to Health Research. It also attempts to obtain the views and concerns of Canadians on questions relating to ethics, experimentation and biohazards.

Corporate Management: The provision of financial, personnel and administrative services and the development and maintenance of electronic data processing systems required for the administration and control of grants and scholarships and the development of other administrative systems and procedures.

Performance Information/Resource Justification

The increase of fifteen person years over a three year period from 1982-83 to 1984-85 has enabled Council to establish a policy, planning and program development directorate, to improve communications with the scientific community, to better inform the general public on health research activities, to initiate the development of an electronic data processing system for the administration and control of grants and scholarships, to improve management practices in areas of finance and personnel and to add to the support staff as a result of a considerable increase in workload.

As indicated previously, the number of applications in grants-in-aid and in manpower support programs has increased by 73% and 82% respectively since 1980-81. Such a volume increase has a direct impact on functions related to the processing of these applications and to the administration of the peer review system. The number of person years has not increased proportionately and it is expected that computer processing of these applications will enable Council to meet, at least partially, the increasing application pressure with improved productivity. There are, however, certain costs such as postage, travel of the peer review committee members and printing of required documentation for these committees which are directly related to workload increases.

Figure 10: Relationship of Administrative Expenditures to Total Council Expenditures

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Total Council Expenditures	130,583	156,970	140,439
Administration	3,497	3,779	3,126
Percentage of Total	2.7%	2.4%	2.2%

Other	7	5	4		38,471
Administrative Support					
Clerical	15	16	16	12,932-31,743	21,731
Secretarial	8	8	8	12,636-31,946	24,662
Data Processing	3	-	-	13,325-37,130	16,441

Note: The person-year columns display the forecast distribution of the authorised person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Ministry of State Science and Technology Canada

1985–86 Estimates

Part III

Expenditure Plan

2591

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Ministry of State

Science and Technology
Canada

2595

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts, provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $8,432,000 in 1985-86 for the Ministry of State of Science and Technology Program. The remaining expenditures, estimated at $645,000 for pensions and other employee benefits and for the Minister's salary and motor car allowance, will be covered under existing statutory authority.

2599

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

Making science and technology a more effective tool contributing to national economic goals requires action in a number of policy areas. In 1985-86, MOSST will focus on the policy aspects of:

- increasing Canada's level of research and development (page 12);
- promoting the development, diffusion and application of technology in industry (page 12);
- strengthening the management and relevance of government laboratories (page 12);
- supporting research and research-training capabilities in the universities (page 13);
- improving cooperation and coordination between the federal and provincial governments in S&T matters (page 13);
- strengthening the international linkages which will enhance Canada's technological strengths (page 13);
- increasing national efforts in technologies of strategic importance to Canada, with particular attention to:
  - the National Biotechnology Strategy (page 13);
  - the Canadian Space Program (page 15);
- fostering increased understanding by the general public of the impact of science and technology (page 13).

2. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Policy Formulation, Development, Assessment, Coordination and Provision of Advice	9,077	8,000	1,077
Person-years	88	73	15

* The 1984-85 forecast does not differ significantly from the 1984-85 Main Estimates of $8,254,000 (see Extracts from Part II of the Estimates (page 4).

Explanation of Change: The increase of $1.1 million and 15 person-years is primarily due to the following:

	$ (000)
• An increase in contributions to the European Space Agency	229
• Relocation of the ministers office from the Ministry of State for Economic and Regional Development (MSERD) to MOSST	675
• Other items, including salary and wage increases	

B. Recent Performance

1. Highlights

Early in the 1983-84 year, MOSST underwent a major reorganization and reduction in size. Subsequently, the plans presented in the 1983-84 expenditure plan were revised to reflect the responsibilities of the new MOSST. Under its new form of organization, MOSST did not undertake economic analyses into the determinants of R&D expenditures or develop new bilateral cooperation arrangements with other countries. The following portions of the 1983-84 plans were undertaken:

- the government had established a target to be reached by 1985 for Gross Expenditure on Research and Development (GERD) equal to 1.5% of Gross National Product. In the period 1979 to 1982 there was substantial progress towards this goal; however, subsequent progress has slowed (page 14);

- several studies on new technologies were begun (page 14);
- substantial work supporting a social science policy was undertaken (page 15);
- the space program was updated (page 15); and
- to improve public awareness of science and technology issues, MOSST successfully sponsored the Canada Tomorrow Conference and initiated the Public Awareness program (page 15).

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change*
Policy Formulation, Development, Assessment, Coordination and Provision of Advice*	11,169	12,050	881

* After the reorganization, the new MOSST required fewer resources to fulfill its mandate, effecting a reduction in expenditures.

C. Background

1. Introduction

The Ministry of State for Science and Technology is responsible for formulating policies and providing advice on science and technology to the federal government. Its mandate covers the science and technology activities of government departments and those of industry and universities insofar as they interact with the federal government.

The Secretary of MOSST is also the Chief Science Advisor to the government, with responsibility for providing expert and objective advice to Cabinet Committees on priorities for, and the planning of, Canada's overall science and technology effort.

The other agencies which report to the Minister of State for Science and Technology are the National Research Council, the Natural Sciences and Engineering Research Council and the Science Council of Canada.

2. Legal Mandate

The Ministry of State for Science and Technology was established by Order in Council in 1971 with a mandate to develop policies with respect to:

- the establishment of priorities for science and technology;
- the support of science and technology and its application in furthering national objectives;
- the optimum investment in science and technology by governments, industry and universities;
- the coordination of federal science and technology programs with other government policies;
- cooperation with the provinces, other organizations and other nations;
- the organization of science and technology in the public service;
- the allocation of financial and personnel resources; and
- the extent and nature of Canada's participation in international scientific undertakings.

On July 31, 1980, the Prime Minister designated MOSST as the lead department for space research and development policy and the coordination of space activities among federal government departments and agencies.

On July 15, 1983, the Prime Minister assigned the additional new role of Chief Science Advisor to the federal government to the Secretary of the Ministry of State for Science and Technology. In addition to the issues outlined above, the Chief Science Advisor is to advise on: the integration of a long-range scientific perspective into the policy development process and into specific proposals; the identification of areas which are science and technology intensive and which will have a significant impact on Canada; and the quality and effectiveness of science and technology policies.

3. Program Objective

MOSST has, in effect, a single program objective, which is to encourage the development and use of science and technology in support of national goals.

4. Program Description

The Chief Science Advisor and his secretariat, the Ministry of State for Science and Technology, are responsible for providing expert advice to senior government officials, Ministers, Cabinet Committees and, on request, the Prime Minister on all areas of science and technology and their impact on the economic and social development of the nation as well as on foreign affairs and national defense.

In particular, MOSST is responsible for:

- assessing policies and programs in science and technology of the federal government as they relate to the provincial governments and the industrial and university sectors in Canada, as well as those of foreign countries which have an impact on the Canadian economy;

- identifying S&T areas of significant impact on the economy, society, international relations and national defence; and recommending priorities and strategies to achieve the national goals in these areas; and,

- integrating the long-range scientific and technological perspective into the policy development process of government and into specific proposals put forward by departments, agencies and ministries.

The Chief Science Advisor advises on funds allocated to science and technology related initiatives in departmental proposals. The Ministry does not have a program budget nor does it directly control the science and technology budgets of other departments. Its influence on the science and technology related priorities and expenditures in the federal and provincial governments, industry, and universities, is exerted through both formal and informal contacts in those organizations, and ultimately through advice to Cabinet Committees.

5. Program Organization for Delivery

Activity Structure: MOSST's program is encompassed in the activity; "Policy formulation, development, assessment and provision of advice".

Organization Structure: MOSST is located entirely in Ottawa and is organized into an Operations Branch, a Policy and Strategy Branch and a Communications Branch. Figure 3 on page 11 presents the organization and resources for 1985-86. The corporate services functions of finance, personnel, and administration are provided by the Department of Regional Industrial Expansion.

Operations: This branch is responsible for providing the Chief Science Advisor and the Cabinet committee system with advice on current issues involving science and technology considerations and for responding to requests for special studies.

Policy and Strategy: This branch is responsible for providing the Chief Science Advisor and the Cabinet committee system with advice on medium to long-range science and technology issues that are likely to have an impact on the economic and social development of the country. This Branch is also responsible for the development of space research and development policy and coordination of space activities among government departments and agencies.

Communications: This branch is responsible for providing a catalytic and coordinative role in encouraging effective federal communication of science and technology related issues. It also provides public affairs support for the Minister and the Ministry.

Corporate Services: Corporate Services is responsible for developing and maintaining all finance, personnel and, administrative support services for the efficient and effective operation of the Ministry, including development and maintenance of integrated office and information systems and comprehensive documentation on government science and technology policies and programs. Corporate services are provided to MOSST by the Department of Regional Industrial Expansion (DRIE).

D. Planning Perspective

1. Environment

Science and Technology are vital to the economic and social progress of Canada and there is an ever-increasing need for policies having an impact on the total environment of research and technological innovation, whether in industry, universities or federal and provincial governments. MOSST continues to develop broad policies, as well as providing more specific advice on sectoral aspects of science.

Federal science expenditures are not isolated as a separate budget by the federal government but are spread across several budgetary envelopes. A basic understanding of the linkages between the federal government's science and technology policies is essential to MOSST's task of recommending on resource allocation and policies relating to science.

Economic Conditions: Economic restraints in both public and private sectors call for judicious allocation of resources to science and technology endeavours. MOSST's advice on priorities and resource allocation seeks to ensure that science and technology expenditures provide an optimum contribution to economic development.

2605

Technology Development: The development and application of new technologies will be crucial to overcoming the chronic problem of slow productivity growth, which Canada has experienced over the past decade, and to improving Canada's competitive position in world markets. MOSST wil be giving high priority to identifying technological opportunities for Canada and to furthering the country's capacity to take advantage of these opportunities.

2. Initiatives

Increasing the Gross Expenditures on Research and Development (GERD): The federal government is committed to raising the national level of research and development. Canada's current level of GERD to GNP is 1.28%, or less than half that of most other industrialized countries. MOSST will contribute towards this goal by analyzing the factors that are currently inhibiting Canada from increasing its GERD, and recommending policies and programs which will encourage each sector - industry, universities and government - to increase its commitment to research and development.

Promoting the development, diffusion and adoption of new technologies: To become more competitive, Canada must improve industry's access to and utilization of key technologies. MOSST will undertake the development of S&T policies to:

- accelerate the diffusion of domestic and foreign technologies to industries; and
- identify and foster strategic technologies of critical importance to Canadian industrial development.

The first is important as Canada not only produces less than 2% of the world's technology, but has also been demonstrably slow in recognizing and utilizing known technologies that could effectively improve the productivity of our resource base and current industries. The second is equally vital because a national strength in certain strategic technologies, such as microelectronics and biotechnology, are essential to the development and diversification of our economy.

Strengthening the management and relevance of government intramural R&D: The federal government devotes over $1.0 billion to intramural research and development. It is important that the government ensure that this investment is effective in providing the S&T underpinnings essential to Canada's economic competitiveness -- underpinnings only the government can reasonably provide. In particular, MOSST will work towards ensuring that intramural R&D activities are fully appropriate to the government's role and requirements, are relevant to government objectives and of high priority and quality, are regionally well-distributed, are well-managed --especially where they cut across departments and envelopes -- and are well-linked to industry when they are industry-oriented in nature.

Supporting research and research training capabilities in the universities: Canada cannot improve its ability to compete through a more effective use of science and technology if it does not possess a firm foundation of basic research and highly qualified human resources. MOSST will formulate policy advice to ensure that universities are receiving adequate and stable research funding through the granting councils (the Natural Sciences and Engineering Research Council, the Medical Research Council and the Social Sciences and Humanities Research Council). This will include ensuring that there is a reasonable and clearly defined coverage of university research overhead costs through federal funding of education.

Improving cooperation and coordination between the federal and provincial governments in S&T matters: Improved federal-provincial coordination on science and technology policies, programs and activities in science and technology would improve the effectiveness of resource expenditures in this area and minimize the duplication of effort. To achieve this, MOSST will initiate federal consultations with the provinces and work towards establishing effective coordinating mechanisms.

Strengthening international linkages: To be able to develop and market its high technology products effectively, Canada requires better access to international technology and world markets. MOSST will develop policy advice which works towards the reduction of the various direct and indirect barriers to international high technology trade -- especially non-tariff barriers such as concessional financing, government procurement practices and discriminatory standards -- in a way that does not impede the development of Canada's high technology industries.

Biotechnology: In order to effectively implement the National Biotechnology Strategy, MOSST will be continuing to undertake studies and provide advice on: proprietary rights; safety and biohazard regulations relating to biotechnology; and, the continuing and proposed programs on biotechnology in Canada. MOSST also chairs the Interdepartmental Committee on Biotechnology which decides on annual allocations for departmental activities. MOSST also provides the secretariat to the National Biotechnology Advisory Committee.

Public Awareness: The ministry will assess the operations of the Public Awareness Program for Science and Technology and make recommendations for improvements to the program.

Assessment of science and technology related issues: A significant component of MOSST's shorter-term activities will be the assessment of science and technology policies and programs being brought forward to Ministers. This will entail the systematic analysis of departments' policy and program proposals and the provision of advice to the Chief Science Advisor and to Ministers concerning these proposals. This function will be primarily the responsibility of MOSST's Operations Branch.

Longer-term policy activities: The provision of policy advice on longer-term science and technology initiatives will constitute a major proportion of the Ministry's workload. This work, which is the responsibility of the Policy and Strategy Branch, will integrate the knowledge and efforts of specialists in internal government policies and programs, and senior experts on industrial, university, federal-provincial and international matters related to science and technology.

2307

Areas of particular emphasis will include the desired level of Canadian R&D investment, the adoption and adaptation of new technologies by Canadian industry, the encouragement of increased industrial R&D investments, and the adequacy of support for university R&D. The provision of advice concerning improved coordination and enhanced relevance of government R&D will also be a focus of Ministry activities, and particular attention will be devoted to research, development and innovation in Canada's resource-based industries and in small business.

3. Update on Previously Reported Initiatives

Early in the 1983-84 year, MOSST underwent a major reorganization and reduction in size. Consequently the plans presented in the 1983-84 expenditure plan were revised to reflect the responsibilities of the new MOSST. This section will report against the initiatives of the revised 1983-84 plans.

Gross National Expenditure on Research and Development (GERD): Initial progress towards the target was encouraging, with R&D expenditures rising at a rapid rate. Recent evidence shows that this progress has slowed down considerably, primarily due to the recession, and suggests that the 1985 target may not be met. MOSST has, during this period, offered advice to the government on particular policies respecting effective resource allocation for government intramural R&D programs, industrial R&D and technology support programs, and the funding of university research by federal granting councils.

New Technologies: Work is proceeding in a number of areas, some of which are under the direct control of MOSST:

- the government announced the establishment of a National Manufacturing Technology Information Centre which will accelerate the diffusion of technology; this Centre will be run by the private sector; other aspects of factory automation are under review by MOSST;
- advanced materials are currently the subject of interdepartmental study led by MOSST;
- artificial intelligence and fifth generation computer technology is the subject of policy consideration coordinated by MOSST;
- semiconductor technology has been identified as an area in need of urgent interdepartmental review to be led by DRIE;
- MOSST is assisting the Science Council of Canada launch a new program to identify emerging science and technologies of importance to Canada; and
- MOSST, with funding supplied by the Department of Energy, Mines and Resources, has begun studies of the economics of alternative liquid fuels for transportation.

Social Sciences: MOSST has been establishing measures to provide more stable funding for the federal granting councils, including the Social Sciences and Humanities Research Council, which funds much of the social sciences research in Canadian universities. As well, the Canada Tomorrow Conference, sponsored by the Minister of MOSST, examined many issues related to the social impact of new technologies.

Space Plan: The space program plan was updated in March 1984, and an additional $122.2M was allocated to space activities over the period 1984-85 to 1986-87. The Space Industry Information Bank has been established and industry is applying data on a regular basis. A new space program plan, involving a number of major initiatives, is being developed for implementation in 1985-86 to 1989-90.

Task Force on Federal Policies and Programs for Technology Development: The report of the Task Force was submitted to the Minister of State for Science and Technology in July 1984. The report has received strong support from both the public and private sectors. MOSST is currently developing a response including an implementation plan for subsequent presentation to Cabinet.

Public Awareness: To improve communications and understanding between all groups in Canadian society which effect or are affected by technological change, the Ministry of State for Science and Technology sponsored the Canada Tomorrow Conference, November 6-9, 1983. Approximately 750 individuals from industry, universities, labour, governments and the general public were invited to discuss the management of technological change in both plenary and workshop sessions. The conference was telecast live over the House of Commons system and a one hour video-tape summary was produced for post-conference viewing. Results of the Conference were also made available through three publications: the Summary; the Proceedings; and Commissioned Papers.

To foster increased understanding of science and technology in the general public, MOSST initiated a Public Awareness Program for Science and Technology. The $1.5 million program, which supports proposals from the public on a competitive basis, is administered by the Department of Supply and Services.

4. Program Effectiveness

The effectiveness of MOSST's program must be viewed in the context of the objective to formulate, develop, assess, and coordinate policies and advise the government on matters affecting the development and application of science and technology and their contribution to national economic and social goals. MOSST's program effectiveness will thus be measured by the quality and acceptability of its advice relative to the program objective. Measures of the degree to which the objective is attained are at best subjective.

5. Resource Justification

The justification of resources is best achieved for this program by presenting some of the operational tasks performed by the organization. Figure 4 presents this information.

Figure 4: Selected Operational Tasks of the Organizational Components

Component	Task
1. Operations	- Assessing departmental science and technology proposals for the Cabinet Committees on Economic and Regional Development, Social Development and Government Operations and for Treasury Board.
	- Providing expert and objective advice on science and technology related issues.
	- Co-ordinating the National Biotechnology Strategy and providing the Secretariat for the National Advisory Committee on Biotechnology.
	- Responding to the recommendations at the private sector Task Force reviewing Federal Policies and Programs for Technology Development.
2. Policy	- Developing strategies and related policies for the medium and long-term application of scientific and technological developments.
	- Identifying issues related to the support and effective utilization of science and technology.
	- Proposing strategic directions for the national science and technology effort.
	- Assigning relative priorities to the various fields of science and technology development.
	- Resolving conflicts between the various objectives of federal science and technology policies and programs.
	- Liaising with industry, university and international interests to provide non-government sector input into federal science and technology policy-making.
	- Coordinating federal/provincial efforts in science and technology matters.
	- Developing policies and strategies for the Canadian Space Program.

	Component		Task
3.	Communications	-	Planning communications strategies for special projects.
		-	Providing public relations and communications regarding government science and technology strategy.
		-	Coordinating the Public Awareness Program for Science and Technology.
4.	Corporate Services	-	Providing Finance, Administration, and Personnel, services. (These services are provided by the Department of Regional Industrial Expansion).

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

MOSST's expenditures by object are presented in Figure 5.

Figure 5: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	4,344	3,716	5,345
Other personnel	605	516	985
Goods and Services			
Transportation and communications	450	350	584
Information	158	168	463
Professional and special services	1,215	1,183	983
Rentals	35	45	173
Purchased repair and upkeep	37	40	49
Utilities, materials and supplies	82	60	99
	6,926	6,078	8,681
Capital			
Construction and acquisition of machinery and equipment	27	27	58
Transfer payments	2,124	1,895	2,430
Total expenditures	9,077	8,000	11,169

2. Personnel Expenditures

Figure 6: Authorized Person-Years and Salary Provision*

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Executive	31	30	23	50,350 - 96,300	64,500
Scientific and Professional	4	11	13	42,109 - 61,522	56,434
Administrative and Foreign Service	20	20	73	24,824 - 60,465	46,430
Administrative Support	21	15	54	20,281 - 26,563	23,525

* Excluding one Governor-in-Council appointee and the Minister's exempt staff.

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 7: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Grant to the Canadian Science Writers Association	--	--	1
Contributions			
Contribution toward the support of the International Institute for Applied Systems Analysis	--	--	382
Contribution to cover the cost of participation by Canada in the program of the European Space Agency	2,124	1,895	2,047
	2,124	1,895	2,430

B. Cost Analysis

Net Program Cost

MOSST's 1985-86 Estimates includes only authorities to be voted and statutory authorities. Other items must be considered when describing the Ministry on a full cost basis. Also to be taken into consideration are services provided without charge by other departments such as, accommodation charges for Public Works and services provided by Supply and Services, Treasury Board and the Department of Labour. Figure 8 outlines the total cost of MOSST's program for 1985-86 and the previous year.

Figure 8: Program Costs ($000)

	1985-86 Expenditures	Other Costs	Total Cost	Total Cost 1984-85
Science and Technology Program	9,077	293	9,370	8,774

C. Change in Activity Structure

In July 1983, MOSST underwent a complete reorganization. Essentially, a new Ministry with a different reporting structure was created, and the old Ministry was terminated. Thus, during the 1983-84 fiscal year, two separate accounting records were kept, one for the old MOSST, and one for the new MOSST, in order to distinguish the costs of these two distinct organizations. For reporting and comparability purposes, these two sets of accounting records can only be consolidated meaningfully at the "object of expenditure level", since not only the reporting structure had changed, but also the activity structure as well, from two activities to one. Because two different reporting structures were used in the same fiscal year, it is not possible to provide an accounting crosswalk between the 1983-84 Actual expenditures and the 1983-84 Main Estimates.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

National Defence

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

The Plan is divided into three sections providing increasing levels of detail about the operations of the Defence Services Program. Section I presents an overview of the program and a summary of its current plans and performance. Due to the classified nature of performance indicators used within the Department of National Defence to measure program effectiveness, the disclosure requirements for Performance Information/Resource Justification in Section II of the Program Expenditure Plan cannot be met. However, more general information regarding planned activities, capital projects, etc, has been provided. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section 1 provides cross references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of special interest.

Users of this document should note the following:

a. The expenditures of the Department are incurred and controlled through a centralized structure of management accounts. The expenditures in these management accounts are allocated to the eight Activities of the Department through the mechanism of a costed program base as indicated at page 65 of Section III of the Plan. This allocation process provides the financial data displayed for the eight Activities in Section II of the Plan; and

b. The allocation of spending authority, and responsibility for expenditures, which reflect the Department's management structure, is contained in Section III.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $8,622,320,742 in support of the 1985-86 Defence Services Program. The remaining expenditures, estimated at $745,402,209 for pensions and other employee benefits of members of the Canadian Forces and civilian employees of the department, the Minister's salary and motor car allowance and payments to dependents of certain members will be made under existing statutory authority.

Financial Requirements by Authority

Vote No.	(thousands of dollars)	1985-1986 Main Estimates	1984-1985 Main Estimates
	Defence Services Program		
1	Operating expenditures	5,946,536	5,612,950
5	Capital expenditures	2,535,013	2,316,083
10	Grants and Contributions	140,772	142,168
(S)	Minister of National Defence - Salary and Motor Car Allowance	42	41
(S)	Pensions and Annuities paid to Civilians	21	19
(S)	Military Pensions	608,782	559,455
(S)	Contributions to Employee Benefit Plans	136,557	122,027
	Total Program	9,367,723	8,752,743

Votes - Wording and Amounts

Vote No.	Department of National Defence	1985-1986 Main Estimates
1	Defence Services - Operating expenditures and authority for total commitments, subject to allotment by the Treasury Board, of $34,995,986,742 for the purposes of Votes 1, 5 and 10 of the Department regardless of the year in which such commitments will come in course of payment (of which it is estimated that $26,092,713,000 will come due for payment in future years), authority to make payments from any of the said Votes to provinces or municipalities as contributions toward construction done by those bodies, authority, subject to the direction of the Treasury Board, to make recoverable expenditures or advances from any of the said Votes in respect of materiels supplied to or services performed on behalf of individuals, corporations, outside agencies, other government departments and agencies and other governments and authority to spend revenue, as authorized by Treasury Board, received during the year for the purposes of any of the said Votes.....	5,946,536,000
5	Defence Services - Capital expenditures.....	2,535,013,000
10	Defence Services - The grants listed in the Estimates, contributions for Emergency Preparedness purposes and contributions to the North Atlantic Treaty Organization military budgets, common infrastructure program and airborne early warning and control systems and, in accordance with Section 3 of the Defence Appropriation Act, 1950, the transfer of defence equipment and supplies and the provision of services and facilities for defence purposes.....	140,771,742

Program by Activities

(thousands of dollars)	1985-86 Main Estimates							1984-85 Main Estimates
	Authorized Person-Years Civilian	Budgetary Operating	Capital	Transfer Payments	Sub-Total	Less: Revenues credited to the vote	Total

Section I
Program Overview

A. Highlights

During 1985-86, the Defence Services Program expects to achieve the following:

- continue to meet the NATO goal of 3% real growth in defence spending;
- achieve and maintain a capital allocation of approximately 27% of the defence budget providing for acquisition of such major equipments as the CF18 Fighter Aircraft and the Canadian Patrol Frigates. Details of Capital projects are contained on pages 54 to 57 in Section III;
- increase military personnel strength by 693 person-years while decreasing the civilian personnel strength by 1121 person-years (see page 52);
- maintain current levels of operations and maintenance; and
- improve level of preparedness by providing an additional $43 million for the increased readiness of combat forces and the sustainability of these forces under combat conditions;

B. Financial Summary by Activity

Funding requirements for the Defence Services Program for both the Estimates year and the current fiscal year are presented by activity in Figure 1.

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Maritime Forces	1,803,179	1,529,573	273,606	18
Land Forces in Canada	1,458,875	1,382,171	76,704	22
Air Forces in Canada	2,781,946	2,784,356	(2,410)	27
Canadian Forces in Europe	898,163	863,372	34,791	32
Communications Services	353,247	297,385	55,862	35
Personnel Support	1,244,179	1,145,807	98,372	38
Materiel Support	605,696	543,131	62,565	41
Policy Direction and Management Services	503,391	443,071	60,320	45
Total	9,648,676	8,988,866	659,810	
Less Revenue Credited to the Vote	280,953	270,468	10,485	
Net Requirement	9,367,723	8,718,398	649,325	
Authorized person-years	118,327	118,756	(429)	

Explanation of Change: The increase of $649.3 million in 1985-86 requirements over the 1984-85 forecast is made up of the following major items:

	$ millions
• general cost increase;	567.2
• addition of 693 military offset by a reduction of 1122 civilian person-years. The additional military person-years are explained on page 14; the reduction of the civilian person-years resulted primarily from the termination of the Youth Employment Program and from the decision to de-control certain term person-years (see page 52);	17.3
• additional funds for readiness and sustainability; and	43.0
• net increase in capital project funding.	21.8

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $34.3 million or .4% lower than the 1984-85 Main Estimates of $8,752.7 million (Extracts from Part II of the Estimates, page 4). The difference of $34.3 million reflects the following major items:

	$ millions
• a reduction in total budget for purposes of funding the Federal Employment Program initiative;	(50.0)
• funds to be lapsed to offset the overutilization of expenditures in FY 1983-84;	(18.1)
• an increase in the Federal Youth Training Employment Program;	18.5
• an increase in the Federal Summer Youth Employment Program; and	13.0
• other technical adjustments.	2.3

C. Background

1. Introduction

The Defence Services Program brings together the activities and the resources which enable the Department of National Defence and the Canadian Forces to carry out their defence roles. The 82,740 military and 35,587 civilian personnel of the Defence Services Program provide the operational and related support capabilities of the Canadian Forces needed to meet Canada's military commitments to the North Atlantic alliance, to provide for the defence of Canada, and to contribute to international stability. In addition to its military roles, the Department of National Defence provides, in co-operation with Transport Canada, maritime and land search and rescue services and assistance to other federal government departments such as Fisheries and Oceans through the provision of military vessels and medium-range patrol aircraft for fisheries patrols. The Department also provides assistance to provincial governments in event of emergency or disaster such as floods, forest fires or medical emergencies. A Crown Corporation, Defence Construction Canada Limited, serves as the contracting and construction supervisory agency for the Department's major construction and maintenance projects. Commencing in 1984-85, Defence Construction Limited was separated from the Defence Services Program. This separation resulted in the removal of 275 person-years and $14.5 million from the Defence Services Program.

2. Legal Mandate

The legal mandate of the Department of National Defence flows from the National Defence Act R.S., C. 184, S. 1. Under that Act, the Minister is responsible for the management and control of the Canadian Armed Forces and for all matters relating to national defence.

3. Program Objective

The objective of the Defence Services Program is to ensure the security of Canada and contribute to the maintenance of world peace. Within this objective, there are a number of specific sub-objectives.

Sub-Objectives:

- to supplement and support the civilian authorities in maintaining surveillance and preserving control over and security within the national territory of Canada and areas of Canadian jurisdiction, to assist civilian authorities in the event of emergency or disaster, to provide search and rescue services and to contribute to national development;

- to enhance the security of Canada against military threat by co-operating with United States of America in the defence of North America;

- to enhance the security of Canada by co-operating in other collective defence measures under the North Atlantic Treaty;

- to promote international stability, both by contributing to peacekeeping activities in co-operation with other members of the international community and by providing military training assistance to friendly nations;

- to provide effective control, management and administration of all activities of the Department and the Canadian Armed Forces;

- to provide the services necessary to ensure adequate supply and technical support of the Department and the Canadian Armed Forces;

- to provide for all levels of training of the Canadian Armed Forces; and

- to maintain and advance Canadian scientific and technological knowledge and analytical capability for defence.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 2, the Defence Services Program is divided into eight Activities. Four Activities, namely, Maritime Forces, Canadian Forces in Europe, Land and Air Forces in Canada comprise the direct combat capabilities of National Defence. The other four Activities provide command and control as well as essential communications and logistics/personnel support functions. For a detailed explanation of the relationship between the Department's management structure and its Program Activity Structure, see Section III, page 65.

Figure 2: Activity Structure

Organization Structure: During the late 1960's, the Army, Navy and Air Force were merged into one unified force under the Chief of the Defence Staff. In the early 1970's, the civilian element of the Department headed by a Deputy Minister and the military headquarters under the Chief of the Defence Staff were integrated into a single entity as National Defence Headquarters, co-headed by the Deputy Minister and the Chief of the Defence Staff.

The National Defence Act charges the Minister of National Defence with the over-all control and management of the Canadian Forces and all matters relating to National Defence. The Minister is assisted by two senior advisers, the Deputy Minister and the Chief of the Defence Staff.

The Deputy Minister draws his authority principally from the Interpretation Act, the Financial Administration Act, and the Public Service Employment Act. Of these, the Interpretation Act is the most significant, in that it designates the Deputy Minister as the Minister's alter ego with respect to the latter's over-all departmental responsibilities. The other two Acts assign to the Deputy Minister specific responsibilities for financial administration in the Department as a whole and for the personnel administration of the civilian employees of the Department.

The Deputy Minister is the senior civilian adviser to the Minister on all departmental affairs of concern or interest to the Government and to the agencies of Government, principally the Privy Council Office, Treasury Board, and the Public Service Commission. He is responsible for ensuring that all policy direction emanating from the Government is reflected in the administration of the Department and in military plans and operations.

The Chief of the Defence Staff draws his authority from the National Defence Act which charges him with control and administration of the Canadian Forces. It specifically requires that all orders and instructions to the Forces be issued by or through him, and by inference, assigns to him responsibility for financial and personnel matters relating to the members of the Forces.

The Chief of the Defence Staff is the senior military adviser to the Minister and is responsible for the effective conduct of military operations and the readiness of the Canadian Forces to meet commitments assigned to the Department of National Defence by the Government.

At National Defence Headquarters (see Figure 3), the Deputy Minister and the Chief of the Defence Staff are supported by the Vice Chief of the Defence Staff and the Deputy Chief of the Defence Staff plus four Assistant Deputy Ministers (Group Principals) responsible for Policy, Materiel, Finance, and Personnel.

Figure 3: Organization of National Defence Headquarters (NDHQ)

Outside National Defence Headquarters, the Canadian Forces are grouped into five Commands (Maritime Command; Mobile Command; Air Command; Canadian Forces Europe, and Canadian Forces Communications Command) and the Canadian Forces Training System. Commanders of Commands are responsible to the Chief of the Defence Staff for the efficient and effective operation of their Command; the Commander Canadian Forces Training System has a similar responsibility to the Assistant Deputy Minister (Personnel). The Canadian Forces in Canada are also organized into six geographical commands to provide liaison with and assistance to provincial and territorial authorities. Three of the functional Commands and Canadian Forces Training System are assigned a geographical/regional reponsibility in addition to their functional responsibility. In addition, Maritime Forces Pacific, a formation of Maritime Command, has a geographical/regional responsibility for Pacific Region.

Figure 4: Canadian Forces Command Structure

2631

All authority for decisions on the allocation of resources in DND is vested in and is delegated by the Minister. The departmental structure through which decisions on resource allocation are made is based upon a hierarchy of four committees which exercise their authority either through consensus or as advisors to their respective chairpersons. Managerial accountability for the results under each Activity is not vested in any single Commander or Group Principal. Accountability is shared by National Defence Headquarters senior management and Commanders of commands and is exercised through the committee structure. Figure 5 displays the relationship of organization to activities in resource terms.

Figure 5: 1985-86 Resources by Organization/Activity ($000) (Net of Revenue)

Activity	Vice Chief	ADM (Personnel)	ADM (Materiel)	ADM (Finance)	Total
Maritime Forces	256,905	551,121	995,153	(17,491)	1,785,688
Land Forces in Canada	318,610	702,985	437,280	(54,223)	1,404,652

D. Planning Perspective

1. Environment

The principal threat to security at home remains that of a nuclear attack on North America. As long as there remains no real defence against such an attack, Canada must seek security in preventing such an attack from occurring. Until this can be assured by means of mutual arms control and disarmament arrangements, there is no choice but to follow the route of deterrence. For that deterrence Canada participates in a significant way in the maintenance of the conventional military capabilities of the North Atlantic Alliance in Europe, where the threat of aggression has been successfully contained for a generation, and in the sea approaches and air space over the North American continent.

Canada must, however, in the final analysis rely for deterrence mainly upon the retaliatory capabilities of the strategic forces of the United States of America. For this reason, a substantial portion of Canada's defence effort has gone into assisting the United States of America in maintaining an adequate and credible retaliatory capability - the essence of deterrence. This is done by contributing to early warning of attack and by helping to reduce the vulnerability to attack of the least protected elements of the United States of America strategic retaliatory forces. A logical outgrowth of Canada's security situation is the part it plays in containing military confrontation in those parts of the world and in those sets of circumstances where hostilities may carry a risk of escalation to the point of precipitating a nuclear attack on North America.

The international strategic outlook requires increases in the collective military capabilities of the North Atlantic Alliance. The emphasis of the government has not been to add to the number of commitments, but rather to increase the capacity to fulfil existing ones. The current fiscal plan provides increased real resources to security and defence. Accordingly, the Department of National Defence is looking at the proper and most productive relationship amongst four requirements: first, to fill out in manpower and material the present force posture; second, by means of timely programs of equipment replacement and modernization, to assure the continuing effectiveness of existing military capabilities; third, through such measures as prepositioning in North Norway the heavy equipment of land forces earmarked for reinforcement of that area, to enhance the deterrent value of Canada's commitment; and fourth, to enhance further the deterrent effectiveness of the Forces by making prudent provision to increase their readiness for combat and their capacity to sustain combat operations in the event of hostilities.

2. Initiatives

Based upon the areas of concentration identified in the Environment section the Department intends undertaking the following initiatives in 1985-86:

Personnel: In 1977, when it became evident that the Canadian Forces' mission could not be accomplished with a person-year authorization of 78,033 military person-years, the government approved a gradual increase of 4,707 person-years (at 400 person-years per year) to a total of 82,740 person-years. The increased spending on Capital has generated a steadily increasing demand for personnel associated with the planning and management of capital projects. While incremental person-years were provided for some of the major projects, these were insufficient to meet the overall departmental needs. The balance of the personnel resources required had to be accommodated at the expense of other activities within the Department. The point now has been reached where demands of the capital program can no longer be met without additional personnel resources. Consequently, the Department will increase military person-years by 693 in 1985-86 against the 4,707 authorized by Cabinet rather than the usual 400 person-years. The 400 person-year increase plus incremental increases since 1977 for project management, language training, etc., have raised the 1985-86 ceiling to 82,740 military person-years. Over the time-frame, authorized civilian person-years have shown a slow but steady downward trend, from 37,872 in 1975-76, to 35,587 in 1985-86. Figure 6 displays the changes in authorized military and civilian person-years over the period 1965 to 1985.

Figure 6: Person-Years 1965-1985

Capital: In 1974, it was decided to substantially re-equip the Forces and to this end provision has been made for significant real growth in equipment spending. As shown in Figure 7, the share of the budget devoted to Capital has risen from 12.2% in 1975-76 to an estimated 27.1% for 1985-86. Details on major capital projects planned are included in Section III, pages 54 to 57.

Figure 7: Capital Program (as a % of total Program)

Readiness and Sustainability: To redress specific Readiness and Sustainability shortfalls an amount equal to .25% of the defence budget was identified, beginning in 1984-85, for increasing Canadian Forces' capability to meet and fully sustain commitments in emergencies. (See additional detail page 78)

3. Program Effectiveness

The development and implementation of performance measurement in the Department has been undertaken as a two-stage process. This process is intended to be evolutionary with the initial stress being placed on effectiveness measures to be followed by complementary measures of efficiency. These measures of effectiveness are applicable at the activity level and for the five Commands are expressed in terms of Preparedness and Combat Effectiveness. The remaining activities have developed measures in terms of Preparedness and National Emergency Effectiveness. Due to the classified nature of these indicators, the disclosure requirements for Performance Information/Resource Justification in the Program Expenditure Plan cannot be met. However, more general information regarding planned activities, capital projects, etc., has been provided. At the program level, information is provided on the measurement effort in terms of Canada's defence in relation to other NATO countries and other government functions.

NATO: Within NATO, an approximate measure of the relative level of Canada's defence activity as compared to that of her NATO allies is shown in Figures 8, 9 and 10.

Section II
Analysis by Activity

A. Maritime Forces (Maritime Command)

Objective

To provide an operationally ready maritime force to meet Canada's defence roles/missions as follows:

- surveillance and control of Canadian territorial waters, adjacent ocean areas and the Arctic Archipelago;
- defence of North America, in cooperation with United States forces;
- contribution to NATO collective defence measures; and
- assistance to civil authorities in the event of emergency or disasters.

Resource Summary

The Maritime Forces Activity will account for approximately 19.1% of total Defence Services Program expenditures and 15.1% of total person-years.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures						
Personnel	596,022	17,871	569,899	17,905	549,062	18,067
Operations and Maintenance	455,604		415,253		363,197	
Operating Requirement	1,051,626		985,152		912,259	
Capital	751,553		544,421		346,822	
Total Requirement	1,803,179		1,529,573		1,259,081	
Less Revenue Credited to the Vote	17,491		17,712		16,312	
Net Requirement	1,785,688	17,871	1,511,861	17,905	1,242,769	18,067

The increase of $273.8 million in 1985-86 requirements over the 1984-85 forecast results from the following:

	$ millions
• general cost increase;	108.1
• increase of 134 military offset by a reduction of 168 civilian person-years; and	3.8
• net increase in capital funding primarily related to the Canadian Patrol Frigate Program.	161.9

Description

Maritime Command Forces and Air Command aircraft under the operational control of Maritime Command, operate from a total of seven bases, five stations and one detachment, located primarily on the coasts.

Bases and units comprise dockyards, training schools, supply installations, airfields, communications facilities and Reserve units. The operational naval force consists of twenty destroyers divided into four squadrons, three support ships, one diving support ship and three submarines. The operational maritime air force consists of eighteen Aurora aircraft in three long range patrol squadrons and one training squadron, thirty-five Sea King helicopters organized into two operational and one training squadron, and one Tracker medium range reconnaissance squadron. There are six ex-minesweepers dedicated to the training of junior officers. An auxiliary fleet made up of oceanographic research vessels, ocean going tugs, coastal oilers and target towing vessels provide support to the fleet. Two utility squadrons and two transport squadrons provide support to the air squadrons and the fleet.

In addition, there are six vessels, including the gate vessels and the Fort Steele located at Reserve Training Units on the East and West coasts, plus eighteen minor vessels located at Naval Reserve Units across Canada. There is one reserve Tracker squadron located on the East coast. Finally, there are three unmanned destroyers held in reserve status.

The Commander Maritime Command, with headquarters in Halifax, commands all surface and sub-surface forces and has operational control of maritime aircraft of Air Command on the Atlantic and Pacific coasts. The Commander of Maritime Forces, Pacific, with headquarters in Esquimalt, British Columbia, has operational control of assigned maritime forces on the Pacific coast.

Overview of Operations

The 1985-86 fleet activities of Maritime Command are structured to meet the operational and maintenance requirements and provide a Maritime Force operationally ready to meet its commitments. In addition, improvements in capability will be realized through new capital acquisitions.

Training and Exercises: Surveillance and sovereignty patrols in areas of Canadian Maritime interest will be conducted by East and West Coast units throughout the year. Canada's commitment to maintain a Destroyer in the NATO Standing Naval Force Atlantic will be met with HMC Ships participating at various times throughout the period. Support to other federal departments will include provision of 65 ship days on the East Coast and 30 ship days on the West Coast for the Department of Fisheries and Oceans. Maintenance of Canada's image abroad will be contributed through foreign port visits scheduled in consultation with the Department of External Affairs. In support of recruiting, cadet organizations and community programs, ship visits will be conducted to Canadian ports on the East and West Coasts in accordance with a Five Year Port Visit Plan. As 1985 is the 75th anniversary year of the formation of the Canadian Navy, an increase in visits to Canadian ports is planned in order to share the celebration of this event with as many Canadians as possible. In addition, Atlantic and Pacific Naval Assemblies are scheduled to allow Naval vessels from other nations to recognize the Canadian anniversary.

To maintain an adequate level of operational readiness, unit formation and fleet level training will be conducted throughout the year. Major activities will include:

Unit Level Training: Throughout the year individual ships will conduct exercises to maintain their readiness capability. Additionally, three destroyers on the East Coast and two destroyers on the West Coast will undergo trials on completion of scheduled refits.

Formation Level Training: Training of ships to operate as a cohesive unit will be accomplished through a series of exercises termed SQUADEX and where possible during transits and through participation in major exercises.

Fleet Level Training: On the East Coast, all available units will participate in a major North Atlantic Treaty Organization exercise, OCEAN SAFARI 85 and a national exercise termed MARCOT 1/85. On the West Coast the Second Squadron will participate in the bilateral exercise READIEX with forces of the United States Navy and a national exercise of the MARCOT variety. The Fourth Squadron will conduct a deployment to continental United States of America, Mexico and Hawaii.

Training support will also be provided to Maritime Air Group and Canadian Forces Fleet School as follows:

Maritime Air Group: Both fixed wing and rotary wing aircraft will be provided with submarines assets on a quarterly basis for anti-submarine warfare training. (See also page 30)

Canadian Forces Fleet Schools: East Coast units will provide support to specialist courses for Combat Control Officers, Above-Water Weapons Directors, Navigation Officers and Anti-Submarine Warfare Air Controllers as required. West Coast units will provide Fleet School support for the Navigation Officers Course. Additionally, the Fourth Squadron will maintain its traditional level of training activity for the production of trained junior officers.

Capital Projects: The navy and associated maritime airforces are structured mainly to defend, along with the United States of America and other NATO allies, the ocean approaches to North America and the reinforcement and resupply routes across the Atlantic Ocean to Europe. They also have responsibility in ocean areas assigned to Canada to detect submarines threatening North America with ballistic or cruise missiles. Major improvements in maritime forces capability to meet these primary responsibilities are being achieved by a number of new or continuing capital acquisitions. Projects with planned expenditures in 1985-86 include:

	1985-86 $ millions
• Canadian Patrol Frigate project (see pages 55, 62);	468.4
• Destroyer Life Extension program (see pages 55, 63);	17.0
• Towed Array Sonar System (see pages 55, 63);	4.7
• Automated Data Link Plotting System (see page 56);	1.7
• Maritime Command and Control System (see page 56); and	1.2
• Submarine Operational Update (see page 55).	1.7

B. Land Forces in Canada (Mobile Command)

Objective

To provide combat-ready land forces to meet Canada's defence roles/missions as follows:

- surveillance and control over, and security within the national Territory of Canada;
- defence of North America, in cooperation with United States of America forces;
- contribution to NATO collective defence measures;
- provision of resources for United Nations Peacekeeping operations; and
- assistance to civil authorities in the event of emergency or disaster.

Resource Summary

The Land Forces Activity will account for approximately 15.0% of total Defence Services Program expenditures and 20.2% of total person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Personnel	783,661	23,926	758,089	23,996	724,260	23,563
Operations and Maintenance	356,793		341,291		319,164	
Operating Requirement	1,140,454		1,099,380		1,043,424	
Capital	318,421		282,791		242,928	
Total Requirement	1,458,875		1,382,171		1,286,352	
Less Revenue Credited to the Vote	54,223		53,062		60,129	
Net Requirement	1,404,652	23,926	1,329,109	23,996	1,226,223	23,563

The increase of $75.5 million in 1985-86 requirements over the 1984-85 forecast results from the following:

	$ millions
• general cost increase;	85.1
• increase of 267 military offset by a reduction of 337 civilian person-years; and	5.8
• net decrease in capital funding primarily related to reduced spending on the Medium Logistics Vehicle project.	(15.4)

Description

Mobile Command has Brigade Groups with headquarters at Valcartier, Quebec, and Calgary, Alberta, and a Special Service Force with headquarters at Petawawa, Ontario. Each of these formations has a balance of artillery, armour, infantry, engineers, signals and service support units.

In addition to these bases, Mobile Command is responsible for the Canadian Forces bases at: Suffield, Alberta; Shilo, Manitoba; London, Ontario; Montreal, Quebec; and Gagetown, New Brunswick. The Combat Training Centre in Gagetown continues to provide the major individual training facilities for the Command.

The Commander Mobile Command, with headquarters in St. Hubert, Quebec, commands all land forces in Canada and exercises operational control over Air Command's "10 Tactical Air Group" which provides Mobile Command with light and medium air transport and four squadrons of tactical helicopters.

A component of Land Forces in Canada is the Militia whose role is to enhance the deterrent capability of the regular force and to provide support in ongoing tasks and activities. The Militia is organized into five areas and 22 districts across Canada. Containing some 16,000 personnel, militia units are being tasked to provide formed, operationally ready sub-units for the defence of Canada.

Overview of Operations

To provide combat ready land forces to meet Canada's defence commitments as detailed at page 22, Land Forces in Canada will conduct various appropriate training programs and exercises, and provide personnel for United Nations Peacekeeping tasks. The capabilities of Land Forces in Canada will be further enhanced by a number of capital projects.

Training and Exercises: Mobile Command will conduct division and brigade level training during Fiscal Year 1985-86. A major exercise, Rendez-vous 85 and various brigade directed exercises will concentrate on general warfare training in both summer and winter conditions. A separate series of exercises will provide similar training up to combat team level for reserve force elements.

Training to be conducted in support of defence of Canada commitments will include an airborne battle group exercise in northern Canada, a battalion group participation in the United States Readiness Command Exercise BRIMFROST in Alaska, company level sealift and Arctic exercises, a reconnaissance of northern areas and northern communications exercises.

Training will be conducted in support of NATO commitments and will include participation in "4 Canadian Mechanized Brigade Group" Exercises FALLEX 85 and REFORGER 86. All training will include both regular and reserve force personnel. Units of Mobile Command will exercise in support of the ACE Mobile Force (Land) commitment in training exercises to be conducted in Norway. Elements of the "Canadian Air and Sea Transportable Brigade Group" designated to the defence of North Norway, will also participate in an exercise in Norway. Mobile Command will support British and German army training at bases in Alberta and Manitoba.

Various Mobile Command units will participate in a number of small unit exchanges with the United States, France, Norway and Australia. The purpose of these exchanges is to enhance general military skills and to develop an understanding of procedures and techniques used by our allies.

Individual training will be conducted throughout the year at the Combat Training Centre at Gagetown, New Brunswick, at Mobile Command Battle Schools and all regular and reserve force units.

Two Mobile Command units will serve on peacekeeping duties in Cyprus and the Command will provide individual replacements to the United Nations Disengagement Observer Force on the Golan Heights.

Mobile Command will provide extensive individual support to other commands of the Canadian Forces, as well as unit participation or support to ceremonial, national interest and sporting events across the country.

In addition, Land Forces in Canada provide the major part of Canada's contribution to United Nations peacekeeping operations. Specifically, these involve the following:

- United Nations Truce Supervision Organization based in Jerusalem where 20 Canadian military personnel are deployed with other nationals in Israel and surrounding countries;

- United Nations Disengagement Forces based on the Golan Heights where approximately 220 logistics, signals and observer personnel serve in a multi-national contingent. This contingent is supported by regular Canadian Forces transport aircraft flights;

- United Nations Force in Cyprus where a combat arms unit of approximately 550 personnel serves as part of a multi-national contingent which maintains the security of the buffer zone between Greek and Turkish Cypriots. The Canadian contingent is rotated every six months and resupplied weekly by Canadian Forces aircraft flights; and

- the Canadian Forces will continue to maintain one infantry battalion and supporting elements on standby for these and other peacekeeping operations as may be required.

Capital Projects: As a part of the continuing efforts to increase the capability of Land Forces in Canada in the performance of their assigned roles, the following capital projects are either underway or planned for 1985-86:

	1985-86 $ millions
• 2½ ton truck replacement (see page 55);	10.4
• acquisition of improved chemical warfare clothing (see page 57);	4.0
• acquisition of military operational and support trucks (see pages 55, 62);	43.9
• acquisition of 1¼ ton cargo truck (see page 55); and	2.8
• acquisition of general purpose armoured vehicles (see page 55).	9.0

C. Air Forces in Canada (Air Command)

Objective

To provide combat ready air forces to meet Canada's defence roles/missions as follows:

- surveillance and control over Canadian airspace;
- defence of North America, in cooperation with United States forces;
- air support for Maritime and Land Forces in Canada;
- airlift requirements of the Canadian Armed Forces;
- coordination and conduct of search and rescue operations; and
- assistance to civil authorities in the event of emergency or disaster.

Resources Summary

The Air Forces Activity will account for approximately 28.8% of total Defence Services Program expenditures and 27.2% of total person-years.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures						
Personnel	1,020,564	32,160	976,723	32,328	927,096	31,005
Operations and Maintenance	1,047,133		963,326		910,554	
Operating Requirement	2,067,697		1,940,049		1,837,650	
Capital	714,249		844,307		797,181	
Total Requirement	2,781,946		2,784,356		2,634,831	
Less Revenue Credited to the Vote	81,167		79,893		121,769	
Net Requirement	2,700,779	32,160	2,704,463	32,328	2,513,062	31,005

The decrease of $3.7 million in 1985-86 requirements over the 1984-85 forecast, results from the following:

	$ millions
• general cost increase;	163.5
• decrease of 18 military and 150 civilian person-years;	(1.6)
• net increase in capital funding primarily related to the Dash 8 aircraft; and	49.3
• reduced spending on the CF18 fighter aircraft project.	(214.9)

Description

Air Command is divided into six functional air groups reporting to a headquarters in Winnipeg, Manitoba. While the groups exercise operational command over their assigned resources, the Commander Air Command is responsible for flight safety, as well as air doctrine and standards relating to flying operations throughout the Canadian Forces, including units located outside Canada.

Fighter Group: The variety of tasks assigned to Canada's newly acquired CF18 dictated the establishment of an organization for the centralized control and coordination of all Canadian-based fighter aircraft operations. Fighter Group was formed in 1982. With headquarters at North Bay, Ontario, Fighter Group incorporates the two CF5 squadrons previously under 10 Tactical Air Group, all elements of the former Air Defence Group involving the ground environment systems and the fighter activities at Cold Lake, Alberta.

Air Transport Group: Headquartered at Trenton, Ontario, the Air Transport Group provides the Canadian Forces' air transport mobility, navigation training and search and rescue capability. To perform these functions, Air Transport Group has five transport squadrons, four transport and rescue squadrons and 1 Rescue Unit, a transport/training squadron, plus two squadrons and two Regular support units associated with the Air Reserves.

Maritime Air Group: Headquartered at Halifax, Nova Scotia, the Maritime Air Group provides combat ready maritime air forces for operational deployment in the defence of Canada. To perform these functions, Maritime Air Group has three operational and one training patrol squadrons, two helicopter anti-submarine squadrons, two utility squadrons, plus associated training and evaluation units.

10 Tactical Air Group: This Air Group with headquarters at St. Hubert, Quebec, provides combat ready tactical helicopter forces to support the operations and training of Mobile Command. "10 Tactical Air Group" posesses four squadrons of CH-136 Kiowa light observation and CH-135 Twin Huey utility tactical transport helicopters. In addition, it has two squadrons of medium-lift CH-147 Chinook helicopters, and operational control of four Air Reserve Squadrons in Montreal and Toronto which are receiving operational training on the Kiowa helicopter. To support the Air Reserves Squadrons, "10 Tactical Air Group" has Reserves Support Units in Montreal and Toronto.

14 Training Group: Headquartered in Winnipeg, Manitoba, 14 Training Group is responsible for training specified personnel to initial trade/classification standards and to provide other training as directed by the Commander Air Command. 14 Training Group maintains eight different schools covering such areas as pilot and navigator training, survival and meteorology. This Air Group also has responsibility for aircrew selection and the Snowbirds air demonstration squadron.

Air Reserve Group: The role of this Air Group is to support the regular force both operationally and through the augmentation of bases and units. Under the operational command of the respective group commanders, Air Reserve squadrons fly special airlift, coastal surveillance, fisheries patrols, sovereignty and search and rescue in direct support of Air Transport Group, 10 Tactical Air Group, and Maritime Air Group.

Overview of Operations

The variety of tasks assigned to Air Forces in Canada requires skills and capabilities in a number of specialized areas of air operations. These skills and capabilities are generated and maintained through a comprehensive program of training and operational activities planned around the six functional air groups of Air Command.

Training and Exercises: Operations and operational training for 1985-86 will continue at current levels and will include the following:

Fighter Group: Tactical Fighter operations and training will cater to the defence of Canada and the reinforcement of North Norway and will include support to operations and training by Mobile Command and Maritime Command to meet Canada's commitments to NORAD and NATO. These include participation in ongoing NORAD and national exercises to maintain a high level of combat capability, and participation in joint exercises in NATO Northern Region. Some of the major exercises are indicated below:

- ten air-to-air refuelling exercises in the Bagotville, Quebec or Cold Lake, Alberta areas to maintain air refuelling proficiency for both fighter and tanker crews. The air-to-air refuelling capability is necessary to meet the NATO North Flank commitments. When the Cold Lake area is used, Air Combat Training will be conducted using the Air Combat Manoeuvring Range facilities;

- Canadian Forces assigned to NORAD participate annually on a minimum of three Region "BRAVE" exercises, three Multi Region "CHIEF" exercises and a variety of Region simulation exercises for Battle Staff training;

- two Maple Flag and one Red Flag exercises, which are held in co-operation with the United States Air Force to enhance tactical fighter skills. Maple Flag exercises are hosted by Canada, while Red Flag exercises are hosted by the United States; and

- deployment of eight aircraft and support to Norway.

Air Transport Group: Air Transport operations and training will continue operating to capacity with regular scheduled flights, Arctic re-supply and support to Mobile, Maritime and other Air Command units. Some of the major exercises are:

- two semi-annual exercises involving tactical CC-130 Hercules crews and aircraft. The Canadian Forces and the Royal Air Force exchange information on equipment, procedures, training and tactics. A similar annual exercise will involve Canadian Forces, Royal Australia Air Force and Royal New Zealand Air Force crews and aircraft;

- an annual tactical competition hosted by United States Air Force Military Airlift Command;

- six Tactical Airlift Exercises which are co-ordinated with, whenever possible, Special Service Force Continuation Paratroop Training and exercises;

- support to and participation in two MAPLE FLAG and one RED FLAG exercises; and

- an annual Search and Rescue competition alternately hosted by United States Air Force Air Rescue and Recovery Service and Air Transport Group.

Maritime Air Group: Maritime Air Operations and training will be conducted to provide combat ready maritime air forces for operational employment by the Commander Maritime Command/Commander Maritime Forces Pacific. Particular emphasis will be placed on surveillance operations to monitor Soviet submarine activity in both the Atlantic and Pacific Oceans. Other major support operations will include surveillance missions in support of the Department of Fisheries and Oceans within the off-shore Exclusive Economic Zone and the provision of Sea King helicopters to HMC ships. Major exercises are:

- two NATO exercises to demonstrate and improve the readiness of NATO to conduct maritime operations and maintain control of the sea lines of communication;

- two national exercises to test participating maritime forces in all aspects of coordinated operations concerned with multi-threat warfare;

- one international exercise involving the navies of Pacific Rim nations; and

- three joint maritime warfare exercises in the United Kingdom operations areas designed to provide training in a multi-threat environment.

10 Tactical Air Group: 10 Tactical Air Group operations and training will be conducted to provide combat-ready tactical aviation for Mobile Command. Tactical helicopter forces will be participating in varied exercises and operations in support of land forces and national tasking. Some major exercises are:

- RENDEZVOUS 85. A major army exercise at division level that will involve all 10 Tactical Air Group units;
- three winter exercises to practice the conduct of airmobile operations;
- participation in an internal security exercise;
- annual Air Reserve Training Camp; and
- participation in MAPLE FLAG.

Capital Projects: Efforts to enhance the capability of Air Forces in Canada to carry out the roles assigned to it include a number of capital projects. Major capital projects continuing or planned for 1985-86 include:

	1985-86 $ millions
• CF18 fighter aircraft (see pages 55, 62);	741.2
• Dash 8 aircraft (see pages 55, 64);	59.2
• CC130 Hercules aircraft replacement (see page 55); and	19.1
• update of three more Voyageur helicopters for search and rescue activity (see page 55).	5.2

D. Canadian Forces in Europe

Objective

To provide combat-ready land and air forces for the defence of Central Europe.

Resource Summary

The Canadian Forces in Europe Activity will account for approximately 9.4% of total Defence Services Program expenditures and 5.0% of total person-years.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures						
Personnel	233,956	5,885	221,533	5,885	208,989	5,639
Operations and Maintenance	231,304		218,689		207,738	
Operating Requirement	465,260		440,222		416,727	
Capital	432,903		423,150		439,639	
Total Requirement	898,163		863,372		856,366	
Less Revenue Credited to the Vote	15,177		14,851		13,515	
Net Requirement	882,986	5,885	848,521	5,885	842,851	5,639

The increase of $34.5 million in 1985-86 requirements over the 1984-85 forecast, results from the following:

	$ millions
• general cost increase; and	53.5
• net decrease in spending for a number of capital projects.	(19.0)

Description

Canadian Forces Europe comprises all Canadian formations, units, elements and personnel assigned to Supreme Allied Commander Europe. The Commander Canadian Forces Europe exercises command and control over these forces in theatre and has, in addition, administrative control of Canadian forces stationed in the Middle East and Cyprus. During war, operational command of Canadian Forces Europe's fighting formations would be transferred to NATO; however, the Commander Canadian Forces Europe would maintain national command at all times.

Canadian Forces Europe is unique in the Canadian Forces since it is neither a single environmental command like Maritime Command nor is it strictly a functional command such as Communications Command; rather it is an integrated geographic command comprising major land and air combat forces. These forces are, in part, stationed in theatre and, in part, earmarked for deployment to Canadian Forces Europe from Canada in time of crisis.

The European-based formations, 4 Canadian Mechanized Brigade Group and 1 Canadian Air Group, are garrisoned at Canadian Forces Europe's two bases, Lahr and Baden-Soellingen, located in the southwest corner of the Federal Republic of Germany. The national command headquarters and the two in-theatre formation headquarters are located in the Lahr Caserne.

Overview of Operations

Training and Exercises: Operations and operational training for the two European-based formations, 1 Canadian Air Group and 4 Canadian Mechanized Brigade Group, will continue at current levels. Normal training planned for 1 Canadian Air Group will continue to provide a high level of operational realism as the majority of training takes place "in theatre". Further benefits are available from mutual training with other Allied forces, including the full spectrum of NATO interoperability exercises and Tactical Evaluation. A major improvement to 1 Canadian Air Group's operational capability will be achieved through the introduction of the first combat-ready CF18 squadron, and the commencement of training for a second squadron.

4 Canadian Mechanized Brigade Group will continue its annual training program in all phases of war from the individual to sub-unit, unit and combined arms training. As in previous years, widespread use will be made of Northern and Central Army Group training areas and Bundeswehr training facilities.

In addition to the European-based formations, various combat forces have been designated for deployment to Canadian Forces Europe in time of crisis. These forces, which would be drawn from Canadian based land and air force units, consist of:

- Canadian Air Sea Transportable Brigade Group;
- Allied Command Europe Mobile Force (Land);
- Allied Command Europe Mobile Force (Air);
- two Rapid Reactor Squadrons; and
- augmentation and reinforcement forces.

Capital Projects: Major equipment programs affecting Canadian Forces Europe have already been dealt with under Air Command and Mobile Command requirements.

E. Communications Services (Communications Command)

Objective

To provide the strategic communications necessary for operational, administrative and logistical support of the Canadian Forces and emergency government.

Resource Summary

The Communications Services Activity will account for approximately 3.4% of total Defence Services Program expenditures and 4.0% of total person-years.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures						
Personnel	171,142	4,757	163,217	4,754	156,913	4,597
Operations and Maintenance	100,447		90,297		66,258	
Operating Requirement	271,589		253,514		223,171	
Capital	81,658		43,871		47,308	
Total Requirement	353,247		297,385		270,479	
Less Revenue Credited to the Vote	36,192		30,600		26,645	
Net Requirement	317,055	4,757	266,785	4,754	243,834	4,597

The increase of $50.3 million in 1985-86 requirements over 1984-85 forecast, results from the following:

	$ millions
• general cost increase;	19.2
• increase of 3 civilian person-years; and	.2
• net increase in funding for capital projects such as the Restricted Access System project, Search and Rescue Satellite and the Aeronautical Communications System project.	30.9

Description

While Communications Command Headquarters is centered in Ottawa, operational responsibility is decentralized to six regional communication groups located at: Vancouver, British Columbia; Winnipeg, Manitoba; Trenton, Ontario; Ottawa, Ontario; St Hubert, Quebec; and Halifax, Nova Scotia. These groups are, in turn, responsible for 17 regular force communications squadrons and 21 units of the Communications Reserve.

Embodied as a formation within Communications Command is the Canadian Forces Supplementary Radio System. Consisting of five stations and a research squadron, this system collects data in support of long distance arctic communication research and provides high frequency radio direction-finding assistance to search and rescue operations.

In support of both regular and reserve forces of the military, the Communications Reserve consists of more than 1,500 personnel in 21 units located in every major community.

Overview of Operational Activities

Training and Exercises: Operations and operational training for all elements of Communications Command will continue at present levels. Equipment capability and adequacy of resources will be tested and evaluated through continuing participation in and support to exercises and operations sponsored by other operational Commands. In addition, the Command plans to conduct the following exercises: maintenance of communications capability, via mobile radio, in the Eastern and Western Arctic and north of the 60th parallel; exercise of mobile radio detachments in support of emergency government and civil emergency operations and requirements; and to evaluate procedures and enhance capability to maintain effective communications facilities through failure simulation. Communications Command is committed to operate, maintain and support a wide variety of communications equipment and systems which can be classified under the broad headings of message handling and telephone communications.

Message handling for the Canadian Forces is provided primarily through the operation and maintenance of the Automated Defence Data Network, a computer-based message-switching network. The system consists of three major computer-controlled nodes located at Debert, Nova Scotia, Borden, Ontario, and Penhold, Alberta. The nodes switch information over high speed data circuits through 15 concentrator sites that provide access to more than 130 Canadian Forces installations in Canada and abroad. By international agreement, Communications Command systems interface with similar networks operated by Canada's NORAD, NATO and Commonwealth partners.

Communications Command manages the Defence Telephone System which provides a wide range of telephone services to the Department. The basic components of this system are the Canadian Switched Network which is a military telephone network; the Defence Telephone Network, which offers those services generally available to most business firms such as commercial direct distance dialing; Wide-Area Telephone Services, and access to the Government Telecommunication Agency intercity services.

Communications Command operates the Military Aeronautical Communication System providing Canadian Forces aircraft with worldwide voice communications. In addition, the command is responsible for the Canadian Forces Warning and Reporting System, a nation-wide system of message centres established to operate in support of emergency government operations.

Major capital projects planned or underway for 1985-86 include:

	1985-86 $ millions
• restricted access system project (see page 56);	15.5
• replacement of communications receivers (see page 56);	3.5
• search and rescue satellite (see page 56); and	13.4
• aeronautical communications system (see page 56).	15.7

F. Personnel Support

Objective

To provide personnel support services for the Canadian Forces in the areas of:

- personnel development - recruitment, individual training and education;
- personnel management - administration, career assignment, morale, physical fitness and amenities; and
- health services - medical and dental.

Resource Summary

The Personnel Support Activity will account for approximately 12.9% of total Defence Services Program expenditures and 16.2% of total person-years.

Figure 17: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Less Revenue Credited to the Vote	**34,243**		33,133		32,126	
Net Requirement	**1,209,936**	**19,115**	1,112,674	19,230	1,027,657	21,145

The increase of $97.3 million in 1985-86 requirements over the 1984-85 forecast results from the following:

	$ millions
• general cost increase;	73.3
• increase of 33 military offset by a reduction of 148 civilian person-years;	.8
• increased entitlements under the Supplementary Retirement Benefits Act; and	29.1
• net decrease in overall capital project spending.	(5.9)

Description

The Personnel Support Activity is organized around the delivery of three main services: training; medical and dental services; and personnel administration.

The Canadian Forces Training System is tasked with training people to meet the needs of operational commanders. Located at Trenton, Ontario, the Commander Canadian Forces Training System exercises control over five training bases: Borden and Kingston, Ontario; Chilliwack, British Columbia; Cornwallis, Nova Scotia; and St Jean, Quebec. These bases accommodate 15 basic training and trades schools. As well, the Canadian Forces Training System encompasses three language schools and lodges and supports two of the three military colleges.

Medical and dental facilities are provided at all bases and most stations for military personnel and where appropriate their dependents in proportion to the Armed Forces population and accessibility to civilian health facilities. Over the period 1981-82 through 1983-84 the daily non-effective rate ie., the number of persons per thousand population who are off-duty because of hospitalization, fell from 4.2 to 3.7. Similarly, the number of dentally fit Canadian Forces personnel has increased substantially from 82% to 89%.

Personnel administration functions encompass all Canadian Forces recruiting units, the three military colleges, the four officer professional development institutions in Kingston and Toronto, and the Personnel Group at National Defence Headquarters. The Personnel Group at National Defence Headquarters encompasses two separate personnel systems; military and civilian as appropriate. The Group is responsible for personnel policy and administration, manpower distribution, career planning and development, health services, military and civilian training including academic upgrading, post graduate training, compensation and benefits, dependents' education, chaplain services and conditions of service.

Overview of Capability

A number of capital expenditures are planned for the 1985-86 estimates year in order to improve upon the delivery of personnel support services. These include:

	$ millions
• a new 100 bed Canadian Forces hospital and dental clinic at Halifax, Nova Scotia (see page 54);	.5
• update of data-processing facility at Royal Roads Military College (see page 56);	.8
• providing a new training building for the School of Administration and Logistics at Borden, Ontario (see page 54); and	2.3
• a new 25 bed Canadian Forces hospital and dental clinic at Esquimalt, British Columbia (see page 55).	3.2

G. Materiel Support

Objective

To provide materiel support services to the Canadian Forces in the areas of:

- research and development;
- engineering and maintenance;
- construction engineering and real property management; and
- supply, procurement, storage, transportation and quality assurance.

Resource Summary

The Materiel Support Activity will account for approximately 6.4% of total Defence Services Program expenditures and 8.4% of total person-years.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

2661

The increase of $63.0 million in 1985-86 requirements over the 1984-85 forecast results from the following:

	$ millions
• general cost increase;	36.5
• increase of 209 military offset by a reduction of 505 civilian person-years; and	6.1
• net increase in funding for capital projects such as the Land Engineering Test Establishment Development program.	20.4

Description

The Materiel Support Activity encompasses the ADM(Materiel) Group at National Defence Headquarters, the Defence Research Establishments and specific Canadian Forces field units associated with the delivery of support services in the areas of defence research; engineering and maintenance; construction and properties management; and supply.

The task of defence research is to provide scientific and technological support to the Canadian Forces in respect of defence techniques, procedures, and equipment. There are six Defence Research Establishments located across Canada.

Engineering and Maintenance is concerned with the administration of the Life Cycle Materiel Management activities for all equipment in the Canadian Forces and their operational and maintenance support systems. Engineering starts at the Project Development Stage, and continues through Project Definition and Project Implementation. Maintenance activities are concerned with the full In-Service Life of the equipment, including its ultimate disposal after it has ceased to fulfil a useful function in the Canadian Forces inventory. The equipment inventory ranges from ships, tanks and aircraft to communications, computer and electronic equipments as well as numerous test equipments. Eight field units are located in British Columbia, Alberta, Ontario and Quebec, and are responsible for evaluation and testing.

Construction engineering services provide for the administration of all major construction projects, real property management and life-cycle management activities for the Canadian Forces infrastructure.

Supply services consist of five components: Procurement and Supply which is responsible for the procurement of capital equipment and systems, including management of the national defence inventory; Supply Systems which is responsible for the management of the Canadian Forces computerized supply system, including the operation of four major supply depots and other related field units and functions; Transportation which provides for the movement of materiel, personnel, furniture and effects, management and operation of an airlift capability, and postal services for Canadian Forces at home and abroad; Quality Assurance which provides inspection services for all defence production/repair facilities in Canada. There are six quality assurance units located in Nova Scotia, Quebec, Ontario and Alberta; and Ammunition services which are responsible for the maintenance, life cycle management, storage, and related policies for ammunition.

Overview of Capability

The level of military capability provided by the Materiel Support Activity is to a large extent dependant upon the availability of trained specialist personnel to maintain an appropriate level of defence research and development, to initiate and manage the capital acquisition projects required to effect the capital re-equipment program, to provide engineering and maintenance services for in-service equipment and to operate the Canadian Forces Supply System.

The role of Research and Development is to harness science and technology so as to improve the capabilities and increase the effectiveness of the Canadian Forces. The Research and Development Branch utilizes its internal resources, industry, other government departments, universities, and our allies to accomplish that role. Aside from the contribution to the Canadian Forces, this effort contributes to the development of Canadian industry through the transfer of new technologies.

The resource requirements identified for this Activity in fiscal year 1985-86 are required to:

- provide requisite life cycle materiel management of major operational equipment including the engineering support, supply management, quality assurance as well as the warehousing and distribution for 1,300,000 line items of materiel in the Department of National Defence inventory encompassing clothing, micro circuits, engines and transmissions, and common hardware;

- initiate procurement and provide attendant legal, contractual and financial administration for approximately 11,000 capital and 28,000 operations and maintenance contracts to acquire new and replacement capital equipment and facilities and replenish inventory consumed in support of ongoing operations, maintenance, and research and development activities;

- provide project management for over 300 capital projects including 16 major crown projects related to the acquisition of new equipment, construction of new facilities and the conduct of research and development;

- provide engineering services associated with the life-cycle management for the infrastructure of 33 bases and 24 stations;

- provide engineering, maintenance and supply services associated with 41 major repair and overhaul programs for existing fleets of ships, aircraft, military pattern vehicles and other operational equipment;

- operate 34 ADM(Materiel) field units which provide engineering, construction, maintenance, test, research, development, warehousing, and quality assurance services. These facilities include workshops, ranges, test establishments, laboratories and agencies; and

- provide the scientific and technological capability to support the acquisition of new equipment and the achievement of Departmental objectives through the conduct of a research and development program including 35 major development projects, about 300 minor development projects and 17 on-going research programs covering all areas of defence technology.

H. Policy Direction and Management Services

Objective

To provide overall direction and control to the Department of National Defence in the areas of:

- defence policy;
- financial, management, and legal services;
- direction to operational commands;
- emergency planning; and
- Canadian contributions to NATO.

Resource Summary

The Policy Direction and Management Services Activity will account for approximately 4.9% of total Defence Services Program expenditures and 4.0% of total person-years.

Figure 19: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operating Expenditures

Operations and Maintenance	97,996		88,074		72,101	
Operating Requirement	317,686		295,967		272,513	
Capital	44,933		21,281		5,038	
Grants and Contributions	140,772		125,823		140,272	
Total Requirement	503,391		443,071		417,823	
Less Revenue Credited to the Vote	40,175		38,512		38,327	
Net Requirement	463,216	4,674	404,559	4,423	379,496	3,964

The increase of $58.7 million in 1985-86 requirements over 1984-85 forecasts, results from the following:

	$ millions
• general cost increase;	28.0
• increase of 68 military and 183 civilian person-years;	2.2
• net increase in funding for capital projects primarily related to automated data processing; and	13.6
• increase in grants and contribution expenditures primarily related to the NATO infrastructure program and military budgets.	14.9

Description

The Policy Direction and Management Services Activity encompasses the formulation and recommendation of defence objectives and policy options and the elaboration of government approved defence policy to provide overall direction for developmental planning in the Department and the management of the Defence Services Program. Equally important, is the command and control function, within which the detailed operational, materiel, personnel, and financial preparations are made for times of crisis or war. This function also embodies the command and control of the "day-to-day" operations of the Canadian Forces by the Chief of Defence Staff and delegated subordinate commanders. The Activity also includes the development, and general direction of management information systems, consulting, audit, evaluation, financial and accounting services within the Department.

NATO Contributions represent direct payments toward common NATO activities which consist of:

- NATO Military Budgets and Agencies. Canada's share of the cost of operating the various NATO International Military Headquarters as well as those of certain NATO Agencies of which Canada is a member;

- NATO Common Funded Infrastructure. Canada's share of the cost of constructing NATO military installations that are jointly used by various NATO nations; and

- NATO Airborne Early Warning and Control System. Canada's contribution towards the cost of acquiring a fleet of 18 Boeing 707 aircraft and associated ground sites.

The Canadian share of the funding for NATO common activities is calculated on a percentage basis for each of the various types of activities. These percentages are determined through negotiations between representatives of the various NATO nations. Confirmations of Canada's percentage shares of NATO common funding arrangements are subject to Cabinet approval for new undertakings or changes to existing arrangements. The terms and conditions for each type of contribution are detailed by the Department of National Defence and are subject to the approval of the Treasury Board of Canada.

The costs associated with these contributions are detailed at page 59.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Defence Services Program expenditures by object are presented in Figure 20.

Figure 20: Expenditures by Object ($000)

Term Employees (Casual Labour)	1,579	2,824	2,764		22,990

NOTE: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Military Personnel Expenditures

Figure 22: Person-Years and Salary Provision

	Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
General/Lieutenant General	9	9	8	75,100-105,050	80,471
Major-General	27	27	24	65,940- 77,510	74,967
Brigadier-General	78	77	76	58,050- 68,300	61,320
Colonel	335	331	331	57,024- 59,220	61,090
Lieutenant-Colonel	1,013	1,004	982	49,524- 52,740	53,897
Major	3,305	3,216	3,167	42,732- 47,940	47,810
Captain	7,005	6,908	6,849	31,620- 41,760	39,600
Lieutenant	2,722	2,291	2,300	21,720- 28,512	23,772
Officer Cadet	2,500	2,500	2,000		11,057
Chief Warrant Officer	855	827	832	37,092- 38,676	39,370
Master Warrant Officer	2,347	2,289	2,277	33,432- 36,396	35,803
Warrant Officer	4,705	4,596	4,574	30,300- 34,080	32,543
Sergeant	10,387	10,290	10,254	27,192- 32,220	29,733
Corporal	29,049	26,574	26,273	23,640- 30,192	26,708
Private	18,403	21,108	21,657	10,512- 18,732	16,730
Total	82,740	82,047	81,604		

NOTE: The current salary range column shows the salary ranges by rank at October 31, 1984. The salary ranges do not include rates of pay for the specialist navigator, pilot, medical, dental and legal categories. The average salary column reflects the estimated base salary costs including allowance for annual increments, promotions and merit pay divided by the person-years for the rank. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

Civilian salaries and wages shown in the 1985-86 Main Estimates provide for a total of 35,587 civilian personnel, a decrease of 1121 person-years over the provision shown in the 1984-85 Main Estimates. This reduction is due in part to the termination of the Youth Employment Program, but primarily to a Treasury Board decision that certain person-years utilized exclusively for short-term casual employment need be subject to budgetary control only. This arrangement will increase management flexibility and efficiency over the use of these labour resources.

Military pay provides for a total of 82,740 military personnel, an increase of 693 person-years over the provision shown in the 1984-85 Main Estimates. The personnel increase is required to manage the expanding capital acquisition program plus ongoing operational requirements of the Canadian Forces. The distribution of military person years by activity for 1985-86 is as follows:

Maritime Forces	11,064
Land Forces in Canada	19,114
Air Forces in Canada	24,131
Canadian Forces in Europe	5,881
Communication Services	3,436
Personnel Support	12,829
Material Support	4,041
Policy Direction and Management Services	2,244
	82,740

3. Capital Expenditures

Defence Services Program capital expenditures by major category are presented in Figure 23.

Figure 23: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Construction or acquisition of land, buildings and works	**157,028**	161,425	120,901

Total Contributions	**419,521,000**	375,510,000	353,035,551
Total Grants and Contributions	**421,172,551**	377,079,404	354,552,840

B. Cost Analysis

The Defence Services Program's 1985-86 Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments, less the receipts and revenues credited to the vote. Other cost items as well as receipts credited to the Consolidated Revenue Fund must also be taken into consideration when determining the full cost to operate the program.

Figure 26: Net Cost of Program by Activity ($000)

	1985-86 Total Expenditures	Add Other Costs	Deduct Revenue	**Net Cost**	1984-85 Net Forecast
Maritime Forces	1,803,179	136,881	(17,491)	**1,922,569**	1,646,304
Land Forces in Canada	1,458,875	144,092	(54,223)	**1,548,744**	1,474,479
Air Forces in Canada	2,781,946	263,351	(81,167)	**2,964,130**	2,963,574
Canadian Forces in Europe	898,163	5,205	(15,177)	**888,191**	854,720
Communications Services	353,247	2,751	(36,192)	**319,806**	270,016
Personnel Support	1,244,179	107,511	(34,243)	**1,317,447**	1,216,814
Materiel Support	605,696	6,172	(2,285)	**609,583**	547,499
Policy Direction and Management Services	503,391	3,198	(40,175)	**466,414**	408,314
	9,648,676	669,161	(280,953)	**10,036,884**	9,381,720

Other costs of $669.2 million consist of:	$ millions
• receipts credited to revenue;	(26.5)
• accommodation provided without charge by Department of National Defence;	594.8
• accommodation provided without charge by Department of Public Works;	41.2
• cheque issue services provided without charge by Department of Supply and Services;	4.8
• employee surgical - medical insurance provided without charge by Treasury Board; and	46.8
• other.	8.1

C. Revenue Analysis

The ADM(Finance) is responsible for collection, control and management of all recoverable funds in respect of supplies and services provided to service members, other federal government departments and agencies, and foreign governments. The 1985-86 revenue estimates are based upon forecast price increases, adjustments in recoverables from other government agencies and reductions in revenues from NATO and North American Air Defence operations.

Figure 27: Summary of Vote Netted Revenue ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Deductions from Members for Rations, Quarters and Clothing	**124,894**	114,920	115,031
Material and Services provided to other Government Departments	**81,748**	78,123	126,778
Medical and Dental Services	**16,864**	16,897	14,702
Seconded Personnel	**2,665**	2,464	2,526
Provincial School Grants and Tuition Fees	**13,770**	12,184	12,781
Other Recoveries	**41,012**	45,880	39,029
NATO Common-Funded Projects	**-**	-	777
Program Total	**280,953**	270,468	311,624

In addition to recoverable funds collected for credit against departmental expenditures, the Department also collects revenues on behalf of the Government, for such items as recoveries from provinces for humanitarian assistance and from the United Nations for peacekeeping activities, which are credited to the Consolidated Revenue Fund.

Figure 28: Credits to Consolidated Revenue Fund ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenue	**26,500**	28,000	24,717
Program Total	**26,500**	28,000	24,717

D. Details on Major Projects

1. Canadian Patrol Frigate

In July 1983, following an extensive and competitive contract definition phase, and an evaluation of contractor proposals, the contract for the construction of warships was awarded to Saint John Shipbuilding and Drydock Ltd. Three of these warships will be built on the east coast and three in the province of Quebec. Delivery of the first ship is expected in early 1989 and the last ship by early 1992.

The total estimated cost of the project is $5.205 billion of which $660 million is forecast to be spent by the end of 1984-85. It is expected that a further $468 million will be spent in 1985-86 leaving a balance to be spent in future years of $4.076 billion.

2. Military Operational and Support Trucks

The Military Operational and Support Trucks project is designed to provide the land forces with adequate ground transportation for tasks related to command, communications, liaison, reconnaissance, weapons deployment, logistics and personnel services. The overall project includes the acquisition of 1900 new ¼ ton trucks and the project definition phase of a second project which will lead to the production in Canada of a replacement for the 5 ton military pattern truck. In September 1983, Treasury Board approved the acquisition of 1900 ¼ ton trucks at a cost not to exceed $112.1 million and gave preliminary approval for the purchase of up to 700 5 ton trucks at an estimated cost of $136.6 million. Expenditures approved for the 5 ton truck portion are limited to $6.178 million for the project definition phase. It is expected that Treasury Board approval for implementation of the 5 ton truck phase will be sought by December 1986. Spending for 1985-86 is estimated to be $43.9 million.

3. New Fighter Aircraft

In April 1980 the government chose the F18A as the new fighter aircraft for Canada. A contract was signed with McDonnell Douglas Corporation to supply 138 new fighters over a period of about nine years.

The total estimated cost of the project is $4.803 billion of which $3.109 billion is forecast to be spent to the end of 1984-85. During the estimates year 1985-86 it is expected that $741 million will be spent with the balance of $953 billion to come in future years. As of 31 July 1984 a total of 39 aircraft had been delivered. It is expected that to the end of 1985-86, 80 aircraft will have been received.

4. Tribal Class Update and Modernization Project

The four DDH 280 or Tribal Class ships entered operational service in 1972 and 1973 and will reach their mid-life point in 1987-88. The objective of this project is to ensure that these destroyers maintain a capability into the next century to effectively perform operational missions which may be assigned to them. This requires the reconfiguration of the Tribal Class vessels and the addition of new, more modern equipment.

The government approval of the Canadian Patrol Frigate in July 1983 also gave approval-in-principle to proceed with the Tribal Class update project. In January 1984, Treasury Board gave preliminary approval to the project and approved the allocation of $17.4 million for project definition by contracts with industry. A submission to Treasury Board will be put forward on completion of project definition for further approval.

5. Destroyer Life Extension

The Destroyer Life Extension Project is designed to extend the operational life of selected warships pending their replacement by newly constructed combat capable ships. The project consists of the purchase and selective replacement of obsolete navigation, communication and combat systems in sixteen of nineteen steam destroyers. Ten of the sixteen ships will receive the total Destroyer Life Extension improvement package and the remaining six will receive improvements designed to maintain them in "safe to go to sea" condition. The program is being accomplished by extended refits in Canadian shipyards and dockyards which will generate about three million manhours of work in the ship repair industry.

The project was initially approved in January 1980 for the refit of the first two ships. In August 1980, the Treasury Board approved a total of $213.8 million in Capital and Operations and Maintenance funds to complete the project. The last ship should be upgraded by 1987. The estimated 1985-86 expenditures will total $19.2 million in Capital and Operations and Maintenance funds.

6. Canadian Tactical Towed Array Sonar System

This project to evaluate, procure and install towed array sonar equipment in the six new frigates and the two destroyers of the 265 class, and to acquire an additional system for training, was given preliminary approval by Treasury Board in April 1984 at an estimated cost of $112 million. The Treasury Board also authorized up to $11.1 million of the above for the procurement of sonar equipment for installation in HMCS Annapolis for trials at sea.

Significant benefits to Canadian industry will be provided in that most of the development and production of shipboard processing and display equipment will be carried out in Canada, as will all system installation and integration work. Further, the successful and timely conclusion of the integration of the Canadian developed electronic package with the proven array will assist Canadian industry in persuing potential offshore military markets.

7. Air Command Headquarters, Winnipeg

The project is to construct an office building to accommodate Air Command Headquarters at Canadian Forces Base Winnipeg. The existing accommodation is sub-standard, deteriorated and the utilities systems are extremely inefficient and costly. In March 1984, Treasury Board approved an expenditure level of $28.4 million for the new building.

The currently estimated total cost is $27.4 million, of which $8.4 million will have been spent by the end of 1984-85, with an additional $14.2 million planned for 1985-86. The project should be completed by August 1986.

8. Maritime Command Headquarters, Halifax

In April 1984, Treasury Board approved an expenditure level of $24 million to construct a building to accommodate Maritime Command Headquarters. The building will replace eight different buildings in three separate congested areas in Halifax. None of the existing buildings are suitable for renovation or expansion to accommodate a consolidated Command Headquarters.

The currently estimated cost is $19.6 million, of which $5.1 million will have been spent by the end of 1984-85 with $8.0 million planned for 1985-86. The project should be completed by September 1986.

9. Dash 8 Aircraft

This project will acquire six De Havilland of Canada Dash 8 aircraft. Four of the new aircraft will replace four CC130 Hercules transport aircraft which are currently employed as navigation trainers and which will now be returned to the strategic and tactical transport role. The assignment of the other two Dash 8 aircraft to Canadian Forces Europe will provide a longer range, faster and more fuel efficient aircraft to carry out the European air transport role.

The project was approved by the Treasury Board on 31 Aug 84 at a total cost of $98.1 million in Capital funds. It will extend over a period of four years starting in 1984-85 and expenditures of $59.2 million are anticipated during 1985-86.

E. Relationship of Management Structure to the Program Activity Structure

As indicated in the Preface, the financial data displayed in Section II of the Plan is based on a distribution of expenditures made through a centralized management structure using a costed program base. This distribution assigns actual costs over the various activities regardless of the expenditures incurred by individual budget managers. Resources are not managed through the functional activity structure detailed in this Expenditure Plan.

Financial control of the Defence budget is achieved through a system of modified management accounts derived from the Program Activity structure but more directly related to the operational command structure which has been adopted to provide the Department with the ability to quickly respond to emergency situations. The Armed Forces operational command and control structure reflects capabilities established to respond to current tasks that include being prepared for a variety of emergency situations which could arise within the Department's Objectives/Sub-Objectives (see page 9). These unique and sometimes conflicting requirements can best be met by a compromise management arrangement of centralized and decentralized financial control budget elements which recognize factors such as:

- to achieve the most efficient and effective employment of specialized personnel, in training or an emergency situation, establishments and manning activities are controlled centrally which requires the maintenance of central pay accounts for both military and civilian personnel;

- as large quantities of the material required for military operations are available from very limited commercial or foreign sources, controlled central procurement has been found the most economical and effective; and

- centralized supply and repair functions have been adopted to reduce the logistic support base and relieve operational commanders of unnecessary administrative loads.

Figure 29 provides a display of the management structure that has evolved to meet these special defence requirements and its relationship to the functional activity structure derived from the Department's objectives.

Figure 29: 1985-86 Resources by Organization/Activity ($000)

Management Structure/ Activities	Commander or Group Principal	ADM(Materiel) Materiel Support	ADM(Personnel) Pay Allowances & Pensions	ADM(Finance) Revenue	Total
Expenditures by Spending Authority

F. Reserve Forces

1. Role

To enhance the deterrence capability of the Regular Force and to support it in ongoing peace-time tasks and activities.

2. Description

The Reserve Forces are a component of the Canadian Armed Forces and consist of officers and men who are enrolled for other than continuing full-time military service. The sub-components of the Reserve Forces are:

- the Primary Reserve;
- the Supplementary Reserve;
- the Cadet Instructors List; and
- the Canadian Rangers.

The Primary Reserve consists of those officers and men who have undertaken to perform such duty and training as may be required of them. All formed units of the Reserve Forces are composed of members of the Primary Reserve. The elements of the Primary Reserve are the Naval Reserve, Militia, Air Reserve, and Communication Reserve. In addition to the foregoing, certain officers and men of the Primary Reserve do not serve in formed units. They are individuals who are assigned specialized tasks that are not readily identifiable with a formed unit. These personnel are accounted for on the Primary Reserve List.

The Supplementary Reserve consists of officers and men who, except when on active service, are not required to perform duty or training. The Supplementary Reserve provides a pool of personnel who are unpaid but have had previous military training and could be re-called to service in an emergency. Plans are now being formulated to make service in this sub-component more attractive.

The Cadet Instructors List consists of commissioned officers who may be required to undergo annual training and whose primary duty is the supervision, administration and training of cadets.

The Canadian Rangers consists of officers and men who volunteer to hold themselves in readiness for service but are not required to undergo annual training. Their role is to provide a military force in sparsely settled, northern, coastal and isolated areas of Canada which cannot conveniently or economically be covered by other elements of the Canadian Forces.

3. Elements of the Primary Reserve

The Primary Reserve consists of the following elements which are located across Canada:

- the Naval Reserve has a funded level of 3,250 personnel and is under the command of the Commander, Maritime Command in Quebec City. There are 18 Divisions across Canada;

- the Militia is organized in five areas which are subdivided into 22 districts. The Militia funded level is 15,500 all ranks serving in 117 major and 14 minor units. It is commanded by the Commander, Mobile Command;

- the Air Reserve Group, with a strength of 950 with its headquarters in Winnipeg, has two reserve wings located at Montreal and Toronto. These wings are comprised of two squadrons each. A further three independent squadrons are located at Winnipeg, Edmonton and Summerside and there are nine Air Reserve Augmentation Flights located on Air Command bases throughout the country. The Air Reserve is commanded by the Commander Air Command;

- the Communication Reserve consists of 1,560 communications Reservists serving in 21 units in communities from Victoria, British Columbia to St John's, Newfoundland, and is commanded by the Commander, Communications Command; and

- approximately 100 Reservists are employed at National Defence Headquarters for various administrative functions.

4. Training Program

Training for the Primary Reserve role and missions takes many forms. Reservists attend local unit-conducted classes and Regular Forces courses, participate in practical on-the-job training with Regular Force and Reserve Force units and collective training which includes summer training concentrations for the Militia, on-the-job training in war vessels, operational flying missions and exercises involving field and strategic communications;

The Department's current emphasis remains to upgrade the military effectiveness of the Reserve Forces through such measures as provision of adequate funding for training person-days, revision of training standards, provision of training aids, equipment and clothing. Modest amounts of new equipment has been procured in recent years and approximately 40% of the Readiness and Substainability Funds will be devoted to the Primary Reserve in the future.

In addition to the move of the Naval Reserve Headquarters to Quebec City, a further three Naval Reserve Divisions are being planned for Quebec in the 1984-1987 time frame. Locations are yet to be decided.

A Reserve Force Development Plan is now being prepared so that the true contribution to the required total Force can be defined and costed. It is anticipated that this document will advocate greater reliance on the Reserve Forces than has been the case since the beginning of the Second World War.

5. Resource Summary

The Reserve Forces will account for some 4% of the total Defence Services Program, with 40% for operating costs, 16% for support costs, 29% for assigned costs, and 15% for capital. The major categories of Reserve Forces total expenditures are displayed in Figure 30. The expenditures identified here are included in the appropriate activities covered in Section 11 of the Plan.

Figure 30: Total Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating Costs	**144,605**	138,009	130,752
Support Costs	**56,776**	53,909	53,119
Assigned Costs	**102,716**	97,172	91,001
Capital	**54,621**	71,766	50,096
Total	**358,718**	360,856	324,968

Operating Costs are the funds allocated to the Reserve Forces organizations for military and civilian pay and miscellaneous operating costs which are within their direct control, plus equipment operating costs borne by various Regular Forces support units.

Support Costs include Regular Forces Support Staff costs, aircraft flights dedicated to Reserve Forces activities and the salaries of Regular Forces instructors.

Assigned Costs cover maintenance of facilities and other centralized logistic expenditures which are essential to Reserve Forces activities but also benefit Regular Forces functions.

Figures 31 to 35 provide the details of expenditures for each of the various elements of the Reserve Forces.

Assigned Costs	812	768	336
Total	2,757	2,635	1,622

6. National Search and Rescue Program

1. The Concept

The federal government takes the lead in Search and Rescue in Canada, chiefly through the Department of National Defence and the Department of Transport. The various departmental Search and Rescue activities of National Defence, Transport, Fisheries and other departments, are structured into a rational and well coordinated program, national in character, centered around a unified federal operation. The Minister of National Defence is identified as the Lead Minister for Search and Rescue and spokesman for the government on Search and Rescue matters.

2. The Program

Definition: Search and Rescue comprises the search for and the provision of aid to persons, ships or other craft which are, or are feared to be, in distress or imminent danger.

The Federal Role: The federal role is to provide - with the assistance of other levels of government - the private sector and volunteer agencies, search and rescue services in response to marine or air incidents within the area for which Canada has accepted responsibility.

Program Scope: The government's responsibilities for Search and Rescue will be discharged through the development of a National Search and Rescue Program with roles for federal, provincial and local authorities within their defined areas of jurisdiction, and participation by the private sector and members of the public in program development, coordination and execution in accordance with Search and Rescue system response time and survival standards made known to the public.

Program Objectives: The objective of the National Search and Rescue Program is to prevent loss of life and injury, first through search and rescue alerting, responding and aiding activities which use public and private resources, including where possible and directly related thereto, reasonable efforts to minimize damage to or loss of property, and second by ensuring appropriate priority to aviation and marine safety and prevention measures focussed on owners and operators most commonly involved in Search and Rescue incidents.

3. Program Structure

Management: The focus of Search and Rescue management is the Interdepartmental Committee for Search and Rescue chaired by a General officer from National Defence and having a Vice-Chairman from the Department of Transport. The structure establishes a line of responsibility for policy-making, planning, programming, monitoring and review of Search and Rescue from the Lead Minister through the Chairman Interdepartmental Committee for Search and Rescue to the line departments. The management process provides for the line departments to propose what should be done,

and for the Lead Minister, on the advice of the Chairman Interdepartmental Committee for Search and Rescue, to make program recommendations to the Cabinet. The Chairman Interdepartmental Committee for Search and Rescue is supported by a permanent full-time Secretariat. The line departments which constitute the Interdepartmental Committee for Search and Resuce retain full control of Search and Rescue operations and execute the Search and Rescue program.

Prevention: Department of Transport Air Transportation Administration has primary responsibility for the provision of air Search and Rescue prevention programs through education, regulation and enforcement under authority of the Aeronautics Act. This responsibility is executed in close consultation with the Department of National Defence Search and Rescue operational authorities, to optimize program priorities and effectiveness. Coordination is effected through the Interdepartmental Committee for Search and Rescue and the Interdepartmental Committee for Search and Rescue Secretariat.

Department of Transport Canadian Coast Guard has primary responsibility for the provision of marine Search and Rescue prevention programs through education, regulation, and enforcement under authority of the Canada Shipping Act and other legislation which reflects the international responsibilities established under conventions such as Safety of Life at Sea.

Operations: The Canadian Forces have the responsibility of coordinating all air and Federal marine search and rescue operations in Canada and the surrounding ocean areas. There are four Rescue Coordination Centres established to coordinate the response to distress situations. These centres are located in Halifax, Nova Scotia; Trenton, Ontario; Edmonton, Alberta; and Victoria, British Columbia. The Rescue Coordination Centres come under the control of the respective Search and Rescue Region Commanders, and are manned by Canadian Forces personnel with Coast Guard officers in all centres except Edmonton. The Canadian Coast Guard has also established Marine Rescue Sub-Centres at St. John's, Newfoundland and Quebec City to work with the Rescue Coordination Centres in the resolution of marine distress incidents in their respective areas. The Rescue Coordination Centres have at their disposal dedicated Search and Rescue resources, which includes specially equipped Canadian Forces fixed wing aircraft and helicopters, Canadian Coast Guard surface vessels and hovercraft. As well, there are non-dedicated resources that can be tasked by the Centres. These include aircraft and ships of the Canadian Forces, Coast Guard vessels, vessels of the Department of Fisheries and Oceans, civil volunteers and ships of opportunity. The Royal Canadian Mounted Police, the Department of Indian and Northern Affairs and the Department of Energy, Mines and Resources also assist in Search and Rescue Operations when it is feasible for them to do so.

Search and Rescue Resources: Primary responsibility for the provision of air resources to respond to Search and Rescue incidents rests with the Department of National Defence. Primary responsibility for the provision of marine resources for Search and Rescue response rests with the Department of Transport/Canadian Coast Guard.

4. Search and Rescue Incidents

During 1983, there was a total of 11,587 incidents coordinated by the four Rescue Coordination Centres. These included 2,735 air, 8,103 marine, 535 humanitarian and 214 civil aid cases. A total of 9,461 flying hours were accumulated in response to all incidents. Primary and secondary aircraft flew 7,229 hours (76% of the total), while other government agencies and civilian aircraft flew 2,232 hours (24% of the total).

There were a total of 2,005 Emergency Locator Transmitter/Emergency Position Indicating Radio Beacon alarms, only 27 of which proved to be real cases. Primary search and rescue aircraft flew 774 hours tracing false Emergency Locator Transmitter/Emergency Position Indicating Radio Beacon alarms. It must be noted that any one of the 27 actual cases, were there no Emergency Locator Transmitter on board, could have resulted in a search far exceeding the 774 hours spent on false alarms.

In the first six months of 1984 the Rescue Coordination Centres handled a total of 2,412 incidents. There were 508 air, 1,655 marine, 191 humanitarian and 58 civil aid cases. Primary and secondary search and rescue aircraft flew 387 hours with other government aircraft flying an additional 920 hours. There have been 277 Emergency Locator Transmitter/ Emergency Position Indicating Radio Beacon alerts, 25 of which were actual cases.

5. Equipment Update Programs

As a result of a 1976 government directive to improve search and rescue capabilities in the two coastal search and rescue regions, 11 of the 14 Labrador/Voyageur helicopters were modified through the Search and Rescue Helicopter Capability Update Program. A Search and Rescue Helicopter Posture Study, undertaken in 1980, concluded that search and rescue capabilities in the Trenton region should be similar to those of the two coastal regions; consequently the three remaining Voyageurs slated for Trenton will now also receive the full Search and Rescue Helicopter Capability Update modifications. A small portion of the $20.8M program is funded from the Government Special Recovery Capital Projects program.

6. Search and Rescue Satellite-Aided Tracking Program

On 22 September 1977, government agreed that Canada should seek a significant improvement in its search and rescue capability by participating in an experimental international Search and Rescue Satellite Program using meteorological satellites. Other participants in the Program are the United States of America, France, and the Union of Soviet Socialist Republics. In May 1980, the Search and Rescue Satellite Program parties accepted in principle the participation of Norway as an Investigator and negotiations were opened in November 1981 with United Kingdom representatives with a view to their government's eventual participation as an Investigator. Because of the high international visibility, Treasury Board has designated the Search and Rescue Satellite program a major crown project.

The first Union of Soviet Socialist Republics satellite (COSPAS 1) was launched in June 1982 and the second on 25 March 1983. The first United States satellite (NOAA-E) was launched on 28 March 1983. The 15-month international Demonstration and Evaluation commenced 1 February 1983. Since that time, other nations including Bulgaria, Finland, Sweden, and Norway have joined the program as Investigators.

In order to insure continuity of service the program has now progressed to the interim operational phase and until such time as a fully operational international system is available, the participating nations have agreed to sponsor additional Search and Rescue Satellite equipped satellites which are predicted to remain in service until at least 1990. Canada's contribution is being sponsored under the Government's Special Recovery Capital Projects Program. Under the same program, Canada is expanding its ground segment to provide full territorial coverage.

7. Civil Air Search and Rescue Association

Canadian Forces' dedicated search and rescue aircraft cannot by themselves cover the country's immense area. For this reason, secondary resources from both the federal government and the civil sector are used in the resolution of distress incidents. On a regional basis, and with significant variation in capabilities, availability, training, resources and coordination, civilian volunteer groups have added significantly to the efficiency of the Federal Search and Rescue program and have helped reduce costs to the taxpayers. With a view to expanding and optimizing this civil assistance to search and rescue, the Department of National Defence and Transport Canada are developing the concept of a nation-wide civil air search and rescue association. A joint Department of National Defence/Transport Canada/ Canadian Air Transport Administration study has determined the mechanics of forming the organization. Departmental approval for the formation of the organization has been granted and Treasury Board approval is now being sought for funding to implement the program.

H. Emergency Planning Canada

1. Role

Emergency Planning Canada is responsible for co-ordinating the planning of the federal response to emergencies, whether in peacetime or wartime, and for encouraging emergency planning in Canada.

2. Description

Emergency Planning Canada consists of a headquarters in Ottawa which is comprised of two groups, Plans and Operations.

The Planning Group consists of a number of planning coordinators who cooperate with federal departments, agencies and crown corporations in the conduct of their responsibilities for emergency planning and the testing of those plans. The Planning Group provides training and education on emergency planning matters through formal courses at Arnprior, Ontario.

Under the Operations Group there are 11 Regional Directors who ensure liaison with federal agencies in their regions. These Regional Directors play an important role in coordinating federal emergency planning with that of the provinces, and through the provinces, that of municipalities. In addition, the Operations Group has a Public Information Division and an Administration Division.

In addition to coordinating federal emergency planning, Emergency Planning Canada encourages Canadians to plan for emergencies through such activities as providing funds to the provinces for certain approved emergency planning projects; sponsoring and giving courses and conferences on emergency planning for representatives of the public and private sectors; sponsoring research into various aspects of emergencies and providing public information and advertising on emergency planning matters. A further function of Emergency Planning Canada is its responsibility for planning for continuity of government in time of national emergency, coordination of emergency planning activities with agencies of the United States of America and the North Atlantic Treaty Organization, and administering post-disaster financial assistance to provinces on behalf of the Canadian Government.

3. Resource Summary

Resources provided for employment by Emergency Planning Canada consist of operating costs as well as grants for emergency planning research, and contributions to provinces for approved emergency planning projects. Figure 36 displays these costs which are included in the Policy Direction and Management Services activity.

Figure 36: Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Contributions	6,338		6,237		3,071	
Total Requirements	14,139	83	14,357	80	8,779	79

I. Readiness and Sustainability

1. Purpose

In 1982, the Cabinet Committee on Foreign and Defence Policy agreed that the Department required the capability to:

- meet and fully sustain commitments in emergencies; and
- expand capabilities if directed.

The Department has established, within the defence envelope, a Readiness and Sustainability program to redress specific readiness and sustainability shortfalls. To fund the Readiness and Sustainability program, annual increments of .25% of the defence budget are being added to the defence envelope. The first .25% increment was added to the defence envelope in 1984-85 and the government also has made provision for further increases of .25% of the defence budget for 1985-86 and 1986-87. The value of the Readiness and Sustainability program for the period 1984-85 to 1986-87 based on the .25% funding increments provided at the time of program approval are as follows:

- 1984-85 $ 20M
- 1985-86 $ 63M
- 1986-87 $133M

2. Description

Policy Directives and long range plans are now in place to provide the framework for determining Readiness and Sustainability projects and priorities.

3. Resource Summary

There are a number of projects currently under consideration. However, these had not received final approval at the time the 1985-86 Estimates were prepared and so are not identified individually in these Estimates. It is planned to expend funds during 1985-86 on the following types of projects: acquisition of submarine torpedoes; purchase of water purification equipment and miscellaneous tools for Militia Engineer units, purchase of portable military computers for militia artillery units and first spending on the forming of a Reserve Electronic Warfare Squadron; additions to personal protective equipment and night vision devices; and, improvements to communication capabilities.

J. Military and Strategic Studies

1. Objective

The primary objective of the Military and Strategic Studies Program is to develop a domestic competence and national interest in military and strategic issues of current and future relevance to our national security by:

- encouraging research and teaching programs at Canadian Universities;
- providing fellowships and scholarships to a number of Canadian graduate students; and
- promoting an informed discussion of related matters among interested Canadians.

2. Description

The Military and Strategic Studies Program was instituted by government decision in September 1967. Since then, approval has been granted on request for five-year renewals of the program. The current five-year period, running to 1985-86 was approved by the Treasury Board in September 1980.

There are eight universities, geographically located in all regions of Canada, which receive one of two types of grants under the Military and Strategic Studies Program:

- research centre grants go to five universities (University of British Columbia, University of Calgary, Dalhousie University, Université Laval, Queen's University). In addition to the operation of a Research Centre, many of these universities also offer courses related to military and strategic studies; and
- undergraduate teaching grants go to three universities (Acadia University, University of New Brunswick, York University) to offer courses in fields related to military and strategic studies.

Fellowships and scholarships are awarded to Canadian students with outstanding academic potential who want to pursue further studies in a field of military or strategic relevance. The Association of Universities and Colleges of Canada generally administers the application process on behalf of the Department of National Defence.

3. Resource Summary

Funds for the program in 1985-86 amount to $663,500 which represents a 7.8 percent increase over the 1984-85 funding of $615,700.

National Energy Board

1985–86 Estimates

Part III

Expenditure Plan

2699

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

National Energy Board

2703

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates and Extracts from Volume II of Public Accounts in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $24,364,000 in support of the National Energy Board. The remaining expenditures, estimated at $2,685,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements By Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	National Energy Board		
65	Program Expenditures	24,364	22,881
(S)	Contribution to employee benefit plans	2,685	2,380
	Total Program	27,049	25,261

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Board anticipates that in 1985-86:

- There will continue to be uncertainty with respect to energy export markets, especially in the U.S.A. for natural gas and electricity. The Board policy will be to continue to process and decide all applications expeditiously, fairly, and without undue burden on industry, consumers, and interested parties such as provincial governments.

- There will be greater complexity of analyses required to deal with projects relating to new sources of supply from Canadian frontier areas including Sable Island, Hibernia, High Arctic Islands, Mackenzie Delta, and Beaufort Sea. There are no Canadian precedents for guidance to the Board relating to these developments. New production and transportation techniques must be devised by industry and analysed in the approval process. Environmental implications will require careful consideration. The Board must keep abreast of frontier developments and have the expertise ready to deal with applications in an expeditious and fair manner.

- Electricity export applications from the Maritimes, Quebec, Manitoba, Alberta, and British Columbia will receive consideration. They will involve both nuclear and fossil fuel sources and some will require new transmission facilities which will require detailed technical, economic and environmental analyses to ensure that they are in the best interests of Canada.

- In general terms, the Board anticipates its regulatory workload to continue at a level comparable to or slightly in excess of 1984-85 and 1983-84. Figure 4 on page 20 provides a forecast of regulatory workload by major type.

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Energy Regulation and Advice	27,049	24,390	2,659
Person-Years	466	449	17

Explanation of Change: The increase of 17 person-years and $2,659,000 is due to a number of contributing factors including underutilization of 1984-85 authorized budget, largely due to various government restraint measures imposed during the year; additional requirement for person-years to meet responsibilities related to the regulation of the Northern Canada Power Commission; increased workload associated with the extention of the Oil Export Charge to oil products from Eastern Canada; improved capacity to evaluate the performance of enhanced recovery projects and upgrading the Boards telecommunications, EDP and word processing facilities.

Explanation of Forecast: It is estimated that the Board will lapse approximately $871,000 of its 1984-85 Main Estimates. The major reason for this lapse relates to government restraint measures imposed during the fiscal year on staffing and discretionary spending.

B. Recent Performance

1. Highlights

Highlights of the Major Developments during 1984-85 are:

- In September 1984, the Board issued an updated forecast of Canadian energy supply and demand to the year 2005. This was the result of consultations with provincial governments, industry, major energy consumers and public interest groups representing a broad cross-section of the energy community. The updating process commenced in the fall of 1983 and involved the review and analysis of some 65 written submissions.

- The Board at the request of the Ministers of Indian and Northern Affairs Canada and Energy, Mines and Resources will hold a public inquiry on the rates charged by the Northern Canada Power Commission for electricity sold in the Yukon and Northwest Territories. Public hearings are to be held in Whitehorse and Yellowknife commencing in January 1985. As a result, the Board will provide advice on the rates which may be charged by this crown corporation for the twelve-month period starting April 1, 1985.

- A recent change in government policy on the export price for natural gas has caused a flurry of activity. Exporters have the option of negotiating prices that will be subject to approval of the Board and the Government. There has been and will continue to be increased workload due to licence-holders applying to amend pricing conditions in existing licences and orders, and to request new licences or orders.

Highlights of the Program Performance during 1983-84 are:

- The Board held 15 hearings lasting 146 days at 18 different locations across Canada. Five of the hearings related to electric power exports and one concerned potential export of liquefied natural gas (LNG) to Japan.

- In addition to its normal responsibilities, the Board, at the request of the Minister of Indian and Northern Affairs Canada, was asked by the Minister of Energy, Mines and Resources to inquire into and provide advice on Northern Canada Power Commission rates. Following public hearings in the summer of 1983, a report was released in October of that year containing major recommendations on the method of rate regulation of the utility.

- The Board undertook a major revision of its Rules of Practice and Procedure with a view to standardizing and simplifying basic procedural requirements. Other regulatory reform initiatives were also started. These will continue in the foreseeable future.

- In September 1983, the Board commenced the issue of a series of information bulletins in order that the public and other interested parties would be better informed on its activities and procedures.

2. Review of 1983-84 Financial Performance

Figure 2: Financial Requirements by Activity ($000)

	1983-84		
	Actual	Main Estimates	Change
Energy Regulation and Advice	22,719	25,234	(2,515)
Person-Years	460	462	(2)

Explanation of Change: The difference between actual expenditures and Estimates results mainly from the following major items:

- The number of public hearings held outside of the headquarters area was substantially less than originally estimated.
- A salary lapse of $1.5 million was attributed to under-utilization of person-years, reduced overtime expenditures and severance pay benefits.

C. Background

1. Introduction

The National Energy Board was established in June 1959 under the National Energy Board Act. The Board is designated as a department within the meaning and purpose of the Financial Administration Act and reports to Parliament through the Minister of Energy, Mines and Resources.

The Board has two principal responsibilities: to regulate specific areas of the oil, gas and electrical utility industries in the public interest, and to advise the government on the development and use of energy resources.

The Board, on its own initiative, may hold inquiries into a particular aspect of the energy situation and prepare reports for the information of the government, of Parliament and of the general public.

The Board also carries out studies and prepares reports at the request of the Minister of Energy, Mines and Resources.

2. Legal Mandate

The main functions of the Board are set forth in the National Energy Board (NEB) Act as amended, the Energy Administration Act (EAA) (formerly the Petroleum Administration Act), and the Northern Pipeline Act (NPA).

3. Program Objective

To ensure that the best interests of Canada are served in the construction and operation of oil and gas pipelines and power lines subject to federal jurisdiction, in the exportation and importation of gas, in the exportation of electrical power, and in the exportation and importation of oil. To ensure the safe and environmentally sound construction and operation of power lines and of oil and gas pipelines subject to federal jurisdiction.

To advise on the control, supervision, conservation, use, marketing, and development of energy and sources of energy.

4. Program Description

Functions: The National Energy Board functions as a quasi-judicial tribunal. It serves as a regulatory enforcement body responsible for the oversight of construction and operation of approved energy projects, and it acts as an administrator of certain programs on behalf of the federal government. The Board regulates the tolls and tariffs of pipeline companies under federal jurisdiction to ensure that the tolls are just and reasonable and not discriminatory. It also serves as a source of advice to the government on specific policy questions and periodically undertakes studies of various energy issues both on its own initiative and at the request of the responsible Minister.

Advisory: The advisory function of the Board enables it to hold inquiries on its own initiative into particular aspects of the energy situation and prepare reports for the information of government, Parliament and the general public. The Board also carries out studies and prepares reports at the request of the Minister (Part II NEB Act).

Regulatory: The major regulatory responsibilities of the Board, in summary form, are:

- Granting certificates to construct and operate interprovincial and international oil and gas and petroleum products pipelines and international power lines and designated interprovincial power lines. Before permission is granted for construction through a certificate of public convenience and necessity, the Board considers the application at a public hearing. The Board may, however, by order (without a public hearing) authorize new pipelines, additions or modifications to existing pipeline systems where such additions are not more than 40 kilometres in length. It may also authorize, by order, international power lines with operating voltages not exceeding 50 kv (Part III NEB Act).

- Monitoring the construction and operation of all pipelines and power lines under its jurisdiction to ensure a high level of public safety is maintained and adequate measures are taken to protect the environment. In this respect, the Board carries out inspection programs, investigates and reviews pipeline system performance, and issues orders authorizing pipeline utility crossings (e.g., where a pipeline crosses or is crossed by another utility) only after all relevant information has been considered (Part III NEB Act).

- Licensing the export of natural gas and gas products, oil and oil products, and electricity. Prior to issuing export licences, the Board must satisfy itself, among other things, that the quantities of energy involved do not exceed the surplus remaining after allowance has been made for reasonably foreseeable Canadian requirements (Part VI NEB Act and Part III EAA).

- Regulating the rates, tolls and tariffs of pipeline companies under federal jurisdiction to ensure they are just and reasonable and to ensure that there is no unjust discrimination against any person or locality. The rates, tolls or tariffs allowed reflect, among other things, the capital and operating costs of the pipeline company and the necessity for it to earn an adequate return on its investment. Applications for major changes to rates, tolls or tariffs are examined at public hearings (Part IV NEB Act and Part II NPA).

- Regulating the price of natural gas in interprovincial and export trade on behalf of the Minister (Part III EAA).

Administration of Other Programs: The Board administers, enforces and collects petroleum export charges from exporters on behalf of the Minister (Part I EAA).

Procedures: The National Energy Board is a court of record, and with regard to attendance, the swearing and examination of witnesses, the production and inspection of documents, and the enforcement of its orders, it has all the powers vested in a superior court of record.

The Board consists of eleven members. The NEB Act also provides authority for the Governor in Council to appoint up to six temporary members. Most hearings are conducted by three members, with one acting as presiding member. At times, one member may conduct a hearing and either make the decision on his or her own or prepare a report for adoption by the Board.

All applications for certificates of public convenience and necessity, except where exempted (e.g., pipelines of 40 kilometres or less), for long-term licences for export of crude oil, oil products, electricity and natural gas, and applications for major changes in rates, tolls and tariffs are subject to public hearing. Proceedings before the Board are initiated by filing, with the Secretary of the Board, an application in writing. Following public notice, any person intending to oppose or intervene in any application must file a written statement together with supporting documentation.

Hearings before the Board are normally held in Ottawa, but are held in such other places in Canada as the Board deems necessary or desirable in the public interest.

The Board assigns much of its ongoing regulatory workload to five standing Panels each composed of a quorum of three Board Members. In exercising their powers and duties as described below, the Panels refer to the whole Board any matters which, in the Panel's view, raise questions of general policy, involve substantial expenditures on the part of regulated companies, require consideration as to the desirability of a public hearing or otherwise raise issues considered by the Panel to be of importance to the Board as a whole. The Panels are:

- Electrical Panel, which deals with all matters relating to electricity, excluding the issuance of certificates of public convenience and necessity and those matters requiring a public hearing;

- Financial Regulatory Panel, which exercises the power of the Board with respect to tolls and tariffs under Part IV of the NEB Act and Part II of the NPA on matters relating to gas and oil pipeline companies under the Board's jurisdiction;

- Gas Panel, which exercises the power of the Board under Part VI of the NEB Act and Part III of the EAA in respect of all matters dealing with natural gas, propane, butanes, liquefied natural gas, synthetic natural gas, ethane and other related matters;

- Oil Panel, which exercises the power of the Board under Part I of the EAA pertaining to the export charge on crude oil and oil products. The Panel issues licences for the export of oil and oil products for a period of up to one year, oversees the interprovincial movement and allocation of western Canadian crude oil and advises the Minister respecting oil-related energy matters; and

- Pipeline Panel, which exercises the power of the Board in matters relating to construction, operation and maintenance of oil and gas pipelines, such as safety and environmental factors, monitoring and enforcing of terms and conditions of certificates and granting of leave to open.

When the Board is prepared to grant a certificate for a pipeline or power line, or to issue a licence for the export of gas or, with certain exceptions, the exportation or importation of oil for periods exceeding one year, it makes a submission to the Governor in Council through the Minister of Energy, Mines and Resources. When the Board denies an application, the decision is not subject to referral to the Governor in Council. Licences require the approval of the Governor in Council before they take effect.

The Board's reports on its decisions are issued as public documents.

Decisions regarding rates, tolls and tariffs of pipeline companies, orders authorizing the export of propane and butane for periods up to one year and the export of natural gas for periods up to two years, and oil export licences granted for less that one year, are issued by the Board without reference to the Governor in Council.

2715

5. Program Organization for Delivery

Activity Structure: The National Energy Board program consists of one activity, Energy Regulation and Advice.

Organization Structure: The organization structure and resources of the National Energy Board are shown in Figure 3. The Board is primarily located in Ottawa with a staff of 19 in Calgary. The functional relationships shown in Figure 3 reflect the direct interaction between the Board and its Panels and the staff for regulatory matters and energy studies. In 1984-85 a new position, Director General, Pipeline Regulation, was created to provide a single senior level focus to and for industry on all pipeline matters.

Figure 3: Organization and Resources ($000)

														Total
Person Years	42	41	53	27	28	20	31	52	13	46	22	48	43	486
Operating Costs	2184	2113	3053	1394	1426	1031	1817	3800	633	2899	1506	2149	2784	27 049

The Board consists of eleven permanent members and a complement of up to six temporary members, all of whom are appointed by the Governor in Council. Permanent Board Members are appointed for a period of seven years; mandatory retirement is at age seventy. There are a chairman, a vice-chairman and three associate vice-chairmen. Board Members function primarily as judges, deciding cases as a result of the public hearing process or making decisions in standing panels, or at formal Board meetings.

The Executive Director is responsible for the day-to-day management of the Board, including the acquisition and allocation of human and financial resources and the ensurance of efficiency and effectiveness in Board activities and operations. The Director of Plans is responsible for efficiency and effectiveness of staff support, for program evaluation and for internal audit matters.

The Director General, Energy Studies, is responsible for ensuring effective coordination and synthesis of all matters relating to energy demand/supply and surplus, conducting major energy studies which are broad in scope and involve a wide range of disciplines (Part II NEB Act), inquiries respecting energy supply, demand and surplus, and integration of information and processing systems and services for the Board.

The Economics Branch is responsible for energy statistics including supply/demand balances for all sources of energy, short-and long-term energy forecasts, analysis of market requirements in respect of applications, and economic analysis of major energy projects and of the energy industries.

The Energy Supply Branch is responsible for advising the Board on matters of oil and gas exploration, drilling production, forecasting trends in oil and gas supply from conventional, oil sands, and synthetic sources, and independently calculating the reserves and deliverability of gas and the reserves and producibility of oil. The office in Calgary, which is part of the Energy Supply Branch, is engaged in the determination of oil and gas reserves and the analysis of reservoir performance on an individual pool basis.

The Systems Development Branch is responsible for computer systems services and data processing support to the Board including consultative services on computer operation, data management, and program design and development. It also provides an advisory service to ensure the availability and introduction of the latest data processing techniques and applications, and the provision of computer hardware and software sufficient for and corresponding to the Board's operational environment.

The Director General Pipeline Regulation serves as the senior contact for all matters relating to pipelines and is responsible for the general management of the Financial Regulatory Branch, the Pipelines Engineering and Operations Branch, and the Environment and Right-of-Way Branch.

The Financial Regulatory Branch has the prime responsibility of advising the Board on rates, tolls and tariffs under Part IV of the NEB Act and Part II of the Northern Pipeline Act, financial advice in relation to Parts II, III, and VI of the NEB Act, and the administration of the collection and audit of petroleum export charges and costs of transportation related to Parts I and III of the EAA. It is also responsible for auditing the accounts of pipeline companies under the Board's jurisdiction and for monitoring the performance of pipelines within the framework of regulatory division.

The Pipelines Engineering and Operations Branch is principally responsible for matters relating to pipeline certificates issued under Part III of the NEB Act and is the principal source of advice to the Board on capital and operating costs, engineering and safety matters pursuant to the Board's responsibilities under Parts II, IV, V, and VI of the NEB Act and under the Northern Pipeline Act in respect of pipelines.

The Environment and Right-of-Way Branch is responsible for the protection of the environment, the local public hearings of detailed routings, and all right-of-way matters relating to the approval, construction and operation of pipelines and international power lines under Part III of the NEB Act.

The Electric Power Branch is responsible for advice to the Board on electric export licensing, international power line certification, and regulatory surveillance. The Branch also prepares supply and demand forecasts for electricity for use in dealing with electrical or other applications, keeps under review the United States market for electricity, and provides advice to the Board on matters relating to the production, transportation, sale and exchange of electricity over which the federal government has jurisdiction.

The Gas Branch is the focal point for all gas and gas product related regulatory activity pursuant to Part VI of the NEB Act and for the monitoring and control of all matters associated with the Board's obligations for the administration of domestic gas pricing under Part III of the EAA. The Branch also plays a supportive role in all regulatory activity with respect to gas and gas products pursuant to Parts II, III, and IV of the NEB Act.

The Oil Branch is responsible for providing advice in the general area of oil-related energy matters including export charges, crude oil and petroleum product export licensing, control of international oil exchanges, allocation of domestic crude oil, the question of oil markets, processing and distribution, the short-term balance of supply and demand for feedstocks and oil products. These are matters within the ambits of Parts I and II of the EAA and Parts II, IV, and VI of the NEB Act.

The Law Branch is responsible for advising the Board on its powers and their legal application to the Canadian energy industries under the Board's jurisdiction, including the possible effect of the application of such powers.

The Office of the Secretary provides administrative control and coordination of all matters brought formally before the Board or Panels of the Board, prepares and maintains custody of agenda, minutes, statutory documents, and other official Board records, receives and issues all communications of the Board, and provides the Board with a public relations service, a library information centre, printing and graphic arts facilities.

Administrative Services are responsible for the coordination and administration of policies and the provision of advice and services in areas of finance, personnel, general administration, official languages, and security.

D. Planning Perspective and Performance Review

1. Environment

Domestic retail and export sales of energy including petroleum and petroleum products, natural gas and electricity totalled $60 billion in 1983, representing approximately 15% of total final sales in the economy.

Several key factors will affect the direction and nature of the National Energy Board in 1985-86.

Economic Climate: The energy sector is undergoing substantial change. Demand patterns are shifting significantly in response to dramatic changes in energy prices and policy initiatives. Supply patterns are also changing as traditional sources of oil and gas are depleted and exploration development activity is increasingly concentrated in frontier areas. The technology is more complex and the costs of developing and transporting the resources are much higher.

Social Climate: As a result of growing experience with major energy projects, particularly those in remote frontier areas, governments, regulatory agencies and the public generally have become increasingly concerned about such matters as socio-economic and environmental impacts, safety considerations and escalating costs.

2. Initiatives

The National Energy Board does not foresee major changes in either the nature or direction of the Program in 1985-86. However, major changes in the national energy policy or in the Board's advisory role could alter the workload of the Board significantly.

3. Program Effectiveness

The Board recognizes that by its very nature, regulation - however necessary - imposes a burden on those being regulated. The Board is undertaking an extensive review of its own regulatory requirements in an effort to reduce the amount of regulation and simplify the procedures involved. The focus of these activities is in keeping with the spirit of the policies on program evaluation and regulatory reform. As part of this process, the Board's Rules of Practice and Procedures have been revised in consultation with industry and other interested parties. The Board has also established a Committee on Regulation of Pipelines which is reviewing a number of policies and procedures relating to pipeline tariffs and construction. Many of the Board's regulations and procedures are under examination jointly with interested parties with a view to reducing the burden of regulation. Small technical groups have been formed with active involvement of industry to provide advice and guidance in the overhaul of rules and regulations. This work will continue in 1985-86.

Recognizing the complexities of the toll-regulating process, the Board felt that it would be desirable to provide a description of its philosophy and approach with respect to the regulation of tolls and tariffs under Part IV of the NEB Act. Accordingly, in March 1984, it published a paper on this subject. In its preparation, the Board provided an opportunity for comment by the oil and gas industry and by other parties who had shown their interest in the subject through intervention in the Board's tolls hearings during the preceding two years. The Board is now inviting comments, through public hearings, on its method of regulating the tolls of two major pipelines.

The Board has experienced some difficulty, in applying to a small regulatory agency, the conceptual framework for program evaluation as developed by the Office of the Comptroller General. It has recently, however, issued a policy on program evaluation adapted to NEB needs and acceptable to the Comptroller General. The Board is now proceeding to implement that policy which calls for the formal evaluation of the various components of the Board's program on a cyclical basis. At the same time, in adapting to changing circumstances, the Board is continuing to use other mechanisms for reviewing various elements of its program and procedures and has taken action to implement improvements. Examples are: the work of its Committee on Regulation of Pipelines; the study of pipeline costs; various regulatory reform

initiatives; and the updating and improvement of the NEB Rules of Practice and Procedures and many of the NEB regulations. Such special reviews coupled with ongoing performance monitoring and formal program evaluations provide the Board with a good basis for monitoring the efficiency and effectiveness of its performance.

4. Performance Information/Resource Justification

The National Energy Board's responsibilities can be divided into three major functions: regulatory, advisory, and administration of other programs. The Board operates on a matrix basis. Interdisciplinary and interbranch groups are set up to provide effective advice to the Board Members on regulatory and other matters.

Regulatory: The regulatory function representing approximately 80% of the Board's workload, can be divided into six major fields. A line branch has primary responsibility for each field and is responsible for coordinating any matters brought before the Board and its Panel. Interdisciplinary and interbranch groups are set up in order to provide effective advice to Board Members. The regulatory function also includes the maintenance of various economic models and statistical data bases to ensure appropriate analysis can be carried out. Figure 4, page 20, provides details of the expected regulatory workload.

Figure 4: Regulatory Workload

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Pipeline Certificates			
Certificates of Public Convenience & Necessity Applications	5	5	5
Certificates Granted	*	*	-
Additions or Modifications to Existing Pipelines			
Applications	55	50	52
Orders Issued	55	50	52

Gas and Products			
Applications for Export Licences and Orders	260	250	243
No. of Public Hearings	4	4	-
Electricity			
Certificate of Public Convenience and Necessity Applications (International Power Lines)	3	2	1
No. of Public Hearings	3	3	-
Certificates Granted	*	*	-
Applications for Export Licences	4	4	7
No. Of Public Hearings	9	9	3
Detailed Route Hearings Application	2	2	-
No. of Public Hearings	2	2	-
Exemption and Export Orders	9	9	3

*The National Energy Board cannot estimate which certificates will be granted.

It is estimated that the six line branches primarily responsible for the regulatory function will utilize 211 person-years and $11.2 million in 1985-86. This compares with a forecast for 1984-85 of 193 person-years and $10.1 million. The operating increases consist mainly of an allowance for inflation and anticipated increases in consulting and travel related to audits and inspections of pipeline construction.

The three branches responsible for the necessary economic models and statistical data bases used in the regulatory process, Economics, Energy Supply and Systems Development, will utilize an estimated 113 person-years and $6,719,000 in 1985-86. This represents a increase of seven person-years over 1984-85 forecasts and an increase of $724,000 in operating costs.

Advisory: The Board's regulatory responsibilities require it to be informed on a wide range of energy matters within and outside Canada, and to make recommendations to government on any issues that come under the Board's direct legislative responsibility or on which it has been requested to provide advice. In addition to the Board's continuing studies and reports on energy related matters, the NEB Act also makes provision for the initiation of specific studies, inquiries and reports at the request of the Minister.

During the fiscal year 1984-85, Board staff carried out a study of Canadian energy supply and demand to 2005. This major activity included the analysis and comparison of 65 submissions from energy companies, associations, provincial governments and interest groups. The report, released in September 1984, provides guidelines to the Board for the next few years on energy requirements and surplus energy available for export.

The Board will continue to monitor closely developments in the oil and gas producing industry to ensure that it is at all times fully aware of circumstances affecting short-and-long term supply and, therefore, can effectively advise in these areas. The Board will also continue to provide advice on a monthly basis to the Minister on oil and gas pricing matters. Also, it plans to carry out major studies on strategies related to long-term gas export pricing. During 1983, the Board used its powers of public inquiry at the request of the Minister of Indian and Northern Affairs to the Minister of Energy, Mines and Resources to provide advice on rate matters pertaining to the Northern Canada Power Commission. A further inquiry is expected to be held during the first quarter of 1985.

Administration of Other Programs: Under the provisions of the Energy Administration Act (EAA) and regulations, the Board collects and distributes various export charges. This function consumes approximately nine person-years and $400,000. Figure 5 presents the funds collected in past years.

Figure 5: Administration of EAA

	1984-85*	1983-84
	$	$
Transportation Fuel Compensation Recovery Charges		
Aviation [1]	(242,904)	(2,485,537)
Marine [2]	(25,144)	4,771,567
Crude Oil [3]	257,004,802	263,019,737
Oil Products	79,991,917	81,043,673
Total Export Charges Collected	336,728,671	346,349,440

* as at October 31, 1984

1 The Transportation Fuel Compensation Recovery Charge Program on aviation fuel ceased January 31, 1982 and refund of the charges was effected.

2 The Transportation Fuel Compensation Recovery Charge Program on marine fuel ceased May 1, 1983.

3 This figure represents the gross revenue collected on crude oil exports. Under Section 17.1(1)b of the Energy Administration Act, 50% of all such revenue is payable to producing provinces. The actual net revenue realized by the federal government was $131,509,900 in 1983-84 and is $128,502,400 to October 31, 1984.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

National Energy Board expenditures by object are presented in Figure 6.

Figure 6: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	19,180	17,761	16,827
Contributions to employee benefit plans	2,685	2,380	2,658
	21,865	20,141	19,485

Capital	510	190	300
Total expenditures	27,049	24,390	22,719

2725

2. Personnel Expenditures

The National Energy Board is a labour intensive organization with personnel costs (including statutory contributions to employee benefit plans) constituting over 80% of total operating costs.

Figure 7: Authorized Person-Years and Average Annual Salary Provision by Category

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision

Administrative Support					
Clerical and Regulatory	47	47	46	12,932 - 31,743	21,260
Secretarial, Stenographic, Typing	67	67	65	12,636 - 31,946	22,381
Other	9	9	10		20,351

Note: The person-year columns display the forecast distribution of authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary cost, including allowance for collective agreements, annual increments, promotions and merit pay, divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

The Board's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered when describing the Program on a full cost basis. Figure 8 shows the net cost of the Program after services provided without charge by other departments have been added and after revenues credited to the Consolidated Revenue Fund have been deducted.

Figure 8: Net Cost of Program for the year 1985-86 ($000)

	Main Estimates 1985-86	Add Other Costs	Total Cost	Deduct Revenue	Total Net Cost	Forecast Expenditure 1984-85
National Energy Board	27,049	1,965	29,014	500	28,514	26,368

Other costs represent services provided without charge by other departments. They include $1,610,000 for accommodation provided by Public Works, $42,000 for common services provided by Supplies and Services Canada, and $313,000 provided by Treasury Board in respect of employee benefits that cover the employer's share of insurance premium costs.

Revenue includes costs recovered from pipeline construction companies for the review and approval of design specifications and drawings of facilities, construction surveillance, audit and the preparation of terms and conditions to which the certificate is subject.

1985–86 Estimates

Part III

Expenditure Plan

2729

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

National Film Board

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analysis that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $61,680,000 in support of the National Film Board Program for 1985-86. An additional drawdown of $1,248,000 against the "Accumulated net charge against the Revolving Fund Authority" will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	National Film Board		
65	National Film Board Revolving Fund - Operating Loss	61,680	62,330

Extracts from Volume II of the Public Accounts

Use of Appropriations for 1983-84

	Main Estimates	Total Appropriations	Actual Use
Budgetary	$	$	$
Vote 70 - National Film Board Revolving Fund - Operating loss, capital and the grants listed in the Estimates	58,189,000	58,955,979	**57,828,156**
Statutory* - National Film Board Revolving Fund	250,000	(272,399)	**(272,399)**
Total Program	58,439,000	58,683,580	**57,555,757**

* For statutory items, the figures for total appropriation and actual use are the same amount because of the non-lapsing or continuing nature of the authority.

Section I
Program Overview

A. Plan for 1985-86

1. Highlights

The year 1985-86 marks a new departure for the National Film Board. Drawing its inspiration from its actual experience, from the cultural and social realities facing all Canadians, and from the objectives of the National Film and Video Policy, the Board intends to reorganize and restructure its activities in order to fulfill its role more effectively. The first steps to be undertaken in realizing this new role are reflected below:

- contract in more talented independent filmmakers to work within NFB film production programs, with a goal of attaining 70/30 (independent/NFB filmmakers) ratio at the end of five years (see pages 19 and 29);

- integrate communication and promotion activities with those of production, to assure more effective programming of socially and culturally relevant films which reflect our constituencies (see pages 19 and 29);

- improve market research capability so that we produce a greater number of quality productions which focus on fundamental issues, trends and concerns of importance to Canada and the world at a projected cost of $400,000 (see page 19);

- improve communication with the public by providing increased information on Canadian audio-visual products, establishing audio-visual centres across the country, and using new distribution technologies to provide public access (see pages 20 and 34);

- increase the volume of film production activities by reallocating savings of $2 million from salary reduction and from the transfer of activities to other government departments;

- institute training programs which will emphasize on-the-job training in the arts and crafts of film and video (see pages 20 and 29); and

- reorganize the international distribution activities on a cost recoverable basis by focussing on the marketing and sales of our own productions (see pages 20 and 35).

2. Financial Summary by Activity

Figure 1: Financial Summary of Operations by Activity ($000)

Activity	Estimates 1985-86 Revenue	Estimates 1985-86 Expenses	Estimates 1985-86 Excess Expenses	Forecast 1984-85	Change	For Details See Page
Production	3,000	41,145	38,145	36,453	1,692	25
Distribution	5,050	19,032	13,982	15,613	(1,631)	32
Research and Development	-	1,191	1,191	808	383	36
Executive and Administrative Services	-	8,362	8,362	9,456	(1,094)	39
	8,050	69,730	61,680	62,330	(650)	

Figure 2: Reconciliation of Loss to Net Modified Cash Requirements ($000)

	Estimates 1985-86	Forecast 1984-85*	Change	For Details See Page
Net Loss for the Year	61,680	62,330	(650)	
Add: Additional charge against the Revolving Fund authority	1,248	200	1,048	
Net Modified Cash Requirements	62,928	62,530	398	
Authorized person-years	789	947	(158)	43
Planned person-years	140	120	20	44

* There has been no change from 1984-85 Main Estimates (Extracts from Part II of the Estimates, page 4).

Explanation of Change: The financial requirements for 1985-86 are $398,000 or .64% over the 1984-85 forecast. Major items accounting for the change include:

	($ million)
• reinstatement in budget of NFB contribution to the Social Development Policy Reserve	1.0
• increase in salaries and capital due to inflation	1.8
• increase in the net book value of fixed assets	1.2
• transfer of resources to other departments resulting from the transfer of activities	(2.0)
• reduction in level of program expenditures	(1.7)

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 are as follows.

- Expenditure of $15.8 million in designated programs resulted in a greater number of films reflecting the institutional priorities and studies on the needs of the public.

- Co-production of fourteen feature films and documentaries with the private sector resulted in assisting the private sector in the economic development of the Canadian film industry and increased exposure of NFB films in theatres and on television. Major co-production projects included: "Le Crime d'Ovide Plouffe", "Le silence c'est le confort", "Bonheur d'Occasion"/ "The Tin Flute", "At the Wheel"/"Prendre la route" and a series of eight films on Canadian short stories.

- Initial steps in establishing an information system on Canadian audiovisual products has led to the introduction of an information and referral system called FORMAT offered in six regional offices.

- In response to public demand and changing technology, NFB introduced its video cassettes to the home video market through private distributors. During the year, 158 titles were placed in distribution through this channel.

- More efficient use of financial and human resources has resulted from the implementation of a new institutional programming process and a new budgetary system together with the initiation of a staff reduction plan. Actual person-years utilized in 1983-84 were 94 less than the 1,166 person-years planned, due to the initiation of the staff reduction plan.

Major changes to the Program's plans for 1984-85 are as follows.

- Pursuant to the National Film and Video policy, a number of significant changes have occurred during the year.

  - From the Production Activity, the operations of the Canadian Government Photo Centre and those of the Stills Photo Division were transferred to the Department of Supply and Services and to the National Museum respectively along with 68 person-years.

  - From the Distribution Activity, the Board transferred its international offices in Los Angeles, New York, London and Paris to Telefilm Canada with 16 person-years and $1,410,000. However, NFB is retaining an international sales and marketing function.

  - From the Administration Activity, the Sponsored Program Administration Division was transferred to the Department of Supply and Services along with 19 person-years. However, $945,000 freed up by this transfer is to remain with the NFB.

- The search for more efficient distribution methods has led to the introduction of a video cassette rental service in our regional distribution offices as well as the introduction, on an experimental basis, of Videostat, a free duplicating service for NFB films.

2. Review of Financial Performance

Figure 3: 1983-84 Financial Performance on a modified cash basis ($000)

	Actual			Main Estimates	
	Total Expenditures	Revenue	Financial Requirements	Financial Requirements	Change
Production	47,888	13,560	34,328	33,645	683
Distribution	20,388	7,067	13,321	14,970	(1,649)
Research and Development	773		773	812	(39)
Executive and Administrative Services	9,406		9,406	8,762	644
	78,455	20,627	57,828	58,189	(361)
Add: Working Capital Required			(272)	250	(522)
Net Modified Cash Requirements			57,556	58,439	(883)
Person-years			1,072	1,166	(94)

Explanation of change: The difference between actual expenditures and the Main Estimates results mainly from the following:

- a two year contribution to the Social Development Policy Reserve for use in support of activities in other government departments ($1,000,000)

- additional funds received in respect of the Federal Summer Employment Opportunities Pro-ram; New Employment Expansion and Development Program; and an increase in personnel costs resulting from early retirement benefits paid to effect the staff reduction $767,000

- a decrease of $272,000 in working capital requirement as opposed to a forecast increase of $250,000 resulting in a net change of ($522,000)

C. Background

1. Introduction

The National Film Board of Canada (NFB) reports to the Minister of Communications. While the National Film Act states that the Minister "shall control and direct" NFB operations, actual practice has always been to maintain an arm's length relationship which allows independent creative development and output.

The activities of the Board focus on the production of films via the English and French Production Divisions, and distribution which covers both national and international markets. Research and development, in terms of policy and technical innovation, are closely linked to these operations.

2. Legal Mandate

The National Film Board functions under the provisions set out in the National Film Act, 1950. Section 9 of the Act states the following:

The Board is established to initiate and provide for the production and distribution of films in the national interest, and in particular:

- to produce, distribute and promote the production and distribution of films designed to interpret Canada to Canadians and to other nations;
- to represent the Government of Canada in its relations with persons engaged in commercial motion picture film activity in connection with motion picture films for the government or any department thereof;
- to engage in research in film activity and to make available the results thereof to persons engaged in the production of films;
- to advise the Governor in Council in connection with film activities; and
- to discharge such other duties relating to film activity as the Governor in Council may direct it to undertake.

The National Film and Video Policy, published by the Minister of Communications in May 1984, revised and reaffirmed the role of the NFB and consequently proposed changes to the National Film Act (see page 18).

3. Program Objective

The objective of the Program is "cultural interpretation and presentation of Canada, as well as service and support to departments and agencies of the government, through the medium of film". This has been translated into the following principal sub-objectives relating to the Board's activities:

- to produce and distribute films and video productions designed to increase the understanding of Canada and the world;
- to serve as a centre of artistic and technical excellence of an international standard in film and video-production;
- to conduct research and development of film and video techniques and technologies; and
- to foster the artistic and technical skills of Canadians in film and video techniques and technologies.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 4 below, the National Film Board Program is comprised of four activities which contribute to the achievement of the program objectives.

Figure 4: Activity Structure

Organization Structure: The National Film Board consists of the Commissioner who acts as chairman, and eight other members appointed by the Governor in Council, three of whom shall be selected from the Public Service of Canada, and five of whom shall be selected from outside the public service. Each member of the Board, other than the Commissioner, holds office for three years, while the Commissioner is appointed for a five-year period. All members of the Board are eligible for reappointment.

The Commissioner is the Chief Executive Officer of the Board and is charged with the administration of the operations of the Board. The Commissioner reports to the Minister of Communications.

Under the direction of the Commissioner, the program is divided into five main areas of responsibility: English production, French production, Distribution, Technical Research and Services, and Administration.

Each of these areas is headed by a Director. Figure 5 relates the program's organizational structure to its activities and the 1985-86 resources required.

Figure 5: Resources by Organization and Activity ($000)

						Activity Total
Production 433 P-Y	20,763	11,357		6,025		38,145
Distribution 228 P-Y			12,482	1,500		13,982
Research and Development 10 P-Y				1,191		1,191
Administration 118 P-Y				75	8,287	8,362
	20,763	11,357	12,482	8,791	8,287	61,680

5. Mode of Operation

Activities of the Program are carried out through a revolving fund to which all disbursements are charged and to which are credited all revenues received and the appropriation drawn for program expenditures.

Revenue credited to the fund results mostly from the production of films for other government departments; sales of films and videocassettes both to government departments and the private sector; and the rentals of films and sales of television and theatrical rights. All charges for services provided are at cost, except for film rentals and sales of prints to the public which are based on market prices.

Detail of these revenues is shown on page 45.

D. Planning Perspective

1. Environment

The nature of the Board's endeavours and objectives requires it to be responsive through film and video to social change and current issues, as well as to changing public needs in a rapidly developing communications industry. Two of the factors that influence the manner in which it will fulfill its stated objective are the National Film and Video Policy and economic conditions.

Film Policy: The most significant factor that will affect the operations and direction of the National Film Board is the National Film and Video Policy announced by the Minister of Communications in May, 1984.

This policy defines a new, more focussed and potentially more effective role for the NFB to complement that of the private sector. With this new role, the NFB is expected to become:

- a world-class centre of excellence in film and video productions, and
- a national centre for advanced research, development and training in the art and technology of film and video.

The implementation of this new role will involve a thorough reorganization, restructuring and reallocation of activities. A five-year implementation plan which involves significant changes in the production and distribution area, including staff reduction, is being prepared. Through this restructuring of its activities, the NFB is expected to free-up $10 million dollars, for reallocation in its operational budget to support production, communication with the public, as well as the Board's enhanced research, development and training activities. Most of these resources will be freed as a result of staff reductions over a five-year period. A new National Film Act will also have to be prepared to reflect the revised mandate of the Board. Details on the implementation plan relating to the Estimates' year are shown on page 19 under Initiatives.

Economic Conditions: The effects of scarcity of resources that have been felt in recent years are expected to last during the forecast period as the search for government-wide economies continue. The emphasis will be placed on finding more economical ways of carrying out our program while implementing the new role that the National Film and Video Policy has defined for the NFB.

To achieve our planned initiatives for 1985-86, we intend to continue our strategy of gradual reallocation of freed resources into the operational budget to support production, communication with the public, as well as research, development and training activities.

2. New and Continuing Initiatives

In keeping with its role of becoming a centre of excellence in film and video production, and a national training centre for research, development and training in the art and technology of film and video, the NFB is undertaking the following major initiatives in 1985-86.

- Integration of research, communication and promotion functions with those of programming and production activities. The aim of this initiative is to assure that the NFB products and services are more reactive to our audiences' needs. This will involve the transfer of some professionals and related financial resources from the Distribution to Production Activity (see page 29).

- Increased participation by freelancers in NFB film production. To better fulfill our mandate we must have access to the most talented filmmakers. While retaining a core of permanent directors who will both make films and be involved in the NFB training program, the Board will invite talented filmmakers from the private sector to work under contract within its various production programs. By 1989-90, 70% of films produced will be done by freelancers under the responsibility of NFB producers. The financing of this initiatives will be done through reallocation of existing resources (see page 29).

- Establishment of a continuous research program dealing with:

  - **Society and Markets** : to assure a link between our products, the social and cultural environment and our constituencies. This research will inform the institutional programming process by means of market development studies. In terms of communication with the public, it will analyze reaction to both content and formal expression and consider the methods and technologies used to deliver the product to audiences. The findings of such research will serve to evaluate the social and cultural relevance of our product in terms of its content, format and delivery system. The cost of this initiative for the next five years is estimated at $2,000,000 with planned expenditure of $400,000 in 1985-86.

  - **New Audiovisual Technologies** : to foster innovation in both picture and sound, and participate in the evolution of the electronic and computerized image, as well as that of the different media, technologies and systems. The budget for this initiative has been set at $400,000 annually (see page 37).

- Creation of a training capacity within the NFB in order to offer high quality training to talented aspiring filmmakers and technicians. For 1985-86 we plan to dedicate $200,000 to this initiative (see page 29).

- Reorganization of the film distribution services. During 1985-86 the NFB will undertake the gradual consolidation of its present Canadian film library system consisting of 29 offices into 12 audio-visual centres, one by province, except for Quebec and Ontario which will have two centres respectively. The goal is to achieve this consolidation within a five year period (see page 34).

- Turning the international distribution activities into a cost recovery operation. In a restructured organization with a limited staff, our goal is to focus on the marketing and sales of our products (see page 35).

3. Program Effectiveness

The NFB was established to initiate and promote films in the national interest and provide a cultural interpretation and presentation of Canada through the medium of film and other audio-visual materials. In addition to the widespread acclaim attributed to its cinematic achievements both in Canada and abroad the Board plays a major role in the development of the Canadian film industry. Also, it encourages discussion and debate about major social and cultural interests through the medium of film.

During 1984-85 a formal program evaluation function was introduced. As this function matures, the Board expects to be able to report more comprehensively the effectiveness of its operations.

Meanwhile, the following tables give an overview of the program performance. Information is provided on the number of films produced and their actual usage as well as statistical data on the production and distribution activities of the past four years.

Figure 6 : Films and Other Audio-visual Products as per Annual Reports

	1983-84	1982-83	1981-82	1980-81
Original films	105	84	81	89
Versions and adaptations of films	70	75	69	82
Total film products	175	159	150	171
Original videos	12	4	-	-
Adaptations of videos	12	17	-	-
Multi-media products	49	55	56	62
Film clips and vignettes	32	25	24	51
Total	280	260	230	284

The number of original films and versions produced in both official languages during this period relates to our objective of depicting and interpreting both the English and French cultures of our country and is shown in Figure 7.

Figure 7: Annual Production of Original Films and Versions

	1983-84	1982-83	1981-82	1980-81
English language	76	64	79	67
French language	79	58	39	51
Bilingual and foreign	20	37	32	53
Total	175	159	150	171

Data shown in Figure 8 is an indication of the Canadian distribution performance.

Figure 8: Canadian Distribution Statistics

	1983-84	1982-83	1981-82	1980-81
Number of copies loaned to non-theatrical markets (schools, film libraries, etc.)	531,308	526,008	511,522	486,967
Number of prints sold	10,549	9,405	10,034	6,859
Number of telecast hours	4,877	3,864	3,164	3,653
Number of film telecasts	10,361	8,705	8,454	9,928

Since international distribution works mainly through distributors we believe that revenue derived from print sales and television rights gives a useful indication of the level of performance in this area.

Figure 9: International Distribution Revenue ($000)

	1983-84	1982-83	1981-82	1980-81
Theatrical market	199	204	112	100
Institutional market	1,678	1,760	1,736	1,575
Television market	843	607	591	423
Total	2,720	2,571	2,439	2,098

Figure 10 shows the trend in aggregate audience reached in Canada through the various distribution methods in use. It is determined by using the average audience figure times the number of outputs for each distribution method. The average audience figure was verified by audit in October 1984.

Figure 10: Canadian Aggregate Audience by Distribution Channel

	1983-84	1982-83	1981-82
Cumulative Audience reached through:			
Prints loaned by regional film libraries	29,487,594	29,193,444	28,389,471
Sales of films and video-cassettes	30,362,940	30,755,214	31,821,480
Film Telecasts	270,810,195	227,522,585	220,962,198
Theatrical presentations	432,720	514,658	2,236,790
	331,093,449	287,985,901	283,409,939

In 1983-84, the NFB produced 280 films, videos, versions and audio-visual material of a diversified nature to meet the specialized film needs of the Canadian public. These productions depict the Canadian reality in all parts of the country and deal with such subject matters as social change, family relations, the economy and women's issues. Additionally, there were a large number of productions intended for children, films on or for the Third World, and in collaboration with the private sector some feature length fiction films. One hundred and seven productions were translated either into French, into English or into foreign languages in order to reach the largest possible audience.

The NFB continued to make an impact on television and many of its films were popular with the public as evidenced by the following statistics on the CBC network.

	Number of viewers
"The War Series" (average for each of the seven periods)	1,022,000
"If You Love This Planet"	1,563,000
"The Children's Crusade"	477,000
"See You in the Funny Papers"	398,000

On the French network "Radio-Canada" the following films attracted considerable attention.

	Number of viewers
"Comme en Californie"	679,000
"La Quarantaine"	663,000
"Si cette planète vous tient à coeur"	418,000
"Massabelle"	318,000

Films televised by Radio-Quebec, Ontario TV and Educational T.V. in British Columbia, accounted for 1,300 telecasts. Canadian Pay-TV channels have also purchased fifty new titles of our films.

There was also theatrical distribution of our films, among which the most popular were "Les enfants des normes - Post Scriptum", "Plus jamais d'Hibakusha", "Attention: Women at Work" and "Home Feeling: A Struggle for a Community".

The quality of NFB productions received wide praise in Canada and abroad. During the year, 59 films gathered 92 awards at festivals. The highlight of the year was an Oscar for "If You Love This Planet". Another film, "The Kid Who Couldn't Miss", won a prestigious Silver Award at the Annual Chicago Festival.

The Los Angeles office, which is responsible for promoting the Canadian film industry in the United States, has been very successful from an economic standpoint. It has helped to inject an estimated 54 million dollars into film production in Canada.

Section II
Analysis by Activity

A. Production of Films and Other Visual Materials

Objective

To produce culturally and socially relevant films of high quality in the public interest which can be used as instruments of social change.

Resource Summary

Expenditures for this Activity will account for 59% of the Board's program expenditures and 55% of the authorized person-years. Of the total expenditures 53% is for personnel costs. Other significant items of expenditures include professional and special services, film stock and supplies, transportation and communications and accommodation costs.

Film production undertaken for other government departments, or co-sponsored with the private sector, estimated at $3,000,000 is the main source of revenue for this Activity and represents 7% of the gross Activity expenditures.

Figure 11: Net Cost of Activity ($000) and Person-years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
In house film production						
Expenses	41,145	260	39,516	274	37,150	330
Revenues	(3,000)		(3,830)		(3,438)	
Contracted film production(1)						
Expenses			2,500	-	6,281	-
Revenues			(2,500)		(6,281)	
Still Photography (1)						
Expenses			2,497	65	4,457	70
Revenues			(1,730)		(3,841)	
Technical Services (2)	-	173	-	184	-	197
Total expenses	41,145		44,513		47,888	
Total revenues	(3,000)		(8,060)		(13,560)	
Net cost of activity	38,145	433	36,453	523	34,328	597

(1) It should be noted that in 1985-86 no resources are associated with Contracted film production and Still Photography. Pursuant to the National Film and Video Policy, the Contracted film production carried out by the Sponsor Program Division was transferred to the Department of Supply and Services; the Canadian Government Photo Centre was transferred to the Department of Supply and Services and the Stills Photo Collection to the National Museums of Canada.

(2) Only the person-years required to operate the technical services are charged to the Production Activity. The financial resources are charged to the Activity for whom the work is performed.

Past Financial Performance

Figure 12: 1983-84 Financial Performance ($000)

	1983-84				
	Actual				
	Revenue	Expenses	Excess Expenses	Main Estimates	**Change**
In house film production	3,438	37,150	33,712	32,670	**1,042**
Contracted film production	6,281	6,281	-	-	-
Still Photography	3,841	4,457	616	975	**(359)**
	13,560	47,888	34,328	33,645	**683**
Person-years			597	675	**(78)**

Explanation of Change: The main factors that contributed to the change from the Main Estimates of $683,000 or 2% are as follows:

	($000)
• an increase in in-house film production expenses due mainly to the cost of severance pay and retirement indemnity payments resulting from the implementation of the staff reduction plan	1,300
• an increase of $1.8 million in both revenues and expenses for Contracted film production due to a larger volume of orders received from other government departments for the production of audio-visual materials	-
• an offsetting increase in revenue earned of	(600)

Description

This Activity consists of the following sub-activities:

In-House Film Production: includes the English and French Production Divisions which undertake the production or co-production of films, filmstrips and slide sets in accordance with the Board's mandate. The divisions must also plan and carry out research, development and training projects in the area of film and audio-visual material. Consequently, each division consists of a management team which is responsible for planning and co-ordinating its activities and managing its resources as well as the production studios that carry out the program.

Film production is carried out both at Montreal headquarters and in six regional production centres (see locations page 48). Regional production centres offer an opportunity for the NFB to contract with local filmmakers hired because of their particular knowledge of the community. Approximately 30% of the Board's film production activity is effected through these centres.

Technical Services: provides a variety of services and advice primarily to the film production and distribution activities of the Board as well as to other government departments and organizations as required. Included among the functions performed are laboratory processing, camera, sound recording and projection facilities, animation photography, titling, visual effects and other services. It should be noted that for practical purposes the person-years required to operate technical services are part of the Production Activity while the financial resources are fully charged to the Activity for whom the work is performed. Depending on the nature of the service, charges are made according to rates established on a footage or an hourly basis.

Performance Information/Resource Justification

In 1985-86, it is planned to merge the marketing and promotion functions within the Production Activity. It is felt that combining these two functions will favour the attainment of production objectives with no increase in resources required.

It is also planned to commence the implementation of the National Film and Video Policy by:

- granting a much larger portion of film production program to freelancers everywhere in the country;
- expanding participation in the area of experimental film techniques, such as Imax, Omnimax and Video technology; and
- investing $200,000 in a training program concerned with all areas of filmmaking for talented aspiring filmmakers and technicians.

Priorities Areas: The English and French production divisions, while maintaining flexibility and room for creativity in production, will invest their resources according to the following priorities:

- the Canadian Perspective on National Issues - The purpose of this program component is to undertake films or series of films which provide Canadians with analytical documents on fundamental questions facing our society emphasizing the Canadian point of view. These films are intended to inform and stimulate public debate and discussion.
- Women's Production - Films in this category will deal with women's history, women writers, women and health, women and justice and will provide a feminine perspective on major social issues.
- International - Films produced within this category will deal with Canadian awareness of international issues, international awareness of Canadian culture, and the assistance program in audio-visual communications.
- Arts, Literature, History - Films about Canadian society and culture. These films will focus on Canadian authors, artists and their works and some will be specifically designed to reach Canadian youth in their schools and homes.
- General - Funds allocated to this category will be used for films which are creator-impelled and for unique or experimental ideas and special events which surface during the year.

- Animation - In French production a major program in computerized animation is in progress. It will be open to English and French animators and designed for reseach and to expand computer animation in filmmaking.

Figures 13 and 14 show the priority areas identified through market research and consulting process as well as the allocation of funds to other production requirements.

Figure 13: English Production Financial Resource Allocation ($000)

Priority Areas	Forecast 1985-86	Forecast 1984-85

B. Distribution of Films and Other Visual Materials

Objective

The principal objective of this Activity is to market and distribute NFB products in both official languages throughout Canada and in other countries where this is justified by the market and by government policies.

Resource Summary

Expenditures for this Activity will account for 27.3% of the total program expenditures and 29% of the authorized person-years. Of the total expenditures 47% is for personnel costs. Other costs are primarily for film prints, promotion of films, travel and communication expenses and accomodation costs.

Revenue estimated at $5,050,000 represents 27% of the gross Activity expenses. It is derived from sales of film and video prints as well as sales of television, theatrical and non-theatrical rights; and of various distribution services.

Figure 17: Net Cost of Activity ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Canadian distribution	13,182	164	15,307	187	13,758	195
International distribution	2,900	31	4,289	44	3,978	49
Administration and promotion Services	2,950	33	2,957	36	2,652	53

Revenue - Canada	2,600		4,540		4,319	
- Foreign	2,450		2,400		2,748	
Total revenue	5,050		6,940		7,067	
Net Cost of Activity	13,982	228	15,613	267	13,321	297

Past Financial Performance

Figure 18: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Canadian Distribution	15,815	237	16,128	242	(313)	(5)
International Distribution	4,573	60	5,542	61	(969)	(1)
Total expenditures	20,388	297	21,670	303	(1,282)	(6)
Revenue	7,067		6,700		367	
Net cost of activity	13,321	297	14,970	303	(1,649)	(6)

Explanation of change: The net decrease in financial requirements of $1,649,000 or 11% was caused mainly by a reduction of $1,000,000 to cover our contribution to the Social Development Policy reserve and by an increase of 5% in Distribution revenue.

Description

The primary role of Distribution is to provide the Canadian public and audiences abroad with maximum access to National Film Board productions as well as to a selection of films sponsored by government departments. This is done on both a commercial and non-commercial basis, through the direct sale, rental and loan of prints and cassettes, and bookings to cinemas and television. Agreements are also signed with distribution companies, agents, and other outside organizations to provide certain distribution services on behalf of the Board.

The Distribution Activity conducts research and market studies on the needs and reactions of the public in order to better plan production and dissemination programs to reach audiences more effectively.

Canadian Distribution : In Canada, the public gains access to our productions through a number of activities carried out in English and French. These services include market testing and audience research, first tier release, dissemination through an existing mechanical system and other distribution functions involving promotion, publicity and audiovisual utilization activities.

The Distribution Activity operates a regional film library network of 29 audio-visual centres which loan films and videocassettes to organizations, groups, and individuals. Locations of these offices are listed on page 48.
